WhatsApp Leonardo Pisano Leonardo of Pisa , better known as Fibonacci, was an Italian mathematician who is most famous for his Fibonacci sequence and for popularizing the Hindu-Arabic numeral system in Europe. Here are 10 interesting facts about his life and accomplishments; and also on the Fibonacci sequence, its relation to golden ratio and its prevalence in nature. It was in Bugia that Leonardo first learned the Hindu-Arabic numeral system. He traveled extensively around the Mediterranean till around after which he returned to Pisa. During his travels he met numerous merchants and studied different numerical systems and methods of calculation. Although today the system is the most common representation of numbers, at the time it was known only to a few scholars in Europe. In , Fibonacci completed Liber Abaci Book of Calculation , a book on the Hindu-Arabic numerals and their use in arithmetical operations and practical problems. Liber Abaci was widely copied and imitated; and was instrumental in popularizing the Hindu-Arabic numeral system in Europe. Comparison between four different styles of writing Arabic numerals 3 Book of Squares is considered his masterpiece 19th century statue of Fibonacci in Camposanto, Pisa In , Fibonacci completed Liber Quadratorum Book of Square Numbers which is considered his masterpiece. The book is a collection of theorems and examines several topics in number theory. Before Fibonacci, Europe used Roman Numerals which make modern mathematics almost impossible. He advocated the use of the digits 0-9, and of place value. His also made an important contribution to the spread of decimal numerals. It goes like 0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, and so on. Though the sequence had been described in Indian mathematics long ago, it was Leonardo Fibonacci who introduced the sequence to Western European mathematics. They mate at the end of one month and by the end of the second month the female produces another pair. The rabbits never die, mate exactly after a month and the females always produce a pair one male, one female. The puzzle that Fibonacci posed was: If one calculates then one will find that the number of pairs at the end of nth month would be  $F_n$  or the nth Fibonacci number. Thus the number of rabbit pairs after 12 months would be  $F_{12}$  or The proportion is also said to be aesthetically pleasing due to which several artists and architects, including Salvador Dali and Le Corbusier, have proportioned their work close to the golden ratio. The Fibonacci sequence and the golden ratio are intimately interconnected. The ratio of consecutive Fibonacci numbers converges and approaches the golden ratio and the closed-form expression for the Fibonacci sequence involves the golden ratio. Since a drone has only one parent only a mother and no father , it has an interesting genealogical tree. Generation 1 has 1 member the male. One generation back there is also 1 member the mother. Two generations back there are 2 members the mother and father of the mother. It is found that the members in each generation going back is 1, 1, 2, 3, 5, 8, 13, 21, they follow the Fibonacci sequence. Drone Bee Ancestry Tree showing members per generation 9 Fibonacci numbers can be found in several biological settings Apart from drone bees, Fibonacci sequence can be found in other places in nature like branching in trees, arrangement of leaves on a stem, the fruitlets of a pineapple, the flowering of artichoke, an uncurling fern and the arrangement of a pine cone. Also on many plants, the number of petals is a Fibonacci number. Many plants including buttercups have 5 petals; lilies and iris have 3 petals; some delphiniums have 8; corn marigolds have 13 petals; some asters have 21 whereas daisies can be found with 34, 55 or even 89 petals. Starting with 5, every second Fibonacci number is the length of the hypotenuse of a right triangle with integer sides. Fibonacci numbers are also an example of a complete sequence. This means that every positive integer can be written as a sum of Fibonacci numbers, where any one number is used once at most. Fibonacci sequence is used in computer science for several purposes like the Fibonacci search technique, which is a method of searching a sorted array with aid from the sequence. Stock traders frequently take a cue from Fibonacci retracement to predict future share prices.
