

1: Whitman Mission National Historic Site (U.S. National Park Service)

The Final Mission of Extortion 17; From one of our finest military historians comes a monumental work that shows us at once the truly global reach of World War II.

Columbia memorial in Arlington National Cemetery Columbia was destroyed at about During the intense heat of re-entry, hot gases penetrated the interior of the wing, likely compromising the hydraulic system and leading to control failure of the control surfaces. The resulting loss of control exposed minimally protected areas of the orbiter to full-entry heating and dynamic pressures that eventually led to vehicle break up. The collection was opened to the media once and has since been open only to researchers. The seven crew members who died aboard this final mission were: Rick Husband , Commander; William C. McCool , Pilot; Michael P. The nose cap and remains of all seven crew members were found in Sabine County , East Texas. The museum tells the story of Space Shuttle Columbia explorations throughout all its missions, including the final STS An area is dedicated to each STS crew member, and also to the Texas Forest Service helicopter pilot who died in the recovery effort. The museum houses many objects and artifacts from: The museum features two interactive simulator displays that emulate activities of the shuttle and orbiter. The digital learning center and its classroom provide educational opportunities for all ages. The Columbia Hills on Mars were also named in honor of the crew, and a host of other memorials were dedicated in various forms. It was dedicated to the astronauts whose lives were lost in the disaster. Morse donated songwriting royalties to the families of lost astronauts. Both CDs survived the destruction of the shuttle and the mile plunge. In the television series Star Trek: The uniforms on NX Columbia bear a crew patch depicting 7 stars, in honor of the astronauts who died in the accident. The Virtual Console release of the original games still identified the Space Shuttle as Columbia. A restored Columbia was used in episode 19 "Wild Horses" of the anime Cowboy Bebop to rescue Spike when his Swordfish enters a steep orbit and is going to burn up. After the rescue, the shuttle crash-lands after losing heat-resistant tiles. The anime, made in , predated the Columbia disaster by five years. The structural differences between Columbia and the other shuttles are central to the plot. The shuttle lands successfully by the end of the episode.

Three friends from the wrong side of the law try to find out who among them might have disposed secret information to law enforcement.

Facebook Twitter When an Allied plane took to the skies headed for occupied Europe in WWII, there existed the reasonable probability the crew would not make it back alive. Each time a pilot took flight, the odds went up. The recognition that the statistical likelihood would catch up with everyone sooner or later led the Allies to establish various quotas. Completing a specified number of missions, and an airman could ride out the war as an instructor or in some other billet. For Ian Willoughby Bazalgette, he took another route. Despite having completed a successful tour of operations and picking up the Distinguished Flying Cross, he seemed destined to fight the odds. He started out dropping mines over the north sea and eventually found his way to the skies of Germany, including Berlin. Each time he returned. On D-Day, he could be seen above France doing his worst upon the enemy. While leading a run against V-2 rocket storage caves, his bomber was hit by a devastating burst of anti-aircraft fire. Ordering his crew to bail out if they were able, he did his best to bring the plane and its wounded to the ground. With peace at hand, Bazalgette and his family moved to England where he attended various schools. Despite struggling with a bout of clinical tuberculosis at a young age, Bazalgette grew up healthy and ready for the next great war. Coming of age just as the world was yet again entering a conflict, Bazalgette enlisted in the Royal Artillery. In , he was commissioned a second lieutenant. He initially served as an instructor on searchlights, before making his way to the Royal Air Force Volunteer Reserve. Bazalgette was determined to become a pilot but could not have known in doing so; he would hold a place in military history. Seemingly a natural at flying, Bazalgette had obtained the rank of Pilot Officer by January , and his sortie count began. His role was to fly out over the North Sea and drop mines from above. While the mission seemed relatively mundane, the risk of German interception did exist. After 13 missions over the North Sea, the stakes were upped. France, 4 August It was then he fought the statistical probability of not returning, time and time again. He flew over some of the most heavily defended areas in Europe including Kiel; St. Nazaire; Essen and Berlin itself. Enemy fighters, daunting barrages of anti-aircraft fire and a crash landing or two did not take Bazalgette down. In May he was awarded the Distinguished Flying Cross for courage and determination. For Bazalgette, the magic number was 28 operations. War, however, had a different path for him. In he was recruited to join the elite Pathfinder Force. His job was to help guide and mark targets for the primary bombing force for the Allied invasion of Europe. Again, he was in the middle of the action, but Bazalgette had not been impressed with his safe instructor duties. In June , Bazalgette and the other elite Pathfinders were doing their worst upon the enemy in and around Normandy. His mission count began to rocket into the 30s and 40s as Bazalgette seemed to beat the statistics. However, on his 58th flight over the skies of France, his lucky streak came to an end. Leading from the front as always, his Lancaster bomber took a withering burst of anti-aircraft fire. Both engines on his starboard side were disabled, and fire began to rage through the aircraft. Some people would have seen it as a sign to turn for home, but Bazalgette was aware the deputy master bomber had already been taken out of the action. The result of the raid fell to the man with 57 missions under his belt. Continuing, and piloting the plane with great skill, Bazalgette arrived on target and was able to mark the location for the rest of the aircraft successfully. However, things for him went from bad to worse. An engine on his port side gave way sending the aircraft into a spiraling descent. Miraculously, he was able to steady the plane. Bazalgette ordered all those who were physically able to bail out. He then attempted a crash landing in an attempt to save the remaining two crewmen who were wounded. Despite great skill and courage, when the aircraft hit the ground it burst into flames killing all on board. For his actions that day on his 58th mission, Ian Willoughby Bazalgette was awarded the Victoria Cross and the eternal respect of every pilot to take to the skies with him. He was buried in a churchyard near Beauvais, France, where his grave remains to this day. Ian Willoughby Bazalgette could not beat the statistical probabilities, but he did pick up a rare military honor and a hallowed place in the halls of military history.

3: On his 58th and Final Mission Ian W. Bazalgette Picked up the Victoria Cross over France

List of Star Trek: The Next Generation , and the ninth episode of the fourth season. But following a shuttle crash and a near disastrous search for water that leaves the captain near death, Wesley finds himself charged with the weighty responsibility of keeping both himself and Picard alive until a rescue team can locate them. Plot[edit] The Enterprise has traveled to the Pentarus system where Captain Picard Patrick Stewart must mediate a dispute among some miners on the fifth planet. Wesley Crusher Wil Wheaton receives word that he has been accepted to Starfleet Academy and, for his final mission, he will accompany Picard on his shuttle trip to Pentarus V. A distress call comes in from Gamilon V, where an unidentified vessel has entered orbit and is giving off lethal doses of radiation. Picard orders Riker to take the Enterprise to resolve that situation while he and Wesley travel in a shuttle sent by the miners, commanded by Captain Dirgo. Though they are unharmed, the shuttle is beyond repair, and its communication systems and food replicators are disabled. Dirgo admits he has no emergency supplies on board, so they are forced to search for shelter and water. With his tricorder, Wesley identifies some caves and a potential source of water some distance away, and the three set out across the desert. Reaching a cave, they find a fountain-like water source, but it is protected by a crystalline forcefield. Dirgo attempts to use a phaser to destroy the field, but this activates a burst of energy from the fountain which encases the phaser in an impenetrable shell and causes a rock slide; Picard pushes Wesley out of the way but is severely injured in doing so. Meanwhile, the Enterprise has arrived at Gamilon V, finding the unidentified ship is an abandoned garbage scow filled with radioactive waste. Their initial attempt to attach thrusters to the barge to propel it through an asteroid belt into the Gamilon sun remotely fails, and Commander Riker Jonathan Frakes is forced to attempt to tow the barge themselves using the tractor beam, exposing the crew to the lethal radiation. As Wesley continues to analyze the forcefield, Dirgo becomes impatient and attempts to breach the field again, but this time the energy burst encases him as well, killing him. Picard, weak from his injuries, gives Wesley advice about the academy, and tells him he is proud of him. Wesley refuses to give up. Meanwhile, the Enterprise, despite the rising radiation levels on board, which are nearing lethal, manages to get the barge headed into the sun and speeds off to help in the search for the shuttle. Wesley continues to study the fountain, and devises a plan to disable the forcefield. He fires his phaser at the fountain to attract the energy defense mechanism, but reprograms it using his tricorder to disable the field instead, and is finally able to access the water. Shortly thereafter, the Enterprise locates the wreckage of the mining shuttle, and Picard and Wesley are rescued. As Picard is carried from the cave, he tells Wesley that he will be missed.

4: Apollo 17 in Real-time

*The Last Mission: The Secret History of World War II's Final Battle [Jim Smith, Malcolm McConnell] on www.enganchecubano.com *FREE* shipping on qualifying offers. A gripping account of the final American bombing mission of World War II and how it prevented a military coup that would have kept Japan in the war.*

For the year-old pilot, it would be his final flight. Jerry Yellin, is an engrossing though short page book about that fateful final mission and the events that led up to it. Through author Don Brown, the desperate narrative of what Capt. Yellin experienced and remembers is retold more than 70 years later. Captain Yellin The book chronicles the final days of the war as U. Marines fight to take Iwo Jima for use as a base to launch Ps in supporting the waves of Bs that were pummeling Japan. The tiny island was crucial to the Allied war effort since it was the perfect distance for the shorter-ranged fighter squadrons to take off from and protect the heavy bombers as they brought the war home to the enemy. Brown uses his story-telling abilities well to describe an extremely challenging moment in American history. Today, the veteran is 93 and active as an advocate for veterans causes. It is sometimes hard to realize what life was like in that era. We tend to romanticize World War II and view those involved as larger-than-life heroes. The truth is that those brave airmen, sailors, marines and soldiers were barely more than children. Most were frightened and year-olds just trying to do their duty and survive a brutal, costly war. Brown and Yellin do a good job demonstrating this. The atomic bombs have been dropped and Japan teeters on the edge. Everyone hopes it is over but the killing cannot stop until the enemy has surrendered. Schlambert must fly one more mission. They are told a code word that will be broadcast if Japan capitulates. They then took off on that fateful final flight. Yellin landed back at Iwo Jima horrified to learn his friend was likely killed after the war had ended. Pockets of resistance would hold out for several days and other Americans would lose their lives in the fight to end it all.
