The US/BNA Postage Stamp Catalog is a MUST have for any beginning collector. It has helped me correctly identify many of my early American stamps and takes the guess work out of were to add stamps to your album.

Indeed, ownership of or ready access to a catalog may be the dividing line between the tens of thousands of stamp collectors in the United States and the purported millions of stamp accumulators. You can buy stamps at the post office or from dealers. You can clip them from the covers you receive in the mail. You can arrange them artistically on notebook paper. But without a catalog, you will never be more than just an accumulator, because you lack the basic tool to become a collector. The two basic functions of a catalog are to enable the identification and valuation of your stamps. Armed with this tool you move from the lowly larval accumulator stage to a full-fledged, dewy-winged stamp collector. The great majority of stamp collectors in the United States collect U. There are a number of U. In the beginning there was John Walter Scott. Scott was an English immigrant who published his first monthly stamp price list in New York City in His lists gradually evolved into a catalog that numbered and listed all stamps known to exist, not just the ones he had for sale. This direct ancestor of the present-day Scott standard catalog series covered the world, including revenues, locals and postal stationery in 52 pages. In , Scott prices were retail values. The firm would actually sell you the stamps for the prices listed. When it comes to catalog values listed in Scott or any other catalog, collectors must understand that condition and demand are crucial. Collectors who do not read and heed "Information on Catalogue Values, Grade and Condition" in the introduction to the Scott catalogs will come to grief. Dealers usually base what they will pay for stamps for their inventory on a percentage of catalog value. Collectors who think that dealers should pay them something near catalog value for their common stamps are in for a sad awakening. Dealers must be able to make a profit in order to stay in business. They are bought and sold in bulk. Today, the vast majority of collectors in the United States still use one of several versions of the Scott catalog as the standard reference for identifying and valuing U. Therefore, the United States is always in the first Scott volume. Some catalog systems list all postage stamps in chronological order, but the Scott system groups the stamps according to the postal duty or function they are intended to provide. Other types of stamps are often referred to as "back-of-the-book" because they are listed separately after the regular postage stamps. In order, the Scott U. Scott also lists postal stationery and revenue and hunting permit duck stamps. Each major stamp variety is given a Scott catalog number, which is the standard numbering system in use throughout the United States. Originally, Scott did not assign catalog numbers to the listed stamps. The 48th edition published circa was the first in which catalog numbers were assigned. A page from an early Scott catalog before numbers were assigned is shown in Figure 2. The numbering system in use today was first introduced in Stamps are identified by year issued, denomination design, color, watermark and perforation. Every stamp design is shown in black and white. Magnified portions of stamp designs are shown for look-alike varieties. Stamps are valued mint and used. S Pocket Stamp Catalogue. This is a less-detailed version of the same information in the Scott standard catalog. It does not list postal stationery. Its advantages are low cost, portability and color illustrations. First issued in , the Scott U. It also gives additional pricing information on earlier stamps, such as on cover, with various cancels, color varieties, blocks-of-four, margin blocks-of-four and plate number strips. Figure 3 shows the Scott U. Some collectors get their U. It is pictured in Figure 4, bottom left. The Postal Service catalog is not an independent production. Another catalog possibility for collectors of U. Brookman lists all categories of postage stamps as well as revenue stamps, postal stationery, booklets, state and federal hunting permit and Indian reservation stamps, first-day covers, souvenir cards and pages and U. Brookman can be used for stamp identification, but, in a world where many dealers and collectors buy and sell on a percentage of Scott value, its pricing information might be a handicap, unless you are buying your stamps

primarily from Brookman. Many schoolboy collectors of the s and s began their love of stamps with the H. The Harris catalog was an affordable alternative when Scott products seemed beyond the reach of a stamp collecting budget dependent on mowing lawns and sacking groceries. The Harris catalog uses the Scott numbering system through a licensing agreement with Amos Press. You can order the stamps at the prices listed from H. The most economical U. It is free for the asking from Mystic Stamp Co. The Scott numbering system is used, and the stamps are sold at the prices listed. A drawback is that it lacks extensive aids to distinguish between look-alike stamps. Krause-Minkus came about when hobby publisher Krause bought the moribund Minkus catalog and album line. The Krause-Minkus catalog lists all U. All stamp designs are illustrated in black and white, and there are extensive stamp identification aids. The major drawback is that Krause-Minkus uses its own numbering and valuing system. Operating with the Krause-Minkus catalog in a market dominated by Scott is like staying in a hotel where everyone else speaks only Romanian, although Krause offers a number cross reference. When you buy a new one, give your old one to a stamp accumulator and help him make the transition to stamp collector.
