## 1: How to get PDF from IBM AS/ or iSeries cheap and easy

*As for Dummies - Download as PDF File .pdf), Text File .txt) or read online. Scribd is the world's largest social reading and publishing site. Search Search.*

Maybe you would like to keep hardcopy of purchasing orders or you would like to send them to your vendor by email. I personally hate dotmatrix printers especially when there is color LaserJet available in the office: Update Feb Bellow mentioned solution still works even I wrote this article few years ago. I received many emails from you, it works and you are happy. Users do not see green screen anymore wow! In fact they view and work on many datasources at the same time. Users do not take care, they just need to see "the situation" to do the correct action, and do it simply and with no space for mistake. Some my apps just work as very modern viewers to data, some apps work as full featured frontend to AS I created dashboard style application with a lot of gauges and charts to provide overall views. As an eample of full featured application I created planning software. Planners for some strange reason love to work in Excel and then they retype plan ERP just to give MRP the "food", you may well know that ;- And any plan change means hard work. Now they works in my Excel like application, which is very easy for them to use. But this is not Excel in fact: Immediately as he types qty into "Excel-like planning sheet", such info is saved back into AS There is another much cheaper even more flexible way. The same is true for WebEDI portal for smaller vendors. Another example is MES solution working on AS data but looks like state-of-the-art very modern Windows application using ribbons, pivot grids, multilevel grids to simply drill down, charts etc. Not sure if you need more details about that. If yes, let me know see contact info on the bottom of this webpage and I may write other articles dedicated to such solutions giving to users more info, saving time, saving money, saving headcount. IT guys have basically three ways how to reach the target: I could bet the quotation will be expensive, but if you are rich company, no problem. Pretty easy to find such software, but usually it is not cheap, anyway cheaper than solution no. And many companies already have such tool but nobody think it could be used for this purpose. The traditional way would be to print out and put inside the scanner and scan it. Maybe you know that from you office, right? Well, I have checked the website and ask our IBM consultants for any advice or solution. As I already mentioned above, their solutions were cumbersome or expensive. But usually cumbersome and expensive: I was easy job. At that time when choosing proper network printer I could see as an option in the list of available windows printers our virtual PDF printer driver as we use pdfFactory. The biggest advantage of pdfFactory is that it seems to be usual printer in your Windows. What do you print to that "virtual printer" is converted to PDF file and could be saved or sent by email. Easy for users, easy for IT admins. There is local version running on singlePC or you can buy network version looking like network printer. We are users of pdfFactory Enterprise edition, it is network version. It is easy, but you should ask your IT staff to avoid any discussion with them later: If you do not have pdfFactory simply go to www. And install it to your PC with Windows operating system. Then restart your PC to make sure your PC will save configuration and load all libraries needed to operate. After restart try to print anything from any application to pdfFactory printer which is now available. It should work so I will skip details. After installation, new printer "FinePrint pdfFactory" will appear in your printers list. If you see IP address or name, simply click Next. Dialog to set up which system to connect to, usually it will show the correct name. Do not take care and click Next. Of course, you can change it later. Simply click Finish That is all for icon configuration. After you click "Finish" new icon should appear on your desktop. If you also use "PDF printer"as icon text we set up that in the step 3 you may find something like me. See the screenshot bellow. Now we will configure printer setting. In this screen input "Workstation ID: Select "Printer" as a "Type of emulation". You can change "Host code-page" setting but usually it is setup automatically. And select "Printer" as a "Type of emulation". In that case input your logon name and password. In some cases no logon window is displayed. We need to configure the page and set up printer settings. Click to STOP button. Open File menu and click to "Printer Setup". New dialog window will open. Click to "FinePrint pdfFactory" printer name and click to the button "Setup" Click to "FinePrint pdfFactory" to highlight and click to "Setup" button In Properties dialog set paper size of your choice, usually

letter or A4. Checkbox "Emulate printer" and in the combo box on the right select any printer you usually use. If you do not check box "Emulate printer", then you may face problem with margins on exported PDF file. And you have to change "Show dialog" to option " no - no view, no send". Type or browse your favorite folder for storing PDF files. It could be for example C: And close dialog window by clicking OK buttun. Save all settings by clicking to "Save all settings now" button Open File menu again and select "Page Setup" as we need to set up paper size used to calculate PDF virtual paper size. Set up everything to by same as on the screenshot above. Later you can try to change Set up form size. But you can later try to change some setting like to switch on using raster fonts or printing bold as normal. Well, that is all we need to set up. After a few seconds new document. What to do if it does not work? If it works go to step 2, if not try to fix the problem as you would do with usual Windows printer 2. If not restart the session. Usually the problem is in report format. In this case the document raise "Message Waiting" in the spool. Simply type 7 messsages and the G as Go and enter. Document should be saved in PDF file. If you find troubles, let me know. And I would be happy to hear any feedback from you.
