The answer is We assume you are converting between millimetre and centimetre. You can view more details on each measurement unit: The SI base unit for length is the metre. Note that rounding errors may occur, so always check the results. Use this page to learn how to convert between millimetres and centimetres. Type in your own numbers in the form to convert the units! You can do the reverse unit conversion from cm to millimetre , or enter any two units below: Enter two units to convert From: Millimeter A millimetre American spelling: The millimetre is part of a metric system. A corresponding unit of area is the square millimetre and a corresponding unit of volume is the cubic millimetre. Centimeter A centimetre American spelling centimeter, symbol cm is a unit of length that is equal to one hundredth of a metre, the current SI base unit of length. A centimetre is part of a metric system. It is the base unit in the centimetre-gram-second system of units. A corresponding unit of area is the square centimetre. A corresponding unit of volume is the cubic centimetre. The centimetre is a now a non-standard factor, in that factors of are often preferred. However, it is practical unit of length for many everyday measurements. A centimetre is approximately the width of the fingernail of an adult person. You can find metric conversion tables for SI units, as well as English units, currency, and other data. Type in unit symbols, abbreviations, or full names for units of length, area, mass, pressure, and other types.

The story of our ruler One day, i took my laptop computer to work in the coffee shop, just had a project on hand, and i had to tell the customer the actual size of a product. Unfortunately, after i tried the virtual online rulers on the Internet, i found a problem that these existing online rules are not very accurate. So later, we developed an online ruler by ourselves. It not only improves the accuracy of the measurement, but also has a scale of inches and centimeters so that it can be used in our work. If you are like us, you need a precise online ruler to measure the product size, i believe this online virtual ruler can also meet your needs. Command function I am very happy that many people like our online ruler, also i am very excited to review all the comments from all the visitors. What do you think about this online ruler? Use this screen ruler on your smartphone Turn your smartphone and tablet to a ruler and measure the scale of any small thing. Scan above QR code to open browser, and turn your mobile phone screen to landscape mode, so that the length of online ruler will longer. Could not find a real ruler on your desktop? Where is the 3. Try this cm inch converter. Converter Meters to Feet: Convert Yards to Meters: Convert CM to MM: How to use a ruler This ruler measure in two different units of length, inches on one side English ruler and centimeters on the other side metric ruler. A metric ruler is use to measure centimeter cm and millimeter mm , the centimeter is a unit of length in the International System of Units; An English ruler provides incremental measurements in inches, with each inch further divided into smaller fractions. Read an English ruler using fractions of an inch. The distance between any two large numbered lines is 1 inch. Observe the much simpler metric rulers. The distance between any two large numbered lines is 1 cm, a metric ruler features two types of lines. The largest mark centimeters, or cm. The smallest lines mark millimeters, or mm. The measurements are decimalized and there are no fractions. Record distances by the name of the line that it most closely matches.

Filter tuning simulation result as a function of air-gap height. BCB cap deflection simulation results. The details can be found in [9]. The thickness is 1. It should be noted that all of the gold electroplating are carried out using AZ PR mold. Figure 6 shows the fabricated BCB capped tunable filter. Figure 6 b shows the intentionally destroyed BCB cap to show the lower tuning electrodes placed at both sides of the planar filter. It should be noted that the upper tuning electrode was made on top of BCB cap instead of BCB cap inside due to the technological advantage. However, it is the reason why it needs such a high DC actuation voltage as mentioned earlier. In general, BCB cap has downward deflection due to its tensile residual stress as presented in [9]. As a reference, a BCB cap profile without gold electrode is given in Figure 7 b. The BCB cap profile of the fabricated tunable filter is investigated because it determines the behaviour of the BCB cap actuation. BCB cap profiles with and without upper tuning electrodes. The measured insertion loss and return loss of are shown in Figure 8. The discrepancy between measurement and simulation is mainly resulted from fabrication process errors on the thickness of BCB substrate and the defined gaps between the couple microstrip lines. Through the ADS and momentum modeling based on the measurement, it is found that the insertion loss and the return loss of the filter are sensitive to the gaps S2 and S3 which will be included into the new filter design. To enhance the tunability, other polymer material with higher dielectric material or mixture of dielectric and BCB polymer cap will be taken into account. Measured tuning characteristic of the BCB capped tunable filter⁵. Conclusions For a tunable filter at millimeter-wave frequency, dielectric actuation method is proposed as an alternative way of current MEMS varactor ones. Because dielectric actuation changes the electromagnetic field distribution of the filter, it can tune the center frequency of the filter. BCB dielectric cap placed above the filter like a package cap has been adopted as a tuning element as MEMS varactor and it will be actuated by electrostatic force varying the air-gap between BCB cap and the filter element. The BCB cap actuation showed the 1. Therefore, the influence of BCB dielectric to filter tuning was verified and further investigation on tuning will be performed as a function of air-gap height as well as actuation voltage. Taylor, was a year old vicar in Cloughton, North Yorkshire. He was advised that no publisher would touch his tale of good and evil set on the North-East coast in the 18th-century. After selling 2, copies in a month, largely through word-of-mouth, he was recommended to the agent who signed JK Rowling to Bloomsbury. The rest is a self-publishing dream come true. Self-publishing has come a long way in the last five years or so, once seen suspiciously as another form of vanity publishing, it is now increasingly viewed as a respectable way for authors to get a foot on the publishing ladder. The Guardian Self-publishing companies are offering all sorts of packages for the budding author. Authors are waiting months, even years, for their masterpieces to be read. You choose your own cover and Grosvenor submits it to Amazon. They will help you to print more copies should you need them. The royalties are all yours. It looks as though the publishing industry could be in line for a much needed shock. Vanity publishing is dead. Long live print on demand. One reader sent a copy to The Times, which declared the book Hotter than Potter. Taylor was then snapped up by a publisher, and Shadowmancer topped the British book charts for 15 weeks. They proved ever helpful, prompt in their dealings, and, an important point refreshingly concerned that the book turned out well. The final product was excellent. Their scheme to provide outlets for their authors I would regard as groundbreaking in self-publishing. My thanks to all at GHP and I look forward to further dealings with you. What can I say? It looks absolutely fantastic!!! And so many other positive words!!! My first book and you have made it look so great! Thank you so very very much, it has been a sheer joy to have my work published by Grosvenor House Ltd! Looking forward to my copies now! I have just recieved 5 copies. Hoping to give them as much publicity as I can! Thank you very much for a job well done - am hoping to release more books as soon as I break even! It really looks fantastic! I like the book cover design and have sent one straight off to Duncan. Their receipt rounds off a thoroughly successful project in bringing the book to publication through Grosvenor House Publishing, and I would like to take the opportunity of thanking you for all your help during the process. I am especially grateful for all the trouble you took to get the typesetting right - I really was not expecting to get that level of service from a self publishing company, and the finished book is testament to the quality of your work and that of your designers and printers. I must now go out and try to sell a few copies! I must thank you and all concerned for doing a most excellent job. The cover looks very impressive, both front and back; it most certainly stands out. I also thought the paper matches the cover and gives a good quality feel to the book. The type face is better than the one I originally submitted as a sample and the quality reproduction of the drawings is excellent. There also seems to be some sort of sheen, or gloss over the printed words and the drawings, which again adds to the overall quality. The motif round either side of the titles is another touch I particularly like. E- publishing really works for me but the anonymity sometimes felt distant ALSO - Good to know your personal biogs: So - "Thank you" again. In more than one sense There is one pertinent question that will no doubt cross your mind. To whom can I entrust my money and manuscript? Not so long ago, I was in the same situation. Fortunately for me, my sister has an acquaintance who is a member of a local literary circle, one of whom recommended Grosvenor House Publishing to me. My first contact with GHP was a telephone call to Kim Cross and, within a few minutes, I was impressed by his answers to my questions. Shortly after, I committed my money and manuscript into his care. Kim Cross, together with his Associates, mentored me through the process, and answered any worried e. What a wonderful Christmas present I had when I received my five complimentary books on the 11th December Seeing for the first time my two years of hard work culminating in a professionally produced book, I was ecstatic to say the least. Within ten days of my book being listed on Amazon, my first copy was sold - another huge thrill. Would I recommend GHP? So much so, my second novel is nearing completion and will definitely be offered to GHP for publication. Whichever way you choose to go, I wish you much success. God bless all at GHP. I appreciate your patience throughout all the backwards and forwards emails etc I take this opportunity to thank you for the prompt

service and attention to detail that made this whole process of self-publishing such a rewarding experience. I am a member of several writing classes, and I would not hesitate to recommend GHP to the students. Thank you once again. The finished product looks great. I have also found the book listed on Amazon! I am absolutely thrilled with the outcome and the quality of production. In the meantime I shall continue with the next one and hopefully be in touch with you again". To publicise it I sent a copy of the book to a hundred local commercial and BBC radio presenters. In the accompanying letter I simply asked the presenter if he could find time to read the book, and if he liked what he read would he please mention it on the air. I also said I was available for interviews. I have no way of knowing how many of the presenters read my book, or how many mentioned it on the air, but what I do know is that five of them gave me an on air interview. What I did to publicise my book worked for me, albeit a little fortuitously. My son is amazed that I finally published a book. My daughter-in-law claims she recognizes members of the family in the stories. I am very pleased. I took 5 years of Creative Writing Classes and enjoyed them but it is nothing compared with actually having a book. I intend to write another book although I must say the proof reading was almost enough to put me off at times! My editor did a really good job and also her comments which I used on the back cover were very useful. I am so happy with this project, thank you all again Please will you extend my warmest appreciation to Kim Cross , Jason in the design team and all others who had a hand in processing my novel for me. Sitting at my computer one night, bemoaning my lot, I tapped in self-publishing and Grosvenor Publishing House, amongst others, came up. After all, I had nothing to lose - I had already experienced ten years of failure - how could things be any worse. With nothing more than simple curiosity, I opened their website and I was astonished to find the answers to all the questions about the art of self-publishing I had ever had were before me. Of course I contacted Grosvenor Publishing House the following morning, and I was further pleased to discover that the people there were also writers and understood exactly what I was going through and what I needed. Because although I was confident in my ability to write a good novel, what I knew about publishing could be written on a postage stamp. Grosvenor Publishing House also have a library of great images for you to use on your book covers. I am grateful to Grosvenor Publishing House for what they have done for me, and if you want to experience the sheer joy of seeing your imagination in the tangible form of a book, then you should contact them. For in the lonely and sometimes desperate world of the writer, it is a great comfort to know that the people there will be only too willing to help when the inevitable glitch rears its ugly head. But it is also to thank you for the professionalism and understanding shown to me by Ruth and Jason and yourself. The books are notably stunning! You are an amazing company and I thank you all, once again. Very pleased and such quick delivery! Thank you for your e mail enclosing a cover proof of my Book. It looks really nice. I have gone through the Manuscript. It meets with my approval. Your Department has done a nice Job. Please thank them from me. I am overwhelmed and feel very emotional. My love and best wishes to you all Anne. I also received my 5 books today!
