

1: Professional Development - Early Childhood Australia

Australasian Journal of Correctional Staff Development (AJCSD) Somebody's mum, somebody's dad: Parents as offenders and offenders as parents in New South Wales.

Anyone who would like to submit a manuscript is advised to carefully read the aims and scope section of this journal. Manuscripts submitted to AJAS should be prepared according to the following instructions. Emphasis will be placed on studies involving farm animals such as cattle, buffaloes, sheep, goats, pigs, horses, and poultry. Studies for the improvement of human health using animal models may also be publishable. AJAS will encompass all areas of animal production and fundamental aspects of animal sciences: AJAS is subdivided into 10 sections. Animal Breeding and Genetics: Copyrights of all published materials are owned by AAAP. Every author should meet all of these four conditions. After the initial submission of a manuscript, any changes whatsoever in authorship adding author s , deleting author s , or re-arranging the order of authors must be explained by a letter to the editor from the authors concerned. This letter must be signed by all authors of the paper. Copyright assignment must also be completed by every author. Corresponding author and first author: AJAS allows a multiple corresponding authorship maximum two for one article. Only one author should correspond with the editorial office for one article. AJAS accepts notice of equal contribution for the first author when the study was clearly performed by co-first authors maximum two. Correction of authorship after publication: AJAS does not correct authorship after final acceptance unless a mistake has been made by the editorial staff. Authorship may be changed before final acceptance when the authorship correction is requested by all of the authors involved with the manuscript. Originality, Plagiarism, and Duplicate Publication Submitted manuscripts must not have been previously published and not be under consideration for publication elsewhere. No part of the accepted manuscript should be duplicated in any other scientific journal without the permission of the editorial board of AJAS. Submitted manuscripts are screened for possible plagiarism or duplicate publication by CrossCheck upon receipt by the journal. If plagiarism or duplicate publication related to the papers of this journal is detected, the manuscripts may be rejected, the authors will be announced in the journal, and their institutions will be informed. There will also be penalties for the authors. A letter of permission is required for any and all material that has been published previously. It is the responsibility of the author to request permission from the publisher for any material that is being reproduced. This requirement applies to text, figures, and tables. Secondary Publication It is possible to republish manuscripts if they satisfy the conditions of secondary publication of the ICMJE Recommendations [http:](http://) Examples of potential conflicts of interest are financial support from or connections to companies, political pressure from interest groups, and academically related issues. In particular, all sources of funding applicable to the study should be explicitly stated. The manuscript must include a statement of IACUC compliance that should appear as the first item in the Methods section. If necessary, the editor or reviewers may request copies of these documents to resolve questions about IACUC approval and study conduct. AJAS retains the right to reject any manuscript on the basis of unethical conduct or misconduct of animal studies. Process for Managing Research and Publication Misconduct When the journal faces suspected cases of research and publication misconduct such as redundant duplicate publication, plagiarism, fraudulent or fabricated data, changes in authorship, an undisclosed conflict of interest, ethical problems with a submitted manuscript, complaints against editors, and so on, the resolution process will follow the flowchart provided by the Committee on Publication Ethics [http:](http://) The discussion and decision on the suspected cases will be carried out by ethics committee of AJAS. Editorial Responsibilities The editorial board will continuously work to monitor and safeguard publication ethics: The editors maintain the following responsibilities: If there are difficulties, authors should contact the editorial office [http:](http://) The editor-in-chief has full responsibility for the papers submitted, which are evaluated in the order received. At the initial stage, the editor-in-chief may ask the associate editors to evaluate submitted papers for suitability for further review. Each paper that is deemed

suitable will be evaluated by at least two members of the editorial board or other scientifically qualified reviewers. The editor-in-chief handles all correspondence with the author and makes the final decision as to whether the paper is recommended for acceptance or rejection, or needs to be returned to the author for revision. A reviewer may not be from the same institution as the author. Reviewers should examine the paper and return it with their report to the editor-in-chief as soon as possible, usually within 3 weeks. The identity and the report of the reviewers are made known to the editor-in-chief, but only the anonymous report is routinely sent to the author. The anonymity of the reviewers is preserved unless it is desired otherwise by all parties involved. The reviewer recommends acceptance, acceptance after revision, resubmission after revision, or rejection. If both reviewers recommend acceptance or rejection, the decision stands. When their opinions differ, then the editor-in-chief may ask a third reviewer or associate editor to decide on the acceptance or rejection of that paper. The editor-in-chief may have to decide whether to accept or reject a manuscript for which review reports are overdue if the review process has not been completed within 2 months. Papers needing revision will be returned to the corresponding author, and the author must return the revised manuscript to the editor-in-chief within 4 weeks; otherwise, the author will be notified that the paper has been withdrawn. The editor-in-chief may send the revised manuscript to associate editors to examine whether the manuscript has been revised as suggested by the reviewers. If a paper is not suitable for publication, the corresponding author will be notified with a statement of reasons for rejection. A letter to the editor-in-chief presenting reasons why the decision should be reconsidered will be given due consideration. Most papers that eventually are published are first returned for revision. Common reasons for requesting revision are failure to follow style and form, lack of clarity or brevity, questions of fact or theory, poor organization of tabular material, and poor English. All pages should be numbered consecutively in the top right hand corner, beginning with the title page. The lines on all pages, including those pages for references and figure legends, must be numbered consecutively in the left margin, beginning with number one at the top of the title page. Weights and measures must be expressed in the SI unit metric system and temperatures in the Celsius centigrade scale. Tables, double-spaced, should be as few and as simple as is feasible. Each table should be on a separate sheet. The legends for figures should be typed on a separate sheet. Photographs should be carefully prepared so that a clear image can be printed. Manuscripts will be edited in the order received, and accepted papers will be published in the order submitted if at all possible. Authors whose native language is not English are strongly encouraged to have their manuscripts proofread prior to submission. Authors must declare any financial support or relationships that may pose a conflict of interest. Manuscript preparation is different according to the publication type, including Original Articles, Reviews, Technical Notes, Editorials, Book Reviews, and Correspondence. Other types may also be negotiated with the editorial board of AJAS. Original Articles Original Articles are reports of basic investigations. Although there is no limitation on the length of the manuscripts, the editorial board may abridge excessive illustrations and large tables. The manuscript for an Original Article should be organized in the following sequence: The figures may be submitted as separate files. The title of the manuscript should be typed in bold-faced print using both upper and lower case letters and set in the center of the page. Although the title should be as brief as possible, it is recommended to include the animal species involved in the research when applicable. Abbreviations are not permitted in the title. Full names of all authors should be provided with the family name in italics. Indications of professorial rank or other professional titles should not be used. Naming an author on a paper implies that the person named is aware of the research reported and agrees with and accepts responsibility for any results or conclusions reported. The address of the institution where the research was conducted should include the name of the institution, city, zip code, and country. The abstract, consisting of no more than words, appears on a separate page following the title page. The abstract should summarize pertinent results in a brief but understandable form. An unstructured abstract should be one paragraph without sections. References should never be cited in the abstract. Abbreviations that appear in the abstract that are not included in the standard abbreviation listing Appendix 2 must be defined before they are first used. The term "Keywords" should appear in bold followed

by a colon. The first letter of each keyword is capitalized and keywords are separated by semicolon. Keywords should include the animal species, variables tested, and the major response criteria. Keywords must be selected from the CAB Thesaurus available from <http://> First subheadings appear at the left margin on a separate line in bold-faced print, are not followed by punctuation, and only the first word is capitalized. First subheadings are used when subsections consist of several paragraphs. Second subheadings appear at the beginning of the first line of a paragraph. They are italicized and do not require labeling a, b, c, etc. Materials and Methods Animals, experimental design, and diet Animals 5 Introduction The introduction starts on a new page following the abstract. The introduction briefly justifies the research and specifies the hypotheses to be tested. Extensive discussion of relevant literature should be included in the discussion of results, not in the introduction. To minimize length and avoid redundancy, generally no more than three references should be cited to support a specific concept. If specimens from human subjects were used in research, the authors must certify that the approval of the research from an appropriate IRB was obtained. A clear description or original reference is required for all biological, analytical, and statistical procedures used in the experiment. All modifications of procedures must be explained.

3: Amanda Muller – “The Conversation”

How is Australasian Journal of Correctional Staff Development (career publication) abbreviated? AJCSD stands for Australasian Journal of Correctional Staff Development (career publication). AJCSD is defined as Australasian Journal of Correctional Staff Development (career publication) very rarely.

Countering violent extremism in Indonesia: Initial efforts involved police attempting to develop relationships of trust with terrorists in custody. Today, a broader range of strategies are employed, from promoting peace among youth and thwarting the allure of extremist narratives, to managing prisoners and assisting former terrorists reintegrate with society. Where government has fallen short, civil society organisations CSOs often fill the gaps, and a number of dedicated practitioners now have invaluable experience, local contacts, and the specific knowledge required for countering extremism in the Indonesian context. CSOs also possess greater levels of trust among the communities they engage than security-centric state agencies could possibly hope to achieve. Yet instead of exploiting these civil society resources, the BNPT has largely preferred an independent and top-down approach to CVE initiatives, collaborating if and when assistance is required. The Indonesian government should make better use of the unique legitimacy and expertise of civil society organisations.
