

1: CADE: Conference on Automated Deduction

This volume contains the papers presented at the 19th International Conference on Automated Deduction (CADE) held 28 July-2 August in Miami Beach, Florida, USA.

CADE is the major international forum at which research on all aspects of automated deduction is presented. Both well-established workshops and newer ones are encouraged. Similarly, proposals for workshops with a tight focus on a core automated reasoning specialization, as well as those with a broader, more applied focus, are very welcome. Please provide the following information in your application document: Why is the workshop relevant for CADE? In the latter case information on previous meetings should be given e. Tutorials are expected to be half-day events, with a theoretical or applied focus, on a topic of interest for CADE. Proposals should provide the following information: CADE will take care of printing and distributing notes for tutorials that would like this service. Further system competition proposals are solicited. The goal is to foster the development of automated reasoning systems in all areas relevant for automated deduction in a broader sense. Proposals should include the following information: In the latter case information on previous competitions should be given. Submissions can be made in the categories regular papers and system descriptions. The page limit in Springer LNCS style is 15 pages for regular papers and 10 pages for system descriptions. Submissions must be unpublished and not submitted for publication elsewhere. They will be judged on relevance, originality, significance, correctness, and readability. System descriptions should contain a link to a working system and will also be judged on usefulness and design. Proofs of theoretical results that do not fit in the page limit, executables of systems, and input data of experiments should be made available, via a reference to a website or in an appendix of the paper. Reviewers will be encouraged to consider this additional material, but submissions must be self-contained within the respective page limit; considering the additional material should not be necessary to assess the merits of a submission. Formatting instructions and the LNCS style files can be obtained at <http://www.springer.com/lncs>. The award recognizes a paper that the Program Committee collegially evaluates as the best in terms of originality and significance, having substantial confidence in its correctness. Overall technical quality, completeness, scholarly accuracy, and readability are also considered. Characteristics associated with a best paper include, for instance, introduction of a strong new technique or approach, solution of a long-standing open problem, introduction and solution of an interesting and important new problem, highly innovative application of known ideas or existing techniques, and presentation of a new system of outstanding power. Under exceptional circumstances, the Program Committee may give two awards ex aequo or give no award. At CADE we also intend to award the best student paper details will follow.

2: Automated Deduction Cade 18 | Download eBook PDF/EPUB

The refereed proceedings of the 19th International Conference on Automated Deduction, CADE , held in Miami Beach, FL, USA in July The 29 revised full papers and 7 system description papers presented together with an invited paper and 3 abstracts of invited talks were carefully reviewed and selected from 83 submissions.

3: Conference on Automated Deduction (CADE)

This book constitutes the refereed proceedings of the 19th International Conference on Automated Deduction, CADE , held in Miami Beach, FL, USA in July

4: Ullrich Hustadt's Papers and Publications

CADE is the major international forum at which research on all aspects of automated deduction is presented. The first conference was held in Previous CADEs have been mostly biennial, and annual conferences are planned starting in
