

1: 8th Grade Science STAAR Review | Kesler Science

General review for 8th Grade Science STAAR Review Learn with flashcards, games, and more â€” for free.

This all adds up to some intense pressure and stress. Believe meâ€¦I know that feeling well. I hope this post will help to ease some of that stress. Four individual mini assessments are also included to help gauge student knowledge and comprehension. So how is a review booklet going to help my students? I have compiled a list of 5 ways to use this booklet within your classroom to increase its effectiveness. Flip Your Classroomâ€” Assign your students a page each night to read and study at home. Tell them to highlight key information and to write down any questions they may want to ask in class the next day. They write what they already know K , what they want to know W , and what they have learned L. My classes love it! Let Students Teach â€” Group your students in pairs or allow them to choose a partner if you are brave! Assign a page of the booklet to each group. Instruct the groups that they must become an expert of the concept they were assigned. I have learned that the kids have that special connection with one another. They are able to explain concepts to one another amazingly well. Have the students take out a sheet of paper. They do not need to put their name on their paper. They will take more risks and be more willing to participate if it is anonymous. Turn to a random page of the booklet or a page previously selected and read the title of the page to the students. Give the students seconds to write something on their paper that relates to the concept. The students will then crumple up their paper, like a snowball, and throw it across the room. The teacher can ask for volunteers to share some ideas that were written. This process can continue as long as you would like. I usually do rounds with my students before moving on. You know their strengths and weaknesses. I like to invite my struggling students to tutorials that take place before school, during lunch, or after school. I separate these students into groups based on the concepts they struggle with the most. I use old tests, assessments, labs, or homework assignments as my data. I keep the groups small with no more than students in each session. A short rotation with teacher check points usually brings our session to an end. Students are given the opportunity to voice their concerns and ask questions about anything they do not understand. This is a great way to build better relationships with your students. Start this early in the year and it will be life changing. This resource contains 4 assessments by reporting category that are ready to print and be used. You may even choose to use the assessments as a pre-assessment tool. Students that perform extremely well on the pre-assessment can help to peer teach other students. You may even differentiate your classroom to allow these students to work on some other enrichment activity or student choice activity with teacher approval. There are so many other beneficial ways to use this resource, but I hope that this gives you a glimpse of its possibilities. I appreciate you taking the time to read this post and I wish you all the best in the upcoming season of testing!
