*Most Popular House Plans. Looking for a home design with a proven track record? Start with our most popular house plans. These home plans have struck a chord with other home buyers and are represented by all of our house plan styles.*

Gizmag doffs its cap to 10 recent architectural examples of utilizing space to its utmost potential, from tiny micro-homes on wheels that resemble large sheds, to slightly larger brick-and-mortar houses sporting ingeniously flexible interior layouts. One thing they all have in common though, is an distinct effort to make the most of what space is available. The Diogene Micro Home measures just 7. The small dwelling sports a living area, with folding desk and chair, a sofa bed and kitchen unit with built-in sink and a refrigerator. Solar panels, rainwater collection, and filtration services have also been added for good measure. The Diogene Micro Home is currently undergoing testing and is expected to be available in Though difficult to verify, the "narrowest" claim is certainly plausible, as the entire home was built within a former alley. The Keret House measures just cm 48 in at its widest interior point, and 72 cm 28 in at its narrowest. Probably not the best location to host a soiree then, but Centrala Architects still managed to squeeze in a serviceable kitchen, dining room, WC and shower room, in addition to a bedroom with single bed. This was necessary as the ceiling height of 3. Therefore, the designers fitted a bed area over the main wardrobe, which is accessible via a small wooden staircase. The kitchen and dining area are also combined into one, and a blind door was also fitted to a spare wall, in a bid to increase the feeling of space. The apartment was completed in However, this fact belies some serious under-the-hood innovation that just might revolutionize tiny home building. The innovation in question revolves around fungi, of the mycelium mushroom root variety. This mycelium was used by Ecovative Design as a basis for a new insulation material, used in the construction of the Mushroom Tiny House. It works just like the usual bog-standard insulation, except contains no harmful toxins and is environmentally-friendly to grow. Erected in just a day, the mostly wood-based residence is built using sustainably-sourced timber, and measures a total of 27 sq m sq ft. The interior layout is based around three interior spaces, which comprise a lounge and kitchen space, a bathroom, and a generous bedroom. The home can be transported via truck. Finnish micro house Another small and arguably impractical home? Well, yes, but the Finnish micro house by designer Robin Falck has an ace up its sleeve. The home is so small that it can be built without a permit in its native country of Finland. Finnish authorities allow structures smaller than either 8. The single story plus loft property is asymmetric, making for a challenging palette for Anonymous Architects when designing the interior, but the firm used folding furniture and partitions to help impart a feeling of there being more space than there actually is. Further to this, the NOMAD Micro Home will be sold in flat-pack form, can operate on or off-grid, promises to be easy-to-build, and features a living area, kitchen, bathroom, and upstairs sleeping area as standard. Designed by students from SCI-Arc and Caltech for the Solar Decathlon competition, the futuristic house not only operates off-grid, but also handily expands in size to increase the useable interior space from 55 sq m to almost sq m , sq ft by utilizing a system of rails. The house contains two bedrooms, a living room, and a multipurpose space, in addition to a kitchen and bathroom. Sustainable tech slated for the house includes a solar hot water tank, solar panels, and an energy monitoring system. Tetsuo Kondo Architects built the one-room property for a young couple and their two children. Well, mostly one room anyway, as there appears to be some partitioned sections added for the sake of privacy. Naturally, this common layout has some drawbacks but what the family lost in privacy, it gained in shared space. The interior offers a degree of personal space by being arranged in box shapes, with a mezzanine also going some way to impart a greater sense of separation. That rounds out our top ten recent examples of micro homes.

### 2: Small House Plans - Architectural Designs

*" Most Popular Home Plans" is an encyclopedic collection of of the most popular homes of all styles and sizes. The extensive variety of homes presented in this collection offer a superior selection from which to choose.*

Important Information Banner Elk is one of our most popular plans. It is an open floor plan with a wraparound porch, walkout basement and first floor master suite. This version of our Banner Elk is slightly larger than the first version and has other minor improvements. French doors in the master grant access to the back porch. The foyer views extend to the rear of the house and it has a loft above that provides views to the family room and out the rear windows. The wraparound porch provides plenty of porch space to enjoy the views of your lot and the walkout basement allows for easy access to the lake. The basement features a recreation room, game room, and wet bar. This house plan can be built with either a 2-car garage and can be modified to fit your families needs. Each set of plans includes: All elevations include notes, dimensions, and recommended materials. Floor Plans Complete dimensioned and detailed Floor Plans. Foundation Plan Roof Plan Notes: Floor Plans and Elevations depicted may vary slightly from website depictions. Over time, we make plan improvements that may not be updated on the site immediately. Square Footage is typically calculated using heated Square Footage on the main and upper levels. Stairs are counted once. Two story open areas and vaulted spaces are not included in Square Foot totals. Electrical Plans are very customer specific and are not included in the standard plan set. The types of lights, switches, and where they are located vary with each customer. An on site meeting with the builder and electrician after the house is framed is the easiest way to make good decisions regarding electrical. No refunds or exchanges can be given once your order has started the fulfillment process. All house plans from maxhouseplans are designed to conform to the local codes when and where the original house was constructed. In addition to the house plans you order, you may also need a site plan that shows where the house is going to be located on the property. You might also need beams sized to accommodate roof loads specific to your region. Your home builder can usually help you with this. Many areas now have area-specific energy codes that also have to be followed. This normally involves filling out a simple form providing documentation that your house plans are in compliance. In some regions, there is a second step you will need to take to insure your house plans are in compliance with local codes. Some areas of North America have very strict engineering requirements. New York, New Jersey, Nevada, and parts of Illinois require review by a local professional as well as some other areas. If you are building in these areas, it is most likely you will need to hire a state licensed structural engineer to analyze the design and provide additional drawings and calculations required by your building department. Additionally, stock plans do not have a professional stamp attached. If your building department requires one, they will only accept a stamp from a professional licensed in the state where you plan to build. In this case, you will need to take your house plans to a local engineer or architect for review and stamping.
