*The [www.enganchecubano.com](http://www.enganchecubano.com) is a root package for all classes of [www.enganchecubano.com](http://www.enganchecubano.com) library which are either directly in it like Document or indirectly through several subpackages. [www.enganchecubano.com](http://www.enganchecubano.com)s The [www.enganchecubano.com](http://www.enganchecubano.com)s package provides classes which are used for representing document as image(s) or a plain text.*

Words for Java supports many popular document formats. The distinct advantage of Aspose. Words is the great extent to which it supports the DOC format. It is incredibly hard to find another technology that has the same level of support for many important DOC features other than in Microsoft Word itself. The API allows you to convert documents from any supported format to any other supported format with just two lines of code. It is really that simple! Words for Java as a fully featured reporting solution. You can design reports in Microsoft Word and then allow Aspose. Words for Java to populate documents with data from a number of data sources, keeping the mail merge setting preserved. Words for Java allows developers to use standard Microsoft Word mail merge fields in reports. Additionally, you can use the Aspose. Words for Java extended syntax for mail merge fields to perform more complex tasks during the mail merge operations such as inserting images or repeatable regions. The data to drive your reports or mail merges can come from ResultSet objects, business objects or from a completely custom data source. Programming with Document Object Model Aspose. Words for Java API allows developers to create, build, modify, parse and examine loaded documents using our intuitive document object model that consists of over classes. Furthermore, all drawing objects including shapes, TextBoxes, images, OLE objects and controls are supported through this document object model, thus allowing you to perform many tasks such as inserting watermarks in pages or extracting images from a pre-existing document. Import process is resilient to documents that are not well formed, that is; invalid or unrecognized elements or attributes can safely be ignored during the import. Words for Java API also provides useful utility features such as joining or splitting documents, copying fragments between documents, protecting and un-protecting documents, modifying document properties and inserting HTML fragments into documents. Words for Java is built using managed code that does not need Microsoft Office or Microsoft Word to be installed on the machine to work with Word document formats. It is a perfect Microsoft Word automation alternative in terms of supported features, security, stability, scalability, speed and price. Words, we increased efficiency at the organizational processes because we reduce the time spent in technical support activities. Now we can say that we are only focused on our core business. Words has been a very satisfying and easy to implement solution. One of the best features being the quick time in which large documents are generated. Words has saved us a lot of time, effort and money.
