

1: Harley Electra Street Glide Road King Service Repair Manual | www.enganchecubano.com

The motorcycle is equipped with Electronic Throttle Control (ETC). Instead of using a mechanical cable connection to the throttle body, this technology uses redundant grip sensors to indicate rider requested throttle position to the Electronic Control Module (ECM).

Wow, when you do so, it really pops and is so gorgeous! Looking at it on the Harley Davidson website or while it is sitting inside a dealership simply does not do the color justice. There is also an integrated oil cooler. This cu in V-Twin now comes stock with the cam kit already installed. The cam offers substantial increase in low-end torque. I have been very impressed with the performance of this motor and it is a runner for sure. It is awesome to have that extra power at take off and when passing for certain. This bike really gets up and goes and feels extremely smooth. The Street Glide Special comes stock with a hydraulic clutch, 6 speed Cruise Drive transmission, of course the 6 gallon fuel tank, and the bike weighs in at lbs. The tires handle well and you can drag floorboards all day long around corners! I also wrote a very informational article on the lack of MAC support for the new Boom Box Infotainment System and how the download updates work. The display features odometer, trip A, trip B, range to empty, and gear indicator. All the gauges are beautifully backlit. On the left handlebar controls on top is a trigger switch odometer, trip A, trip B, and range to empty. Also on the left handlebar controls is a switch to operate voice commands via a bluetooth headset to the Boom Box Infotainment System. The cruise control is now solely operated by a joystick and has been moved to the left handlebar controls. Now you can rock the throttle back with your right hand and set the cruise with your left. This was a very nice change. On the right handlebar controls is an information switch to display ambient temperature, oil pressure and whether your engine idle temperature management system EITMS is enabled. These are all new ergonomic hand controls and include joysticks on each side to control all the functions of the Boom Box Infotainment System and cruise control. I can tell you that everything to operate the electronics is right at your fingertips and feels great! The inside of the fairing is beautiful on the Street Glide Special and is painted in an eye catching gloss black finish. This really completes the inside of fairing and makes it stand out. You can close the vent by a large button on the upper left inside of the fairing. This new vent is placed there to reduce head buffering, which it does. Essentially the air rushes through the fairing vent and shoots a wall of air straight up in front of you in order to slow the oncoming air. This is my assessment of how it operates. The only time I can see that I would close the vent is during extremely heavy rains or hail. I have opened it and closed on very cold mornings and nights and it does not seem to matter. The only downfall to the new fairing vent is that you can now not install inside fairing storage pouches on your dash, as it would block the wind tunnel, but I believe the trade off is well worth it. Essentially in an emergency stop, not only do the ABS brakes kick in, but if you apply too much front or rear brakes, the sensors within recognize this problem and even out the braking pressures. This all results in very quick braking in an emergency. The beautiful thing is that the linked braking system does not kick in until mph. This is super important for motorcycle law enforcement officers, who do a lot of low speed aggressive maneuvers and have to use the rear brake a lot while doing so. On other brands of bikes that had similar linked type brakes, they activated even at very low speeds, making the slow speed maneuvers much more difficult for the police motorcycle officer. This of course goes for anyone who practices or knows how to perform aggressive slow speed maneuvers. Harley Davidson really thought this one out! A few other things worth mentioning are the restyled hard saddle bags with a one touch design latch, dual halogen headlight, 49 mm telescopic front forks, stiffer triple clamps, larger steering bearings, low profile front fender, Jukebox media compartment with a USB connection and one touch access door, and of course the Harley Davidson Factory Security System with hands free security fob. All these additions and changes have made an awesome riding Harley Davidson Street Glide Special. The bike is tight, smooth, fast, and powerful. It corners like a dream and it is even hard to tell how fast you are going unless looking at the speedometer. That is how smooth this bike runs. The audio system sounds great and can be heard fine, even at freeway speeds. The only thing I did to the bike is have the fuel injection remapped and replaced the stock mufflers with Vance and Hines Dresser Twin Slash Rounds slip on mufflers. I will likely

put a different air intake on the bike at some point, but I am still trying to decide which one. Other than that I will leave the bike as it is. Just when you think there is nothing more Harley Davidson can do to make their bikes even better, they knock it out of the park! Well done Harley Davidson and you should be very proud of this bike! We will be discussing this bike on an upcoming episode. What are you waiting for? Come join the Law Abiding Biker Community and get involved!

Harley-Davidson Touring Owner's Manual Download Harley-Davidson Touring Owner's Manual for models: - Street Glide® Special - Street Glide®.

Be sure to locate and follow the procedures that apply to the motorcycle receiving the new guard. For Models without Lower Fairings 1. Proceed to For All Models section. Remove the lower fairings following the instructions in the appropriate Service Manual. When the lower fairings have been removed, proceed to For All Models section. Remove the two black screws 1 that attach the fairing cap 2 to the lower fairing 5. Set the parts aside for re-installation. Remove the screw 7 , rubber washer 8 and locknut 10 and the clamp 9 that attaches the bottom of the lower fairing to the engine guard and set aside. Remove the two locknuts 3 , U-bolt 6 and U-bolt retainer 4. Remove the lower fairing by sliding it out from behind the engine guard. Repeat Steps 1 through 4 for the opposite side. Disconnect the battery, negative - battery cable first, following the instructions in the appropriate Service Manual. Remove the seat following the instructions in the appropriate Service Manual. Remove the cable strap holding the clutch cable to the engine guard. Hold the engine guard in position, and loosely fasten the top of the guard with the new hex socket screw and flat washer from the kit. Install the bottom brackets to the motorcycle frame with the two new TORX screws and locknuts. Tighten all three screws to ft-lbs Install the lower fairings following the instructions in the appropriate Service Manual. Carefully place one lower fairing in position from behind the engine guard. Install the lower fairing to the top of the new engine guard with the U-bolt 6 from the back, through the holes at the top of the fairing. Install the retainer 4 in position on the U-bolt and secure to the engine guard with the two locknuts 3. Do not tighten the locknuts at this time. Attach the bottom of the fairing to the engine guard with the clamp 9 removed earlier. Install the clamp around the engine guard in the direction shown, with the tabs toward the rear of the vehicle and the flat side of the clamp against the lower fairing. Insert the screw 7 through the lower fairing, rubber washer 8 and clamp 9. Secure the assembly with the locknut Tighten to 12 ft-lbs
