May 14, The summer is finally here, and there is no better time to get out and get active. Warm weather, exotic locations, and time away from work all offer opportunities to burn calories while having fun. Even while on vacation, a swim in the pool or a walk along the beach burns calories at a far higher rate than sitting at your desk will, so wherever you are this summer, you can be burning calories too. With plenty of team sports now at the height of their season and loads of great attractions and events to visit, the summer time makes us feel more active wherever we live. Here are some for the very best outdoor activities that will help you to burn calories this summer: Go for a bike ride. Grab your bike from the garage and get riding. Even a gentle spin with the family can burn as much as 50 calories in just seven minutes, making an afternoon spent riding the perfect summer fun activity for the whole family. Do some work in the garden. While this may not sound particularly sporting, pulling weeds, mowing the lawn, and other general garden maintenance jobs will burn more calories than you think. The coolest and most relaxing way to spend the dog days of summer. Mix up your strokes, or even try a little water aerobics if you want to power up your workout. Swimming burns tons of calories and will keep you cool too. Go for a round of golf. Gorgeous greens on hot sunny days are a wonderful place to be. Golf offers a gentle workout for the legs and arms and is also a great way to focus the mind. You can also boost your brainpower while burning calories by investing in an effective supplement like nootropics to help hone both mind and body. Go for a stroll. Whether you are just taking a slow after-dinner stroll, or taking the family on a longer walk, just strolling together on warm evening will not only burn calories, but can also aid digestion, lighten your mood, and help you sleep. Time for a new summer wardrobe? Pounding the pavement in and out of stores and changing rooms burns more calories that you might first suspect. Get fit and get new clothes at the same time! High octane fun on the beach burns a lot of calories. Passing, hitting, and generally jumping around in the sand works nearly every part of your body. Take it easy and if you are not a pro, remember to drink plenty of water. A day out hiking is a great activity for the whole family to get involved with. A good steady walk at a pace that suits your fitness levels will burn calories as you go. Plus, you can take in the scenery and enjoy the weather. If you are visiting a new town or city, get out and see what it has to offer. Walking city streets can burn more calories than you think as you explore mile upon mile of urban icons. A bit like swimming, surfing works every muscle in your body and is great for toning up and burning calories at the same time.

Check out BOTA Studio in Lake in the Hills, IL for your next record. "Born Of Osiris" new album "The Discovery" and "Oceano" latest single for the "Homefront" video game was recently recorded here.

Summer Lawn Care Guide Summer is a maintenance season for lawns. If spring lawn care is about getting your lawn healthy and green, summer lawn care is about KEEPING it healthy while temperatures soar and rainfall becomes a fleeting memory. Here are some tips for keeping your lawn in shape over those long, hot days of summer.

About Summer Lawns After the spring growing season, summer brings quite a bit of stress to lawn grasses. We want our lawns lush and green for outdoor activities, and we try to fight nature by continuing to fertilize, water, and coax new growth out of our lawns no matter what the weather. However, by understanding and respecting the seasonal changes of turf grasses, you can take steps to care gently for your lawn as the mercury rises. Cool-season grasses such as fescue, bluegrass, and rye grow best when temperatures are in the 60s F. Warm-season grasses including Zoysia, St. Augustine, Centipede, and Bermuda like temperatures in the 70s. Once temperatures get into the 80s and above, lawns will begin to struggle a little, with cool-season grasses having the hardest time. Growth will slow, color may fade, and lawns will show signs of wear and tear as they are less able to recover from stress and traffic. Some cool-season lawns will even go dormant in the summer, looking brown and brittle until early fall. If you are unable to water regularly, allow your lawn to go dormant.

Water Wisely Lawns need at least one inch of water per week, and more when the heat is severe. Use a rain gauge or straight-sided can to keep track of the amount of water received from rainfall and irrigation. Water deeply and less frequently to encourage drought-tolerant roots. Water early in the day to reduce evaporation and fungal growth. Small tuna cans make a good temporary water gauge.

Mowing Tips Raise your mower blade in the summer. Taller grass is more drought-tolerant, grows deeper roots, and helps shade the earth to prevent weed seeds from germinating. Mulching grass clippings helps keep moisture levels steady. This keeps your grass healthier and prevents the clippings from smothering the grass. Keep mower blades sharp. Make sure your mower is cutting your grass, not tearing it, to minimize stress during hot temperatures. Mowing higher means mowing more often. Applying extra fertilizer in the heat of summer can burn your lawn and create a flush of tender growth that will struggle in the hot summer weather. Never fertilize dormant lawns – wait until they green up in the fall.

Lawn Tip Organic fertilizers are naturally slow-release, and they are much less likely to burn your lawn or pollute the environment than chemical fertilizers. Organic packaged fertilizers are becoming more widely available.

High-Traffic Areas By summer, many lawns begin to show signs of wear, especially in a few popular pathways. Consider installing stepping stones to minimize damage to your grass, and try to minimize traffic on dormant, brittle lawns.

Control Weeds Summer is the season to get those growing weeds removed before they bloom and disperse seed for next year. Keep in mind that during the heat of summer, ANY product can be damaging to already-stressed lawn grasses, so use sparingly or hand-pull weeds instead. Use weed control products when temperatures are under 85 degrees F.

Insects and Diseases Dormant or drought-stressed summer lawns can be more susceptible to insect infestations, such as chinch bugs, cutworms, armyworms, sod webworms, fire ants, fleas, and mosquitoes. Minor infestations often take care of themselves, but severe problems may require attention. Summer is also the time for fungal diseases, such as powdery mildew and brown patch. Apply fungicide if needed, and avoid watering in the evening to keep nighttime moisture at a minimum. Grubs will begin hatching in your lawn over the summer. If grubs typically cause problems in your lawn, you can begin applying grub control around midsummer. Use insecticides only if you have severe lawn damage.

Is my ticket personal? Your name as buyer of the ticket is stated on each ticket you secured. In that way your tickets are personal. Every participant needs their own ticket and a valid and legal ID to be shown at the gate. Tickets are scanned at the gate and transferred into a wristband. Attending without your ID and a valid ticket is a threat to the legal status of the entire event, and risk us getting shut down completely. Can I transfer event tickets? It is possible to transfer your ticket to someone else if you are not able to attend after all. You are allowed to resell your tickets at face value, or you can gift a ticket. After scanning, you receive a wristband for entrance to the event for the whole weekend. Visitors without the proper wristband will be asked to leave. Are day tickets available, besides the weekend tickets? Where the Sheep Sleep is best when experienced from beginning to end. Can I get free access through the grant process? You have to obtain a ticket for the event first, like everyone else. Do I need a parking or RV ticket too? We also encourage all of our sheep to minimize their carbon footprint by car sharing and public transportations. Where does the money of the ticket sales go to? First, to cover some necessary costs; rent, permits, power, toilets, transport, safety arrangements and some other small things. The rest of the money will go towards Art Grants. Your Art Lead can inform you on this process. Children receive a different colour wristband since they cannot be served alcohol or cigarettes. Are there sound restrictions? YES; all theme camps and participants will be asked to honor the amplified sound limitations starting at There will be a hour stage for the nightsheep. Can I start my own burn? No when a national dry weather alert is declared. Always ask your local Ranger for the current status! YES; electricity is available on site and shared with all the theme camps, but we encourage the use of solar over anything! And we also encourage to leave your phone in your tent! Participate There are no spectators at Where the Sheep Sleep. But not without the described Consent taken into consideration. Photography and video In order to create a safe space for participants to discover their own boundaries, the use of photo and video is discouraged. In fact, more fun is to be had by looking up instead of at your phone. And if you want to take a picture, make sure everyone in frame is in agreement. As ticket buyer you also agree with our Use of Images. Based on their proposal a select group will be invited. Participants who feel limited in their participation by the presence of professional media gear are encouraged to notify the organization.

I have a burning bush that is turning brown. My neighbor lost three bushes Asked September 5, , 6: My neighbor lost three bushes after the leaves turn brown. What could be the cause? The brown is on only one large branch not the entire bush. What can I do to keep the bush alive? There are two other burning bushes next to the one with the brown leaves but they are still green and not showing any stress. Several diseases can also affect burning bush plants, including cankers, fungal spots and powdery mildew. It must be confirmed with lab tests but it usually progresses rapidly and often results in the death of the plant. Removal of that shade tree may have changed the environment enough to start a spiral of stressors. Were your neighbors bushes also shaded by that tree? Finally, it appears that burning bush does not take kindly to hardwood mulches. You did not say if this bush is mulched, but it is something to consider. One of the first things you should check on is if there is any insect activity on the plant. Here is an article from Iowa State University that describes the most common insect pests of Burning Bush, and offers some treatment strategies: The loss of that shade tree would have exacerbated the low moisture conditions. A mulch of shredded bark not hardwood chips will help retain moisture. Have you fertilized this bush? Burning bush takes well to hard pruning. If you find evidence of insect activity and are unsure of what to do next please contact AaE again. Thanks for your question.

Unravelling an unprecedented natural disaster why is B. UBC forestry scientist says a major re-think of forest management is needed immediately Aug 22, 1: Glacier Media The photo on the left was taken on Aug. The photo on the right was taken from the same vantage point on Aug. Last year was record setting in the number of air quality advisories issued, as 19 warnings went out across the Lower Mainland. The previous record, set in , sat at Central and southeastern B. Metro Vancouver climate engineer Francis Reis expected local advisories to continue until at least Wednesday if not into Thursday and Friday as well. Satellite images show the smoke from B. Considered an anomaly even 10 years ago, a summer in B. How has this happened? The easiest piece of the puzzle is population. There are simply more of us, in more pockets of the province, which inevitably increases the chance of man-made fires. Varying estimates suggest anywhere between 30 to 50 per cent of the current fires are caused by people. Climate change is another easy and obvious answer, but far from the only one. The mountain pine beetle epidemic that started in the s was a substantial sign of things to come. For starters, it killed millions of hectares of trees and created an abundance of fire fuel across B. Those decisions created uniform forest types, which in turn, created untold amounts of fuel and a weakened resiliency to fires. In some instances, aspen and paper birch stands were killed off or overharvested. Referred to as broadleaf trees, those species are critical to large stands of trees: The ideal scenario, according to Daniels, is a forest full of mixed species and mixed densities of those species. That diversity allows for more fire resilience, more nutrients in the ecosystem and less fuel. Daniels said some remote fires should left to burn off, albeit in a controlled manner, so new ecosystems can start from scratch. That practice has already begun in parts of B. If you let a fire burn, it rejuvenates a new forest. Daniels pointed to a study that suggested 1. Those forests need to be thinned out, and the fuel on the ground removed before any sort of predetermined burn can happen. That process also includes an unpopular notion, at least politically cutting a bunch of trees down. Where older, thicker trees are more fire resilient, younger trees often act like wicks that pick up flames from the forest floor and transport the blaze up in to the tree canopy. Those costs will rise exponentially under the status quo approach. Daniels said that number can jump anywhere from two to 30 times higher once other factors like rebuilt infrastructure and human health costs and are tallied. Places such as California and parts of Australia that were once seasonal fire worries are now year-round concerns. Fire season in those locales is every day, every year. But a summer without haze is a different story altogether. I think that part of it is here to stay.
