

1: How to open a file with a different program on your Mac

To open and extract a RAR file using this app, right-click on a RAR file and select Unarchiver through the Open With option. The files inside the RAR archive would be extracted to the same direction the archive is stored at.

Read 42, times When you double-click a file on your Mac, the operating system will automatically open the file using the program assigned to that type of file. It is possible, though, to open the file using another program if you wish. To open a file on your Mac using a different program, navigate to the file you wish to open and right-click on it to see the file menu as shown below. When the file menu opens, click on the Open With option as shown in the image above. This will open the Open With submenu as shown in the image below. This submenu contains other programs that the Mac OS thinks could properly open the file and manipulate it in some way. If the program you wish to use is listed, then simply select it from this submenu and the file will open using that program. On the other hand, if the program that you wish to use is not listed, then click on the Other This will then open the Choose Application dialog where you can select a different application that you wish to use to open the file as shown in the image below. As you can see from the image above, the Choose Application dialog will display a list of applications that you can choose to open this file with. By default, this dialog will only show Recommended Applications, which means that you will only be able to select the applications that are in bold. If you wish to select a different application than a recommended one, you can change the Enable option to All Applications. This will then allow you to select any application you wish. Once you have determined the application you wish to use, select it by left-clicking on it once. If you want to make this application always open this particular file, then also put a check mark in the Always Open With check box. Then click on the Open button. The file will now open with the selected application. If you have any questions about this process please feel free to post them in our Mac OS Forum. Users who read this also read: What is a File Extension? A file extension, or file name extension, is the letters immediately shown after the last period in a file name. For example, the file extension. This extension allows the operating system to know what type of file it is and what program to run when you double-click on it. There are no particular rules regarding how an extension should be formatted other than it must How to see hidden files on a Mac Any files that start with a period on a Mac are considered hidden files in the Mac OS and are not visible from within the Finder. You can see these hidden files from within the Terminal utility by using the `ls -a` command, but that is not convenient when you wish to see all files on your computer through the Finder. This tutorial will describe how to make it so that all files on your Mac are For those who want to view the full filename, rather than having the extension removed automatically , this tutorial will provide information on how to make it so you view the extensions for all files on your computer or for just an individual one. How to restore your default file extension associations in Mac OS In the Mac OS it is possible to change the default program the operating system will use to open a file when you double-click on it. After you have changed this file association, though, you may want to reset this file association back to the default program that Mac OS was configured with when it was installed. This tutorial will explain how to restore your default file associations in Mac OS. How to add new apps to your iPad or iPhone Dock At the bottom of your iPhone or iPad screen are a series of icons that appear on every screen you switch to. This is consider the dock and can be used to hold your most used applications so that they are easily accessible from every screen. There is a limitation, though, as to how many icons you can dock at the bottom of the screen without using special apps. For the iPad you can dock 6 icons,

2: Open Any File on the Mac App Store

Apps that open files In macOS, you can change what app opens a specific file type from the file itself. Right-click a file that you want to change the default app that opens, and select Get Info.

By Malcolm Owen Friday, March 09, , In this guide, AppleInsider shows you how to permanently change the apps used for common tasks as well as which apps are used to open certain file types. Changing from the default apps to others acquired from the Mac App Store or elsewhere can be useful for those using macOS in a working capacity. Open Mail, then select the Mail menu option, then Preferences to bring up a settings window. Under the first General tab, the top item is a dropdown box labeled Default email reader. Open the dropdown and select your chosen email reader. If it is not on the list, click Select and use the following window to find the app, then click Select. Close the settings window and the Mail app. Web browser By default, Safari is set as the browser that will open for web links, but unlike Mail, the setting is actually buried within System Preferences. Click the Apple logo in the Menu then System Preferences. Select General, which is the top left-most icon in the System Preferences window. Towards the lower half of the General window is a dropdown box labeled Default web browser. Click the dropdown box, select the browser you want to use instead of Safari, and close the window. Note that, unlike changing the email client, there is no option to manually select the browser if it is not on this dropdown box list. Apps that open files In macOS, you can change what app opens a specific file type from the file itself. Right-click a file that you want to change the default app that opens, and select Get Info. In the Get Info window for the file, expand the Open With section by clicking the side arrow to bring up a dropdown box listing apps. Use this box to select the app you want to use. If the app is not listed, select Other to bring up a new window to find the application manually. Once satisfied with the alteration, select Change All. In the following window warning about the permanent change, select Continue, then close the Get Info window. Changing the app for just one file. Follow the instructions in the "Apps that open files" section, but stop before selecting Change All. At this point, this file is set up to open using the alternative app, and the window can be closed without further changes. A temporary alternative It is worth remembering that it is possible to open alternative apps on an occasional basis without going through the trouble of changing defaults. If you right-click a file and select Open With, a list of apps macOS thinks will work with it will be created, which can be used to open the alternative app for this particular instance.

3: APP File Extension - What is an .app file and how do I open it?

To open a window and see the files on your Mac, switch to the Finder by clicking the Finder icon (pictured above) in the www.enganchecubano.com. Coming to the Finder also reveals any Finder windows that might be hidden behind the windows of other apps.

When you see a document, app, or other file that you want to open, just double-click it. Change how your files are displayed To change how files are displayed in Finder windows, use the View menu in the menu bar, or the row of buttons at the top of the Finder window. You can view files as icons , in a list , in columns , or in a gallery. And for each view, the View menu provides options to change how items are sorted and arranged, such as by kind, date, or size. Learn more about customizing views. Earlier versions of macOS have a similar but less powerful gallery view called Cover Flow. More information, including detailed metadata, can be shown for each file. This is particularly useful when working with photos and media, because key EXIF data, like camera model and aperture value, are easy to locate. You can even create your own Quick Actions using Automator. Learn more about Stacks. You can also drag files into or out of the sidebar. Learn more about customizing the sidebar. Search for files To search with Spotlight, click the magnifying glass in the menu bar, or press Command+Space bar. Spotlight is similar to Quick Search on iPhone or iPad. Learn more about Spotlight. To search from a Finder window, use the search field in the corner of the window: When you select a search result, its location appears at the bottom of the window. In both Spotlight and Finder, you can use advanced searches to narrow your search results. To remove a file from the Trash, click the Trash to open it, then drag the file out of the Trash. The storage space used by those files then becomes available for other files. In macOS Sierra, you can set up your Mac to empty the trash automatically. Mon Sep 24
