Its handling is stable and relatively agile. Inside is a quiet, roomy, comfortable and technologically sophisticated cabin. This second-generation Durango is big. Its exterior dimensions place it between the Chevy Tahoe and Ford Expedition in size, but it benefits greatly from a space-efficient design. Folding down the seats reveals more than cubic feet of cargo space. You can slide full-size sheets of plywood in back. And a properly equipped Durango with the Hemi engine is rated to tow up to 8, pounds. Two V8s are available and both are superb. The base model has been dropped for , so the Durango SXT is the entry level for the Durango line-up. For the optional 5. For , dual stage front air bags and an occupant-sensing system for the passenger-side front air bag are standard. Curtain airbags and electronic stability control are available as options. Lineup The Dodge Durango is offered in four models: Each is available with two-wheel drive or four-wheel drive. Adventurer models come with tubular side steps, reversible slush mats, rubberized washable cargo liner with built-in rear cargo organizer, and unique machine-finished wheels. The Adventurer is equipped with a Thule roof rack with a choice of six rack systems or an Adventurer accessory kit. The subtle mineral gray side molding and front and rear fascias distinguish the Adventurer. Safety features include optional curtain air bags with roll-over sensors added for , and we recommend them highly for the head protection they can provide to occupants in a side impact or rollover accident. Side-impact air bags are not available. The advanced front air bags deploy with varying power based on the weight of the person in the seat. Electronic stability control and traction control to minimize wheelspin and skids are optional.

Find Used Boldly styled, the Dodge Durango is big and powerful, but surprisingly refined. Its handling is stable and relatively agile. Electronic stability control and traction control to minimize wheelspin and skids are optional. Government NHTSA crash tests resulted in a five-star frontal crash test rating the best rating Walkaround Dodge Durango offers an imposing presence in rearview mirrors with its big crosshair grille and shotgun headlights that have become a Dodge signature. The Durango takes styling cues from the Dodge Power Wagon. The short hood and flared fenders give the Durango the look of a big-rig truck. That short hood leads into a steeply raked windshield and sloping roof. The front fenders make the hood look as narrow as it is short. The windshield is aerodynamically efficient and offers good visibility. The roofline slopes briefly downward at the rear, and the liftgate window curves in to meet it. This reduces that boxy look common on so many SUVs and minivans. The sheet metal is molded around them to suggest speed. Chrysler has an expensive new wind tunnel at its headquarters in Auburn Hills, Michigan, and it was used extensively when designing the second-generation Durango to reduce wind noise. The aerodynamics are fine-tuned, including the contours of the exterior mirrors, and the subtle ducktail at the trailing edge of the hood under the wipers that minimizes wind noise over the windshield. The motor mounts were calibrated to reduce the frequencies and harmonics of each engine. The windows have an extra layer of lamination to deaden sound. Foam is injected into many of the body and chassis crannies, which would otherwise serve as tiny echo chambers. Interior Features The Dodge Durango feels spacious inside. Large amounts of glass contribute to that feeling along with lots of cargo space. Behind the second row of seats is 68 cubic feet of cargo space, equal to the total for many SUVs. The distance between the wheel housings is 48 inches, so full-size sheets of plywood can be loaded flat. Speaking of loading cargo, this task is aided by the liftgate, which opens very easily. A power liftgate is available on Durango models, a handy feature. Also, the cargo floor is relatively low, thanks to the rear suspension design. The second and third rows are notably easy to access because the rear doors open an exceptionally wide 84 degrees. The second-row seat easily flips forward with the touch of one hand, and the seatback flops flat just as easily. This is no small virtue. The second-row seats recline and have their own climate control, so back-seat passengers can snooze in comfort. Details are carefully thought out, including convenient grab handles cleverly molded into the stubby rear leg of the second-row seat, which ease climbing back to the third row. Once back there, a small bubble in the ceiling provides additional headroom for third-row passengers. The front seats are comfortable, neither too soft nor too firm, and the four-spoke steering wheel is nice. The SLT has orange-hued wood trim, while the

Limited presents a cleaner look with its brushed aluminum. And that trim is real wood and real aluminum, not plastic. Instrumentation is clean, handsome, easy to read and easy to operate. We especially like the simple black-on-white gauges and rectangular black Venetian-blind style heating and cooling vents. The center console is deep, under a removable tray. Forward of that is another important compartment designed to serve as a fast-food bin. Two integrated cup holders with removable neoprene for different sizes of drink containers are provided. And we welcome the availability of seat heaters. Driving Impressions With its size and refinement, the Dodge Durango can be a good compromise between the medium and extra-large SUVs available from other manufacturers. In our tests of variable displacement on other Chrysler products, we found the transition between cruising and power modes was nearly indiscernible. The Hemi seems like a good value. Plus, it can tow up to 8,000 pounds with the optional 3.7L Chrysler modernized the basic design in after it had been gone but not forgotten for decades. The double overhead-cam, 5.7L We were most impressed by the five-speed automatic transmission that comes with both V8 engines. The shifts were incredibly smooth. Shifting up or down between third and fourth gears is undetectable. The best fuel economy goes to the 3.7L. It comes with a four-speed automatic and is rated to pull a 7,000 pound trailer. The Durango has good brakes. ABS helps the driver maintain steering control by eliminating wheel lockup, while electronic brake-force distribution EBD balances braking forces front and rear for more stable stopping. We slammed on the brakes several times from 70 mph and found the Durango stopped steady and true. The current Durango represented a clean-sheet design when it was introduced as a model, with nothing borrowed from the Ram pickup as before. New manufacturing processes resulted in a more rigid chassis, which benefits from hydroformed boxed frame rails, a new independent front suspension and innovative adaptation of a Watts link rear suspension with coil springs. Cornering and handling are excellent, maybe even superb, for a big SUV. The ride quality is quite good, way better than the old Durango. The rack-and-pinion steering provides a We found the Durango offered good, responsive handling over more than miles of remote twi Summary Dodge Durango is smooth and powerful with either of the two V8 engines. It rides well and handles especially well, and has excellent engineering touches and details. Its pricing represents a good value. Model Line Overview Model lineup:
