Attention deficit disorder affects many adults, and its wide variety of frustrating symptoms can hinder everything from your relationships to your career. But help is available—and learning about ADHD is the first step. Once you understand the challenges, you can learn to compensate for areas of weakness, take advantage of your strengths, and fulfill your potential. ADHD often goes unrecognized throughout childhood. This was especially common in the past, when very few people were aware of ADHD. Instead of recognizing your symptoms and identifying the real issue, your family, teachers, or others may have labeled you a dreamer, a goof-off, a slacker, a troublemaker, or just a bad student. Alternately, you may have been able to compensate for the symptoms of ADHD when you were young, only to run into problems as your responsibilities increase. This can be challenging for anyone, but if you have ADHD, it can feel downright impossible. The good news is that no matter how overwhelming it feels the challenges of attention deficit disorder are beatable. With education, support, and a little creativity, you can learn to manage the symptoms of adult ADHD—even turning some of your weaknesses into strengths. ADHD is just a lack of willpower. People with ADHD focus well on things that interest them; they could focus on any other tasks if they really wanted to. People with ADHD can never pay attention. People with ADHD are often able to concentrate on activities they enjoy. But no matter how hard they try, they have trouble maintaining focus when the task at hand is boring or repetitive. Everybody has the symptoms of ADHD, and anyone with adequate intelligence can overcome these difficulties. ADHD affects people of all levels of intelligence. A person with ADHD is six times more likely to have another psychiatric or learning disorder than most other people. ADHD usually overlaps with other disorders. Many adults struggle all their lives with unrecognized ADHD symptoms.

Brown, Attention Deficit Disorder: The Unfocused Mind in Children and Adults Signs and symptoms of ADHD in adults In adults, attention deficit disorder often looks quite different than it does in children—and its symptoms are unique for each individual. The following categories highlight common symptoms of adult ADHD. Do your best to identify the areas where you experience difficulty. Once you pinpoint your most problematic symptoms, you can start to work on strategies for dealing with them. Adults with ADHD can often focus on tasks they find stimulating or engaging, but have difficulty staying focused on and attending to mundane tasks. You may be easily distracted by irrelevant sights and sounds, bounce from one activity to another, or become bored quickly. Symptoms in this category are sometimes overlooked because they are less outwardly disruptive than the ADHD symptoms of hyperactivity and impulsivity—but they can be every bit as troublesome: Being easily distracted by low-priority activities or external events that others tend to ignore. Difficulty paying attention or focusing, such as when reading or listening to others. Frequently daydreaming or "zoning out" without realizing it, even in the middle of a conversation. Struggling to complete tasks, even ones that seem simple. A tendency to overlook details, leading to errors or incomplete work. Poor listening skills, for example, having a hard time remembering conversations and following directions. Getting quickly bored and seeking out new stimulating experiences. This paradoxical symptom is called hyperfocus. Hyperfocus is actually a coping mechanism for distraction—a way of tuning out the chaos. It can be so strong that you become oblivious to everything going on around you. Hyperfocus can be an asset when channeled into productive activities, but it can also lead to work and relationship problems if left unchecked.

Disorganization and forgetfulness When you have adult ADHD, life often seems chaotic and out of control. Staying organized and on top of things can be extremely challenging—as is sorting out what information is relevant for the task at hand, prioritizing the things you need to do, keeping track of tasks and responsibilities, and managing your time. Common symptoms of disorganization and forgetfulness include: Poor organizational skills home, office, desk, or car is extremely messy and cluttered Tendency to procrastinate Trouble starting and finishing projects Chronic lateness Frequently forgetting appointments, commitments,

deadlines Constantly losing or misplacing things keys, wallet, phone, documents, bills. Underestimating the time it will take to complete tasks. Impulsivity If you suffer from symptoms in this category, you may have trouble inhibiting your behaviors, comments, and responses. You might act before thinking, or react without considering consequences. You may find yourself interrupting others, blurting out comments, and rushing through tasks without reading instructions. If you have impulse problems, being patient is extremely difficult. For better or for worse, you may go headlong into situations and find yourself in potentially risky circumstances. Frequently interrupting others or talking over them Poor self-control, addictive tendencies Blurring out thoughts that are rude or inappropriate without thinking Acting recklessly or spontaneously without regard for consequences Trouble behaving in socially appropriate ways such as sitting still during a long meeting Emotional difficulties Many adults with ADHD have a hard time managing their feelings, especially when it comes to emotions like anger or frustration. Common emotional symptoms of adult ADHD include: Being easily flustered and stressed out Irritability or short, often explosive, temper Low self-esteem and sense of insecurity or underachievement Trouble staying motivated Hypersensitivity to criticism Hyperactivity or restlessness Hyperactivity in adults with ADHD can look the same as it does in kids. For many people with ADHD, however, the symptoms of hyperactivity become more subtle and internal as they grow older. Common symptoms of hyperactivity in adults include: Only a small slice of adults with ADHD, in fact, suffer from prominent symptoms of hyperactivity. Remember that names can be deceiving and you may very well have ADHD if you have one or more of the symptoms above—even if you lack hyperactivity. ADHD that is undiagnosed and untreated can have wide-reaching effects and cause problems in virtually every area of your life. Physical and mental health problems. The symptoms of ADHD can contribute to a variety of health problems, including compulsive eating, substance abuse, anxiety, chronic stress and tension, and low self-esteem. You may also run into trouble due to neglecting important check-ups, skipping doctor appointments, ignoring medical instructions, and forgetting to take vital medications. Work and financial difficulties. Adults with ADHD often experience career difficulties and feel a strong sense of underachievement. You may have trouble keeping a job, following corporate rules, meeting deadlines, and sticking to a 9-to-5 routine. Managing finances may also be a problem: The symptoms of ADHD can put a strain on your work, love, and family relationships. You may be fed up with constant nagging from loved ones to tidy up, listen more closely, or get organized. Dealing with Symptoms Together The wide-reaching effects of ADHD can lead to embarrassment, frustration, hopelessness, disappointment, and loss of confidence. The key is to find out what your strengths are and capitalize on them. It can be helpful to think about attention deficit disorder as a collection of traits that are both positive and negative—just like any other set of qualities you might possess. Along with the impulsivity and disorganization of ADHD, for example, often come incredible creativity, passion, energy, out-of-the-box thinking, and a constant flow of original ideas. Many adults with attention deficit disorder have found meaningful ways to manage their symptoms, take advantage of their gifts, and lead productive and satisfying lives. There is a lot you can do to help yourself and get your symptoms under control. Exercise and eat right. Exercise vigorously and regularly—it helps work off excess energy and aggression in a positive way and soothes and calms the body. Eat a wide variety of healthy foods and limit sugary foods in order to even out mood swings. Get plenty of sleep. Support yourself by turning off screens at least one hour before bed and getting between hours of sleep every night. Set deadlines for everything, even for seemingly small tasks. Use timers and alarms to stay on track. Take breaks at regular intervals. Avoid piles of paperwork or procrastination by dealing with each item as it comes in. Prioritize time-sensitive tasks and write down every assignment, message, or important thought. Work on your relationships. Schedule activities with friends and keep your engagements. Be vigilant in conversation: Cultivate relationships with people who are sympathetic and understanding of your struggles with ADHD. Create a supportive work environment. Make frequent use of lists, color-coding, reminders, notes-to-self, rituals, and files. If possible, choose work that motivates and interests you. Notice how and when you work best and apply these conditions to your working environment as best you can. It can help to team up with less creative, more organized people—a partnership that can be mutually beneficial. While difficult for some people with ADHD to even contemplate, regular mindfulness meditation can help you calm your busy mind

and provide greater control over your emotions. Try meditating for a short period and increase the time as you become more comfortable with the process. Blame the ADHD, not yourself. Adults diagnosed with ADHD often blame themselves for their problems or view themselves in a negative light. This can lead to self-esteem issues, anxiety, or depression. When to seek outside help for adult ADHD If the symptoms of ADHD are still getting in the way of your life, despite self-help efforts to manage them, it may be time to seek outside support. Adults with ADHD can benefit from a number of treatments, including behavioral coaching, individual therapy, self-help groups, vocational counseling, educational assistance, and medication. Professionals trained in ADHD can help you control impulsive behaviors, manage your time and money, get and stay organized, boost productivity at home and work, manage stress and anger, and communicate more clearly.

**2: Spell index for Dungeons and Dragons 5e, a D&D tool from DND-Spells**

*A guide book or travel guide is "a book of information about a place designed for the use of visitors or tourists". It will usually include information about sights, accommodation, restaurants, transportation, and activities.*

July 23, 9 Minutes Apologies to my regular readers. This week is going to be a lot more specific in terms of gaming stuff. Back to the regular hopefully more accessible stuff on my weekly post! A blue-skinned man sprints along a towering aqueduct, chased by both a blue-clad knight on griffonback and a frizzy-haired young woman on a spark-spewing sputtering helicopter. In places the pavement gives way to massive roots and fungal growths, which are being fed on by slimy four-legged bears. A wide-eyed friend beckons you towards a massive tavern. Within are familiar creatures, though you are unused to seeing them in a city. Two-legged merfolk, four-armed blue people, and humanoid elephants. Your friend invites you over. He has a proposition for you. No chance for danger whatsoever, unless any of the other eight guilds find out. Welcome to Ravnica, traveler. The Indriks just broke free. I hope you enjoy your stay. Three years ago the Magic: Today, the Dungeons and Dragons team announced that they would be releasing a campaign guide for Ravnica, one of the most popular worlds in the Magic canon. Mechanus representing Law, and the Plane of Water representing, well, water, Magic planes are more fully diverse worlds. Your DM will decide if the players are planeswalkers, having a plane-hopping adventure full of intrigue or excitement, or are Ravnican locals swept up into events of great import. Ravnica is one of these planes. These group are the ten Guilds, and they are the key to understanding Ravnica. Spellcasters claim mastery over, and align themselves with, these different forms of magic. The colours of magic can also be thought of as alignments in some sense, representing how characters view the world and generate their actions. Blue likes things Lawful, while Green leans more neutral. Each Guild represents an equal partnership between two of these five colours, for a total of ten different possible two-colour combinations. The lawmakers of Ravnica, creating byzantine legal structures that govern the plane. The Dimir peddle in secrecy. On paper, they serve as couriers and librarians. In reality, they mostly engage in more unsavoury business. The Cult of Rakdos are a group of demon-worshipping hedonists. Their circuses blur the line between pain and pleasure. The Gruul are a might-makes-right society, squabbling with each other over the remaining wild areas of Ravnica. When threatened, however, they band together to rough up the other Guilds for once. The Orzhov operate both the religious and financial heart of Ravnica. Ghostly mafiosos, the Orzhov will take care of you if you have their back. Because of their necromancy, the contracts they make can last past the grave. The Golgari exist in the literal underworld of the plane. They are equal parts farmers and garbage disposal. They represent the cycle of life, Green representing life and Black representing death. Their animal-animal and animal-human hybrids perform all sorts of useful functions on the plane. The Izzet are the innovators and engineers of the plane, inventing new types of magic and artifice. While the Azorius make the laws, the Boros are in charge of enforcing them. Not everyone enjoys the protection of a Guild. There exists vast swathes of Guildless members of Ravnican society. Whether through lack of talents, previous exile from a guild, or some sort of moral stance, they live without any Guild affiliation. As a result, their political voice is almost nothing. There has been a growing unrest from the Guildless, as they are the ones most likely to be caught in the proverbial crossfire between the others. The Rakdos are the premiere entertainers on Ravnica, while a Dimir lore bard or Boros valor bard also work within the system. Gruul make a lot of sense for standard Barbarians, but a particularly unhinged Boros Legionnaire or a Rakdos strongman also make a lot of sense. Orzhov lends themselves naturally to Clerics, especially Trickery Clerics. Azorius can represent the Order domain, and Selesnya Nature. None of the guilds seem to have any overt ascetic practices, but a Selesnyan monk or a Rakdos acrobat could work with some flavour tweaks. Selesnya and Gruul would work closely with animals and protect nature, while a Boros officer might also serve as a monster hunter of sorts. Golgari rangers might be Gloom Stalkers. Dimir seem the most innately rogueish, representing each of its archetypes well. You could have a neat Orzhov mastermind or Boros Inquisitive too. Sorcerers are an odd bunch in the magic world. The Izzet guildleader is the only remaining true dragon on the plane, so perhaps draconic sorcerers would be drawn to that guild to further their

magic. A chaotic Wild mage would also make a great fit for Izzet, while a Favoured Soul likely belongs with the angels of Orzhov or Boros. A fiendish Warlock makes most sense in Rakdos. All of the guilds have spellcasters, meaning wizards find themselves in the ranks of every guild. However Dimir, Izzet, and Simic have the most explicit focus on knowledge and magical. The party could be Guildless hired help, agents of a particular Guild, or represent a rare team-up between multiple Guilds with aligned interests. At its heart, Ravnica is about political intrigue. A noir-style game makes a lot of sense, as the different guilds vie for power or favours over other. They might employ hired help, unattached to any Guild in particular. How does the Azorius lawmage of the party react when the Gruul Barbarian roughs up an important contact, or when the Izzet evoker destroys half a city block with an explosion? What if the players are all Guildless on a plane that treats them like trash? Exposing the tyranny of the Guilds, or merely surviving, could be an interesting twist on a Ravnican campaign. Why have these talented adventurers not found a guild? What are they going to do to change things for the better? The Dimir want you to bust one of their agents out of an Azorius prison. The Boros need extra security cracking down on a Rakdos riot. The Selesnya have noticed their animals are missing, and they think the Simic have been experimenting on them. The Gruul have been stomping around too loudly, awakening an ancient evil inside a Golgari rot-farm. An Izzet scientist owes funding grant money to an Orzhov high-priest, and wants you to help him weasel his way out of it. With some tweaking, having a party represent a given Guild against nine other teams of adventurers could make for a cool mega-dungeon experience.

*The editor for Guidebook guides. It's free to get started!*

The first step to addressing the problem and getting your child the help he or she needs is to learn to recognize the signs and symptoms of ADHD. Sometimes these children are labeled as troublemakers, or criticized for being lazy and undisciplined. ADHD makes it difficult for people to inhibit their spontaneous responses—responses that can involve everything from movement to speech to attentiveness. The signs and symptoms of ADHD typically appear before the age of seven. Once you understand the issues your child is struggling with, such as forgetfulness or difficulty paying attention in school, you can work together to find creative solutions and capitalize on strengths. All kids with ADHD are hyperactive. Some children with ADHD are hyperactive, but many others with attention problems are not. Children with ADHD who are inattentive, but not overly active, may appear to be spacey and unmotivated. Kids with ADHD can never pay attention. Children with ADHD are often able to concentrate on activities they enjoy. But no matter how hard they try, they have trouble maintaining focus when the task at hand is boring or repetitive. Kids with ADHD could behave better if they wanted to. Children with ADHD may do their best to be good, but still be unable to sit still, stay quiet, or pay attention. Kids will eventually grow out of ADHD. Treatment can help your child learn to manage and minimize the symptoms. Medication is the best treatment option for ADHD. Medication is often prescribed for attention deficit disorder, but it might not be the best option for your child. Effective treatment for ADHD also includes education, behavior therapy, support at home and school, exercise, and proper nutrition. The primary characteristics of ADHD When many people think of attention deficit disorder, they picture an out-of-control kid in constant motion, bouncing off the walls and disrupting everyone around. But this is not the only possible picture. Some children with ADHD are hyperactive, while others sit quietly—with their attention miles away. Some put too much focus on a task and have trouble shifting it to something else. Others are only mildly inattentive, but overly impulsive. The three primary characteristics of ADHD are inattention, hyperactivity, and impulsivity. The signs and symptoms a child with attention deficit disorder has depend on which characteristics predominate. Which one of these children may have ADHD? The quiet dreamer who sits at her desk and stares off into space. Inattentive, but not hyperactive or impulsive. Hyperactive and impulsive, but able to pay attention. Inattentive, hyperactive, and impulsive the most common form of ADHD. However, the symptoms of inattention have consequences: By age four or five, though, most children have learned how to pay attention to others, to sit quietly when instructed to, and not to say everything that pops into their heads. So by the time children reach school age, those with ADHD stand out in all three behaviors: But when the task is repetitive or boring, they quickly tune out. Staying on track is another common problem. Children with ADHD often bounce from task to task without completing any of them, or skip necessary steps in procedures. Organizing their schoolwork and their time is harder for them than it is for most children. Kids with ADHD also have trouble concentrating if there are things going on around them; they usually need a calm, quiet environment in order to stay focused. Symptoms of inattention in children: While many children are naturally quite active, kids with hyperactive symptoms of attention deficit disorder are always moving. They may try to do several things at once, bouncing around from one activity to the next. Even when forced to sit still which can be very difficult for them their foot is tapping, their leg is shaking, or their fingers are drumming. Symptoms of hyperactivity in children: Children with impulsive signs and symptoms of ADHD also tend to be moody and to overreact emotionally. As a result, others may start to view the child as disrespectful, weird, or needy. Symptoms of impulsivity in children: Just because a child has symptoms of inattention, impulsivity, or hyperactivity does not mean that he or she has ADHD. Certain medical conditions, psychological disorders, and stressful life events can cause symptoms that look like ADHD. Before an accurate diagnosis of ADHD can be made, it is important that you see a mental health professional to explore and rule out the following possibilities: Learning disabilities or problems with reading, writing, motor skills, or language. Major life events or traumatic experiences e. Psychological disorders including anxiety , depression , and bipolar disorder. Behavioral disorders such as conduct disorder and

oppositional defiant disorder. Medical conditions, including thyroid problems, neurological conditions, epilepsy, and sleep disorders. For Children and Adults Positive effects of ADHD in children In addition to the challenges, there are also positive traits associated with people who have attention deficit disorder: The child who daydreams and has ten different thoughts at once can become a master problem-solver, a fountain of ideas, or an inventive artist. It actually may be difficult to distract them from a task that interests them, especially if the activity is interactive or hands-on. Keep in mind, too, that ADHD has nothing to do with intelligence or talent. Many children with ADHD are intellectually or artistically gifted. These frustrations and difficulties can lead to low self-esteem as well as friction and stress for the whole family. With the right support, your child can get on track for success in all areas of life. Options to start with include getting your child into therapy, implementing a better diet and exercise plan, and modifying the home environment to minimize distractions. Effective treatment for childhood ADHD involves behavioral therapy, parent education and training, social support, and assistance at school. Medication may also be used, however, it should never be the sole attention deficit disorder treatment. Parenting tips for children with ADHD If your child is hyperactive, inattentive, or impulsive, it may take a lot of energy to get him or her to listen, finish a task, or sit still. The constant monitoring can be frustrating and exhausting. Sometimes you may feel like your child is running the show. But there are steps you can take to regain control of the situation, while simultaneously helping your child make the most of his or her abilities. While attention deficit disorder is not caused by bad parenting, there are effective parenting strategies that can go a long way to correct problem behaviors. Children with ADHD need structure, consistency, clear communication, and rewards and consequences for their behavior. They also need lots of love, support, and encouragement. There are many things parents can do to reduce the signs and symptoms of ADHD without sacrificing the natural energy, playfulness, and sense of wonder unique in every child. Establish structure and stick to it. Make the rules of behavior simple and explain what will happen when they are obeyed or broken—and follow through each time with a reward or a consequence. Encourage exercise and sleep. Physical activity improves concentration and promotes brain growth. Help your child eat right. To manage symptoms of ADHD, schedule regular healthy meals or snacks every three hours and cut back on junk and sugary food. Teach your child how to make friends. Think of what the school setting requires children to do: There are many things both parents and teachers can do to help children with ADHD thrive in the classroom. ## 4: Integrations and Open API

*The D&D Extra Life Team will be streaming games during the official Extra Life Game Day and beyond!*

A periplus such as the Periplus of the Erythraean Sea was a manuscript document that listed, in order, the ports and coastal landmarks, with approximate intervening distances, that the captain of a vessel could expect to find along a shore. This work was possibly written in the middle of the 1st century CE. The periegesis, or "progress around" was an established literary genre during the Hellenistic age. An early "remarkably well-informed and interesting guidebook" was the *Hellados Periegesis* Descriptions of Greece of Pausanias of the 2nd century A. With the advent of Christianity, the guide for the European religious pilgrim became a useful guidebook. An early account is that of the pilgrim Egeria, who visited the Holy Land in the 4th century CE and left a detailed itinerary. In the medieval Arab world, guide books for travelers in search of artifacts and treasures were written by Arabic treasure hunters, magicians, and alchemists. This was particularly the case in Arab Egypt, where treasure hunters were eager to find valuable ancient Egyptian antiquities. Some of the books claimed to be imbued with magic that could dispel the magical barriers believed to be protecting the artifacts. As the appreciation of art, architecture and antiquity became ever-more essential ingredients of the noble upbringing so they predominated in the guidebooks, particularly those devoted to the Italian peninsula. Richard Lassels wrote a series of manuscript guides which were eventually published posthumously in Paris and London as *The Voyage of Italy*. Her guide to travel in France and Italy served as an essential companion for British travelers to the Continent in the early 19th century. She recognized that with the growing numbers of Britons traveling abroad after the majority of her readers would now be in family groups and on a budget. She therefore included for the first time a wealth of advice on luggage, obtaining passports, the precise cost of food and accommodation in each city and even advice on the care of invalid family members. She also devised a system of!!! Her books, published by John Murray, served as a template for later guides. The modern guidebook emerged in the s, with the burgeoning market for long distance tourism. According to scholar James Buzard, the Murray style "exemplified the exhaustive rational planning that was as much an ideal of the emerging tourist industry as it was of British commercial and industrial organization generally. After Klein died, he decided to publish a new edition in , to which he added many of his own ideas on what he thought a travel guide should offer the traveller. In , Baedeker introduced his star ratings for sights, attractions and lodgings, following Mrs. As William Wetmore Story said in the s, "Every Englishman abroad carries a Murray for information, and a Byron for sentiment, and finds out by them what he is to know and feel by every step. Eugene Fodor, a Hungarian-born author of travel articles, who had emigrated to the United States before the war, wrote guidebooks which introduced English-reading audiences to continental Europe. Scrambling on Crib Goch, Snowdonia, Wales Specialist guides for mountains have a long history owing to the special needs of mountaineering, climbing, hill walking and scrambling. The guides by W A Poucher for example, are widely used for the hill regions of Britain. There are many more special guides to the numerous climbing grounds in Britain published by the Climbers Club, for example. Digital world[ edit ] With the emergence of digital technology, many publishers turned to electronic distribution, either in addition to or instead of print publication. This can take the form of downloadable documents for reading on a portable computer or hand held device such a PDA or iPod, or online information accessible via a web site. This enabled guidebook publishers to keep their information more current. New online and interactive guides such as Tripadvisor, Wikivoyage, and Travellerspoint enable individual travelers to share their own experiences and contribute information to the guide. Wikivoyage, CityLeaves, and Travellerspoint make the entire contents of their guides updatable by users, and make the information in their guides available as open content, free for others to use. Guide book publishers[ edit ] This list is a select sample of the full range of English language guide book publishers - either contemporary or historical.
