

### 1: Mechanicals and speed | Crossbow Nation Forum

*The Nation of Speed exhibition will recount humankind's desire to become the fastest on land, sea, air, and space in the pursuit of commerce, power, and prestige. This new gallery will be a portrait of human ingenuity and will explore how the pursuit of speed has shaped American culture and our national identity.*

It is just physics that a thin wire rope will be faster than a PVC cord. I can do double unders and even triple unders with the Buddy Lee PVC rope but this thin wire rope makes it easier. Now as far as these wire coated speed ropes go there seem to be 3 tiers to buy on amazon 1- the plastic swivel ones that go for dollars. They tend to have a metal swivel bearing that attaches to the plastic handle and a ball swivel that the actual rope cord goes through. For the couple of extra dollars people should get this over the basic one. Tier 3- 30 dollars and up. Alum handles, double bearings one above and one below the cord for smother action. There are similar ropes for the same price, that look the same, have the same options, come with and extra rope , extra cable locks, a bag , etc. What I like about this rope is its fast, or at least faster than my buddy lee, and also faster than some tier 1 plastic swivel ropes at my gym. Another plus is the wire coated cable is not that rigid. For the price it seems like the best deal. If I hold the metal tip and give the plastic handle a good spin it spins for 3 seconds with a lot of turns 50 ish. When I try it with the other handle it spins for. I find quality control lacking when items are made for cheaply overseas. If not I can always return to amazon in 30 days. If both handles spun smoothly and freely this would get 4 stars. Got a reply a day later, on Christmas, that a new rope would be sent to me. But that is excellent customer service. I received it in a couple days. Customer service is great. They were good but not fluid. So I decided to take the handles apart and see what I could do. There are 2 ball bearing units in each handle. On of the ball bearings in the slow original handle was broken, so thats why it was slow. I used some silicone sewing oil to lubricate the rest of the ball bearing units and handles turn so much smoother. I asked WOD Nation if that could just send me 1 ball bearing unit to replace the broken one, however they do not have any parts. Only complete units are sent directly from overseas. And the customer service is very good. It has 2 ball bearing units, a black spacer, the tip piece with the ball swivel in it, and a screw.

### 2: A Nation Built on Speed / Ad\*Access / Duke Digital Repository

*A Nation Online: Entering the Broadband Age is the sixth report released by the U.S. Department of Commerce examining the use of computers, the Internet, and other information technology tools by the American people. Based on the U.S. Census Bureau's Current Population Survey of 57,*

Sign up for our Wine Club today. Did you know you can support The Nation by drinking wine? For more than years, The Nation has been committed to fearless, independent journalism. We have a long history of seeking alternative views and taking unpopular stances. We believe it is important to challenge questionable conventional wisdom and to foster debateâ€”not police it. Focusing on unreported or inadequately reported issues of major importance and raising questions that are not being asked have always been a central part of our work. To this day, however, the intelligence agencies that released this assessment have failed to provide the American people with any actual evidence substantiating their claims about how the DNC material was obtained or by whom. Related Article A Leak or a Hack? The most recent VIPS memo , released on July 24, whatever its technical merits, contributes to a much-needed critical discussion. Despite all the media coverage taking the veracity of the ICA assessment for granted, even now we have only the uncorroborated assertion of intelligence officials to go on. Those questions remain vital. Subsequently, Nation editors themselves raised questions about the editorial process that preceded the publication of the article. The article was indeed fact-checked to ensure that Patrick Lawrence, a regular Nation contributor, accurately reported the VIPS analysis and conclusions, which he did. And given the technical complexity of the material, we would have benefited from bringing on an independent expert to conduct a rigorous review of the VIPS technical claims. Freitas lays out several scenarios in which the DNC could have been hacked from the outside, although he does not rule out a leak. This is not the first time a VIPS report has been internally disputed, but it is the first time one has been released over the substantive objections of several VIPS members. With that in mind, we asked Drake and those VIPS members who agree with him to present their dissenting view. We also asked VIPS members who stand by their report to respond. In presenting this follow-up, The Nation hopes to encourage further inquiry into the crucial questions of how, why, and by whom the DNC e-mails were made publicâ€”a matter that continues to roil our politics. We especially hope that other people with special expertise or knowledge will come forward. A great edifice has been erected during this time. President Trump, members of his family, and numerous people around him stand accused of various corruptions and extensive collusion with Russians. Half a dozen simultaneous investigations proceed into these matters. Last week news broke that Special Counsel Robert Mueller had convened a grand jury, which issued its first subpoenas on August 3. Allegations of treason are common; prominent political figures and many media cultivate a case for impeachment. In retaliation, Moscow has announced that the United States must cut its embassy staff by roughly two-thirds. To suggest that military conflict between two nuclear powers inches ever closer can no longer be dismissed as hyperbole. These are the foundation stones of the edifice just outlined. The evolution of public discourse in the year since is worthy of scholarly study: Possibilities became allegations, and these became probabilities. Then the probabilities turned into certainties, and these evolved into what are now taken to be established truths. By my reckoning, it required a few days to a few weeks to advance from each of these stages to the next. This was accomplished via the indefensibly corrupt manipulations of language repeated incessantly in our leading media. Lost in a year that often appeared to veer into our peculiarly American kind of hysteria is the absence of any credible evidence of what happened last year and who was responsible for it. It is tiresome to note, but none has been made available. Instead, we are urged to accept the word of institutions and senior officials with long records of deception. Few have noticed since these evasive terms first appeared that an assessment is an opinion,

nothing more, and to express high confidence is an upside-down way of admitting the absence of certain knowledge. This is how officials avoid putting their names on the assertions we are so strongly urged to accept—as the record shows many of them have done. We come now to a moment of great gravity. Until recently, researchers undertaking this work faced critical shortcomings, and these are to be explained. But they have achieved significant new momentum in the past several weeks, and what they have done now yields very consequential fruit. Forensic investigators, intelligence analysts, system designers, program architects, and computer scientists of long experience and strongly credentialed are now producing evidence disproving the official version of key events last year. Their work is intricate and continues at a kinetic pace as we speak. But its certain results so far are two, simply stated, and freighted with implications: Hard science now demonstrates it was a leak—a download executed locally with a memory key or a similarly portable data-storage device. Forensic investigations of documents made public two weeks prior to the July 5 leak by the person or entity known as Guccifer 2. Before Guccifer posted them they were adulterated by cutting and pasting them into a blank template that had Russian as its default language. Guccifer took responsibility on June 15 for an intrusion the DNC reported on June 14 and professed to be a WikiLeaks source—claims essential to the official narrative implicating Russia in what was soon cast as an extensive hacking operation. To put the point simply, forensic science now devastates this narrative. This article is based on an examination of the documents these forensic experts and intelligence analysts have produced, notably the key papers written over the past several weeks, as well as detailed interviews with many of those conducting investigations and now drawing conclusions from them. Before proceeding into this material, several points bear noting. One, there are many other allegations implicating Russians in the political process. The work I will now report upon does not purport to prove or disprove any of them. Who delivered documents to WikiLeaks? We do not know the answers to such questions. It is entirely possible, indeed, that the answers we deserve and must demand could turn out to be multiple: One thing happened in one case, another thing in another. The new work done on the mid-June and July 5 events bears upon all else in only one respect. We are now on notice: Given that we now stand face to face with very considerable cases of duplicity, it is imperative that all official accounts of these many events be subject to rigorously skeptical questioning. What evidence of this has been produced? Such rock-bottom questions as these must now be posed in all other cases. Neither is there anything far-fetched in a reversal of the truth of this magnitude. American history is replete with similar cases. The Spanish sank the Maine in Havana harbor in February. The Sandinistas were Communists. The truth of the Maine, a war and a revolution in between, took a century to find the light of day, whereupon the official story disintegrated. We can do better now. It is an odd sensation to live through one of these episodes, especially one as big as Russiagate. But its place atop a long line of precedents can no longer be disputed. Three, regardless of what one may think about the investigations and conclusions I will now outline—and, as noted, these investigations continue—there is a bottom line attaching to them. We can even call it a red line. Under no circumstance can it be acceptable that the relevant authorities—the National Security Agency, the Justice Department via the Federal Bureau of Investigation, and the Central Intelligence Agency—leave these new findings without reply. Not credibly, in any case. Silence now, should it ensue, cannot be written down as an admission of duplicity, but it will come very close to one. It requires no elaboration to apply the above point to the corporate media, which have been flaccidly satisfied with official explanations of the DNC matter from the start. Qualified experts working independently of one another began to examine the DNC case immediately after the July events. Prominent among these is a group comprising former intelligence officers, almost all of whom previously occupied senior positions. Veteran Intelligence Professionals for Sanity (VIPs), founded in 2002, now has 30 members, including a few associates with backgrounds in national-security fields other than intelligence. The chief researchers active on the DNC case are four: Most of these men have decades of experience in matters concerning Russian intelligence and the related technologies. This article reflects numerous interviews with all of them conducted in person, via Skype, or by telephone. The customary VIPs format is an open letter, typically addressed to the president. The group has written three such letters on the DNC incident, all of which were first published by Robert Parry at [www.washingtonpost.com](http://www.washingtonpost.com). Here is the latest, dated July 24; it blueprints the forensic work this article explores in detail. They have all argued that the hack theory is

wrong and that a locally executed leak is the far more likely explanation. The group lacked access to positive data. It had no lump of cyber-material to place on its lab table and analyze, because no official agency had provided any. Based on the knowledge of former officials such as Binney, the group knew that 1 if there was a hack and 2 if Russia was responsible for it, the NSA would have to have evidence of both. Binney and others surmised that the agency and associated institutions were hiding the absence of evidence behind the claim that they had to maintain secrecy to protect NSA programs. The absence of evidence supporting the hack theory demonstrates that it cannot be so.

### 3: Speed Nation - National Geographic Channel - Asia

*Speed Nation Powersports is a powersports dealership located in New Hudson, MI. We sell new and pre-owned Powersports Vehicles and Agricultural Equipment from Polaris, Kawasaki, Yamaha, Husqvarna, Artic Cat, Textron Off Road, Alta Motors and Triton Trailers with excellent financing and pricing options.*

### 4: A New Report Raises Big Questions About Last Year's DNC Hack | The Nation

*The engineering that goes into our favorite cars is a wonderful thing; finely tuned suspension, gloriously sonorous exhausts, pinpoint accurate steering, and sometimes, glorious engines that complete a model by adding that cherry on top of an already almost perfect package.*
