

1: Wreck of the RMS Titanic - Wikipedia

The next time you check your credit score, you might discover it has taken a tumble because of a seemingly small mishap on your part. It ended up being reported to credit bureaus, also known as credit reporting agencies and credit reporting companies.

Almost immediately after Titanic sank on 15 April, proposals were advanced to salvage her from her resting place in the North Atlantic Ocean, despite her exact location and condition being unknown. The families of several wealthy victims of the disaster – the Guggenheims, Astors, and Wideners – formed a consortium and contracted the Merritt and Chapman Derrick and Wrecking Company to raise Titanic. The lack of submarine technology at the time as well as the outbreak of World War I also put off such a project. Whale falls, a phenomenon not discovered until – coincidentally, by the same submersible used for the first manned expedition to Titanic the year before [4] – demonstrate that water-filled corpses, in this case cetaceans, can sink to the bottom essentially intact. However, all fell afoul of practical and technological difficulties, a lack of funding and, in many cases, a lack of understanding of the physical conditions at the wreck site. Having found its exact position, more electromagnets would be sent down from a fleet of barges which would winch Titanic to the surface. Another proposal involved raising Titanic by means of attaching balloons to her hull using electromagnets. Once enough balloons had been attached, the ship would float gently to the surface. Again, the idea got no further than the drawing board. In the mid-1930s, a hosiery worker from Baldock named Douglas Woolley devised a plan to find Titanic using a bathyscaphe like Trieste, used to reach the bottom of the Mariana Trench in and raise the wreck by inflating nylon balloons that would be attached to her hull. Calculations showed that it could take ten years to generate enough gas to overcome the water pressure. One proposal called for, tons of molten wax or alternatively, Vaseline to be pumped into Titanic, lifting her to the surface. This, being lighter than liquid water, would float to the surface and could be towed to shore. The BOC Group calculated that this would require half a million tons of liquid nitrogen to be pumped down to the sea bed. Despite early negotiations with possible backers being abandoned when it emerged that they wanted to turn the wreck into souvenir paperweights, more sympathetic backers joined Ballard to form a company named Seasonics International Ltd. This was essentially a drillship with sonar equipment and cameras attached to the end of the drilling pipe. It could lift objects from the seabed using a remote-controlled mechanical claw. His aim was to use the publicity of finding Titanic to promote his newly established magazine, NOW! An expedition to the North Atlantic was scheduled for but was cancelled due to financial difficulties. However, he was unable to obtain financial backing for his planned expedition. To raise funds for his Titanic expedition, he obtained sponsorship from friends with whom he played poker, sold media rights through the William Morris Agency, commissioned a book, and obtained the services of Orson Welles to narrate a documentary. The scientists issued an ultimatum: The problem was exacerbated by technological limitations; the Sea MARC sonar used by the expedition had a relatively low resolution and was a new and untested piece of equipment. Nonetheless it managed to survey an area of some square nautical miles and identified 14 possible targets. To increase their chances of finding the wreck, the team employed a much more capable sonar device, the Scripps Deep Tow. The weather was again very poor, but all 14 of the targets were successfully covered and found to be natural features. On the last day of the expedition, an object that looked like a propeller was found. Conrad to have another look at the "propeller". This time nothing was found and very bad weather brought an early end to the expedition. Michael Harris and Jack Grimm had failed to find Titanic but their expeditions did succeed in producing fairly detailed mapping of the area in which the ship had sunk. Despite the failure of his expedition, Robert Ballard had not given up hope and devised new technologies and a new search strategy to tackle the problem. This consisted of a remotely controlled deep-sea vehicle called Argo, equipped with sonar and cameras and towed behind a ship, with a robot called Jason tethered to it that could roam the sea floor, take close-up images and gather specimens. The images from the system would be transmitted back to a control room on the towing vessel where they could be assessed immediately. As Thresher and Scorpion sank, debris spilled out from them across a wide area of the seabed

and was sorted by the currents, so that light debris drifted furthest away from the site of the sinking. This "debris field" was far larger than the wrecks themselves. By following the comet-like trail of debris, the main pieces of wreckage could be found. Only twelve days of search time would be left at the end of the expedition to look for Titanic. The idea was for the French to use the sonar to find likely targets, and then for the Americans to use *Argo* to check out the targets and hopefully confirm whether they were in fact the wreck. However, they found nothing, though it turned out that they had passed within a few hundred yards of Titanic in their first run. Whereas sonar could not distinguish man-made debris on the sea bed from natural objects, cameras could. The debris field would also be a far bigger target, stretching a mile 1. One of them was identified as a boiler, identical to those shown in pictures from *Titanica*. Controversially, they salvaged and brought ashore more than 1, objects. This was used to create the documentary film *Titanica*, which was later released in the US on DVD in a re-edited version narrated by Leonard Nimoy. Over the course of fifteen days, *Nautile* made fifteen dives lasting between eight and twelve hours. It weighed 20 tons, measured 15 by 25 feet 4. Various celebrities were recruited to enliven the proceedings, including Burt Reynolds, Debbie Reynolds and Buzz Aldrin, and "Grand Receptions" for VIPs were scheduled on-shore where the hull section would be displayed. However, the lift ended disastrously when rough weather caused the ropes supporting the bags to snap. Although the attempt was strongly criticised by marine archaeologists, scientists and historians as a money-making publicity stunt, a second, successful attempt to lift the fragment was carried out in *The so-called "Big Piece"* was conserved in a laboratory in Santa Fe for two years before being put on display at the Luxor Las Vegas hotel and casino. He used the footage in his blockbuster film *Titanic*. A crucible of human values under stress. The wedding was essentially a publicity stunt, sponsored by a British company called *SubSea Explorer* which had offered a free dive to Titanic that Leibowitz had won. The first, carried out between 22 June and 2 July, performed four dives in two days. Its key aims were to assess the current condition of the wreck site and carry out scientific observations to support ongoing research. The stern section, which had previously received relatively little attention from explorers, was specifically targeted for analysis. The microbial colonies aboard Titanic were also a key focus of investigation. The expedition spent 11 days on the wreck, carrying out high-resolution mapping using video and stereoscopic still images. James Cameron returned for the third and last time to film *Last Mysteries of the Titanic*. Two autonomous underwater vehicles "torpedo-shaped robots" repeatedly ran backwards and forwards across the 3 by 5 miles 4. The expedition encountered difficulties: This same year saw the discovery of the new bacteria living in the rusticles on the Titanic, *Halomonas titanicae*. Although fourteen survivors testified that the ship had broken apart as she sank, this testimony was discounted by the official inquiries, and it was supposed that the ship had sunk intact. Its distance from the stern was caused by its planing forward horizontally by about 1 foot 0. These dragged along the boat deck, tearing away many of the davits and much of the other deck equipment. When the bow section hit the sea bed, the weakened decks at the rear, where the ship had broken apart, collapsed on top of each other. Pellegrino has proposed that this was the result of a "down-blast" of water, caused by a slipstream that had followed the bow section as it fell towards the sea bed. Dense rusticles hanging from the steel decking combined with the deep layers of silt that have accumulated in the interior make navigating the wreck disorienting. Passenger staterooms have largely deteriorated because they were framed in perishable softwoods such as pine, leaving a warren of hanging electrical wire, light fixtures and debris interspersed with more durable items like brass bed frames, light fixtures, and marble-topped washstands. Woodwork with attachments like doorknobs, drawer-pulls or push-plates survive in better condition because of the small electric charge emitted by metal which repels fish and other harmful organisms. On the whole hardwoods like teak and mahogany, the material for most stateroom furnishings, are more resistant to decay. Lavatories and bathrooms within the passenger quarters survive because they were framed in steel. Most of the Dining Saloon has collapsed because of its proximity to the break-up point midships, but the very forward part is accessible and the rectangular leaded glass windows, table bases, and ceiling lamps are noticeably preserved. The Reception Room with its leaded glass windows and mahogany paneling remains remarkably intact, although the ceiling is sagging and there is a deep layer of silt obstructing the floor. The *Ghosts of the Abyss* expedition attempted to locate the famed Renault automobile belonging to William Carter, but the cargo was

indistinguishable beneath the silt and rusticles. It had not fully filled with water when it sank and the increasing water pressure caused trapped air pockets to implode, tearing apart the hull. It was loud enough that multiple survivors reported hearing explosions about ten seconds after the stern had sunk beneath the waves. Data from a sonar map made during an expedition showed that the stern section rotated like a helicopter blade as it sank. This showed that instead of simply disintegrating into a mass of debris, large sections of the ship broke off in chunks and that the ship broke in half between the second and third funnels, not the third and fourth funnels. Five of the boilers from Number 1 Boiler Room came loose during its disintegration and landed in the debris field around the stern. Experts believe that this tight cluster of the boilers marks the hypocenter of where the ship broke up 12, feet above. Titanic would effectively be in a deep freeze. Eddies from the current flow constantly across the wreck, scouring the sea bed and keeping sediment from building up over the hull. It used to be thought that the depths of the ocean were a lifeless desert, but research carried out since the mids has found that the ocean floor is teeming with life and may rival the tropical rainforests for biodiversity. A total of 28 species were observed, including sea anemones , crabs , shrimp , starfish , and rattail fish up to a yard 1 m long. Henrietta Mann, who discovered the bacteria, has estimated that the Titanic will completely collapse possibly as soon as It is film which will preserve it for history now," says Mann. I think Titanic has maybe 15 or 20 years left. When their food ran out they died, leaving behind calcareous tubes. This has been disputed by scientists, who have estimated that the bodies would have completely disappeared by the early s at the latest. Some of the wooden objects on the ship and in the debris field have not been consumed, particularly those made of teak , a dense wood that seems to have resisted the borers. They have produced "reddish-brown stalactites of rust [hanging] down as much as several feet, looking like long needle-like icicles", as Robert Ballard has put it. The formations, which Ballard dubbed " rusticles ", are extremely fragile and disintegrate in a cloud of particles if touched. To protect themselves from the seawater, they secrete an acidic viscous slime that flows where gravity takes it, carrying ferric oxides and hydroxides. These form the rusticles. Charles Pellegrino comments that they seem more akin to "levels of tissue organization found in sponges or mosses and other members of the animal or plant kingdoms. Roy Collimore, a microbiologist, estimates that the bow alone now supports some tons of rusticles [91] and that they will have devoured fifty per cent of the hull within years. Red krill had appeared and an unknown organism had built numerous nests across the seabed from black pebbles. The amount of rusticles on the ship had increased greatly.

One of the worst things you can do to your body is doing nothing at all: Sitting parked on your butt can be just as dangerous as being obese, according to a study from the University of Cambridge.

Early life[edit] Beloit, Wisconsin , where Patrick was born in Patrick was born on March 25, , in Beloit, Wisconsin. She spent her off-time babysitting for a family down the road when she was not racing. They saved money to purchase a pontoon boat, but its owner did not respond to their offer. She emerged from the wreck uninjured. To help defray travel expenses, the family sold merchandise featuring Patrick and imposed a rule that prevented her from undertaking activities that would harm her public image. James Foundation Driver Development Program in James two years earlier to compete in the United Kingdom racing circuit. She successfully persuaded her father to underwrite her career. Jaguar Racing team principal Bobby Rahal organized a second test for her with the expectation it would lead to her being put in the Paul Stewart Racing development program, but it was cancelled in the summer of , after new owner Niki Lauda fired Rahal. Ford later terminated her program as they suspected the capital they gave her was being misused and felt she was not getting enough technical support. She came fourth after leading 19 laps and achieved multiple firsts for women at the track. The quartet was in contention for the victory, but retired from overheating problems. Petersburg , where she finished sixth; [32] she came eighth at the Indy Japan at Motegi. Foyt at Milwaukee Mile. Petersburg and seventh at Kansas. She raced competitively with the leaders, and finished in the same position she started, when the race was halted by rain after laps. Foyt which was overshadowed by a physical confrontation with Dan Wheldon ; [41] the two reconciled after privately meeting with IndyCar president Brian Barnhart. To begin the season , her second with Andretti Green Racing, Patrick scored her then best career Homestead finish of sixth. She followed that up with another top ten by scoring a tenth-place finish at St. As Ryan Briscoe exited his pitbox, the two cars collided, and both were eliminated from the race. Petersburg , after clashing with Raphael Matos while in ninth place. This set a new record for the highest-placed finish in Indianapolis history. This fifth-place finish was not only the highest of any of the Andretti drivers, but of any non- Penske or Chip Ganassi Racing driver for the season. Petersburg , Patrick made her first appearance in the top ten by placing seventh. Patrick twice suffered car damage at the season-opening Grand Prix of St. Petersburg , after collisions with Justin Wilson and J. Hildebrand relegated her to twelfth. Because her car failed a technical inspection, she was placed at the back of the qualifying line, and took 26th despite rain threatening to stop her setting a lap time. Having difficulty with the car setup, [72] she lost control going into turn two on Lap 68 and crashed into the outside wall. Patrick came back down the track and then hit the inside wall. Patrick started in seventh position and was ranked thirtieth. She finished in sixth place after spinning early in the race. She finished three laps down in 15th place after hitting the wall and being off the pace. Cassill, who managed to save his car, said on his radio: This decision was criticized by drivers and team owners. She started from the 22nd position and finished two spots higher than that. She finished thirty-sixth and thirty-ninth after a respective engine failure and crash. She also had an average finish of She had two top-ten finishes, an average finish of Her best result of the season was eleventh place at the fall Charlotte race, and she led a career-high 30 laps.

3: Wreck | Definition of Wreck by Merriam-Webster

A former Wall Street Journal markets editor reflects on Black Monday, 30 years ago, and how it spawned the exchange-traded fund.

Doctors warn that spending long periods seated can compress the disks in your spine and lead to back pain. One of the worst things you can do to your body is doing nothing at all: Sure, your sedentary behavior can hurt your heart and make you fat, but it might also be responsible for some more surprising, effects too. These 7 sinister side effects of living a sedentary life will have you itching to jump out of your seat. Read on to learn more—and to discover the easiest thing you can do right now to reverse the damage. When you work up a sweat, your body produces feel-good hormones called endorphins, according to the Mayo Clinic. Too busy to walk during your lunch break? Your body and mind will thank you. People who logged the most sitting time experienced a 24 percent higher risk of developing colon cancer, a 32 percent higher risk of endometrial cancer, and a 21 percent higher risk of lung cancer. And that paves the way for obesity. Large studies have consistently shown that higher levels of body fat can spike your cancer risk. Plus, a surplus of fat cells eventually produce hormones that lead to cell proliferation, a process that causes your cells to grow and divide rapidly. In a study of more than 1, adults 65 and older, the researchers found that people with a gene strongly associated with dementia were nearly twice as likely to develop it as people without the gene. The fix is simple: In fact, sedentary adults were more likely to have blood sugar levels at 5. Your swimmers can take a hit, too. The work you put in at the gym follows you to the bedroom. After surveying men, researchers from the Cedars-Sinai Medical Center in Los Angeles found that highly active men—or men that completed 3. In fact, more than two thirds of vigorous exercisers reported almost never experiencing symptoms associated with insomnia. So get up and move, the researchers suggest. While you might assume rest is the answer, research shows that movement is great pain medicine.

A very surprising, scary car crash. lol. I'm not sure if it's scary to you guys, but it sure scared me. hehe. A very surprising, scary car crash. lol. I'm not sure if it's scary to you guys, but.

Share The next time you check your credit score, you might discover it has taken a tumble because of a seemingly small mishap on your part. It ended up being reported to credit bureaus, also known as credit reporting agencies and credit reporting companies. Worst of all, the problem stemmed from a charge through automatic billing on a credit card I no longer used. The result was an point decrease in my credit score and several months of regret. My credit score rebounded, but this small oversight still haunts me. With my precautionary tale in mind, here are some other types of mishaps that can damage your credit score: Car rental reservations Planning to rent a car? If you use a debit card to make the reservation, the rental car company might require a credit screening. That can ding your credit score. Confirm the reservation with your credit card to avoid the unnecessary credit inquiry and settle the final bill with your debit card upon returning the vehicle. Past-due rent payments Fail to pay the rent on time, and the landlord might report your delinquency to credit bureaus. That way, you can salvage your good name and credit. My local library assesses a fee of 25 cents per day for each outstanding item. Get your materials in on time. And if you lose them, fess up and pay the fees. Otherwise, your credit score could take a hit. Negotiate or request a payment plan, for example. Muting the ringer on the phone or sending calls from collectors to voicemail can eventually result in a blemish in the form of a collection account on your credit report. Delinquent tax obligations Did the Internal Revenue Service or the local tax collector send you a hefty bill for unpaid taxes? If you fail to respond and work something out, expect your credit score to take a dive. But once the provider has had enough, expect to be turned over to debt collectors and subsequently reported to the three main nationwide credit reporting companies Equifax, Experian and TransUnion. Properly close the account, or it could cost you in the form of early termination penalties and a damaged credit score. Unpaid traffic citations Most of us are aware of the consequences associated with ignoring tickets issued by law enforcement. But what about tickets issued by parking services at the local university or the downtown street patrol? Ignoring citations and failing to pay them could show up as a collection in your credit profile. Closing credit cards Closing a credit card account sounds smart, but in fact it can hurt your credit score. That would in turn increase your credit utilization score, hurting your credit score. Too many credit card applications Ten percent of your FICO credit score is determined by how you shop for credit. According to Fair Isaac Corp. Even if you have used credit for a long time, opening a new account can still lower your FICO scores. The price of that one-time savings might be a lower credit score. In-house zero-interest financing Strapped for cash but in desperate need of that new mattress or laptop? But if the credit line is only equal to the total purchase amount, be prepared for a spike in your credit utilization ratio. Have you experienced a surprise hit to your credit score? Tell us about it by commenting below or on our Facebook page.

It's been 21 years since Princess Diana tragically died in a fatal car crash in Paris and, in his first-ever interview since that moment on Aug. 30, , the firefighter who tried to save Diana.

Could a Wreck-It Ralph ride be added to Tomorrowland? The iconic Magic Kingdom has announced a few updates, closures and other changes. From refurbishments to Tom Sawyer to a reconfiguration of the Tomorrowland Speedway, several changes are coming to the Disney theme park. While Disney has been vocal about some of these upcoming changes, one currently dark ride location has a veil of secrecy about it. While fans eagerly await the new Tron ride, Guardians of the Galaxy ride at Epcot and several other additions and changes, a few now-empty spaces have left fans wondering. Even though fans loved the characters there is even a live-action movie on the agenda , the ride itself was just a little disappointing. Earlier year, the ride closed for refurbishment. While the ride had only been in seasonal use, it did offer another indoor attraction during the long, hot Florida summer. Granted, the experience was a little clunky, but many people enjoyed it. Sure, the princesses will always have a place at Disney, but newer franchises need representation at the theme park, too. Given the soon-to-be-released Wreck-It Ralph 2: Ralph Breaks the Internet , announcing a new ride with this theme would be smart. A lot of excitement is building over this movie. With the limited footprint in the existing space, a theme park ride that utilizes visuals over movement would make sense. Also, the video game theme blends nicely into Tomorrowland. This past summer, the Incredibles were everywhere in the Magic Kingdom. Disneyland has incorporated the popular super hero family into many of its re-furbished attractions. RunDisney offered Incredibles-themed virtual 5Ks over the summer. Although Wreck-It Ralph does have a lot of appeal, Incredibles could hold a wider fan base. Thinking about a Wreck-It Ralph ride, it could be an opportunity for Disney to incorporate a more interactive, technology-based ride. Virtual reality rides are becoming more popular. If Disney could have guests feel as if they are inside the video game itself, the ride could become a huge hit. Currently, all of these ideas are just speculation.
