Don't show me this again. Welcome! This is one of over 2, courses on OCW. Find materials for this course in the pages linked along the left. MIT OpenCourseWare is a free & open publication of material from thousands of MIT courses, covering the entire MIT curriculum.

At MIT this is Course By putting materials for this course on-line, we hope to encourage a dialog with colleagues in industry, government and academia about the topics covered. The current version of the lecture notes is available on the Table of Contents page. From there, users can also navigate to web pages specific to each chapter. On these pages you will find a short statement of the topics covered in the chapter, as well as a discussion of some topical items that tie to the chapter material. We hope to also add links to key resources relevant to each chapter. There is also a related blog that contains short notes on very current topics and happenings. Comments to the blog, as well as private correspondence, offer the opportunity for input from readers and colleagues in the field. The Lecture Notes and other items on this site are evolving dynamically. It explores the revolutionary advances in measuring, pricing and packaging financial risk that have reshaped finance over the last few decades. So the course touches on the usual suspects: But this is not a course in what we call the zoology of derivatives. The revolution that is risk management is about fundamental advances in the financial analysis of risk. These advances were originally inspired by models of derivatives, but their implications are much broader and deeper, and our focus is on these implications. This is a course in Corporate Finance. It is not about financial companies. It is not about hedge funds. It is not about trading strategies and how to transform a small pile of money into a larger pile of money. It is about non-financial companies. These are companies that make products and deliver services. For these companies, finance is a support function. Financial analysis in general, and risk management in particular, is supposed to be a tool for making the company execute on its strategy more effectively. It touches on all the familiar topic areas: Instead, we show how knowledge of risk management ought to reshape analysis in each of these areas.
