Journal of Comparative Family Studies, 34(3), Sociology professors Kerr and Beaujot analyze the demographics of impoverished families. Drawing on data from Canada's annual Survey of Consumer Finances, the authors consider whether each family had one or two parents, the age of single parents, and the number of children in each household.

2: User Interface Bibliography - CSCI User Interface Design & Programming

This site was created by Joan Wamania in fulfillment of requirements for the course CSS Latino Health Issues taught by Dr. Szkupinski Quiroga at Arizona State University, Spring

This example is based on the APA style guide, but your instructor might give you other formatting instructions. Many annotations evaluate the quality of scholarship in a book or article. Your findings can be positive, negative, or mixed. Your professor might also want you to explain why the source is relevant to your assignment. The evolution and impact of child benefits. Eds , A question of commitment: Wilfrid Laurier University Press. Ken Battle draws on his research as an extensively-published policy analyst, and a close study of some government documents, to explain child benefits in Canada. He outlines some fundamental assumptions supporting the belief that all society members should contribute to the upbringing of children. His comparison of Canadian child poverty rates to those in other countries provides a useful wake-up to anyone assuming Canadian society is doing a good job of protecting children from want. He pays particular attention to the National Child Benefit NCB , arguing that it did not deserve the criticism it received from politicians and journalists. However, Battle relies too heavily on his own work; he is the sole or primary author of almost half the sources in his bibliography. However, Battle does offer a valuable source for this essay, because the chapter provides a concise overview of government-funded assistance currently available to parents. This offers context for analyzing the scope and financial reality of child poverty in Canada. Child poverty and family structure in Canada, Journal of Comparative Family Studies, 34 3 , Sociology professors Kerr and Beaujot analyze the demographics of impoverished families. They analyze child poverty rates in light of these demographic factors, as well as larger Rules! The text and the reference list should be double-spaced. Numbering starts on the title page, at the top right of the page. Reference list entries must have a hanging indent to do this in Microsoft Word , click Format, then Paragraph, then Special, and choose Hanging. There should be 1 inch 2. Use Times Roman font, or a similar serif font. Each paragraph should be indented.

3: Extreme Heat Bibliography|Extreme Heat

In , Aristotle founded his own school, the Lyceum, in Athens, where he spent most of the rest of his life studying, teaching and writing.

However, many students are acquainted with Ubuntu and so I take the easy road of encouraging use of Ubuntu in this class. Just the same, except in special circumstances such as hardware compatibility problems due to use of recently released hardware or hardware lacking a history of Linux support I stand on my preference. The Canonical team is trying so hard to make Ubuntu resemble Windows that they are in real danger of success. J2ObjC supports most Java language and runtime features required by client-side application developers, including exceptions, inner and anonymous classes, generic types, threads and reflection. JUnit test translation and execution is also supported. J2ObjC is currently between alpha and beta quality. Several Google projects rely on it, but when new projects first start working with it, they usually find new bugs to be fixed. J2ObjC does not provide any sort of platform-independent UI toolkit, nor are there any plans to do so in the future. Killer Game Programming in Java. Java in a Nutshell. Java Foundation Classes in a Nutshell: Out of date but still useful. Java Examples in a Nutshell: A Tutorial Companion to Java in a Nutshell. Graphic Java 2, Volume II: James Gosling, et al. He was a member of the local scientific society and hoped for a future career in science. At the age of 18 he moved to London, supporting himself as an assistant to a surgeon in private practice on White Chapel Road, where he had the opportunity to concern himself with blood-letting, tooth extraction etc. A few months later, in , he was allowed to commence work at the laboratory of The Pharmaceutical Society in Bloomsbury Square, London, where he made great progress and concentrated his efforts in organic chemistry. In he became assistant to professor Redwood and subsequently became research assistant to Michael Faraday "chemist, physicist and one of the greatest scientists of all times" in some of his experiments on gases. He became ill and spent the next three years recuperating in Dartmoor. Down lectured at Tropoint in chemistry and wanted to continue research on organic chemistry, but when his father died in he entered medical school at age 25 in the London Hospital, largely for financial reasons. He excelled as a student, winning a gold medal for physiology, and graduating in with top marks, coming second to Sir William Broadbent , and after a brief period was elected to the Royal College of Surgeons. Down was predicted a brilliant career at the university hospital, but surprised his teacher when he, in , became resident physician and subsequently medical superintendent at the Earlswood Asylum for Idiots in Surrey. He was elected assistant physician to the London Hospital in shortly after Mr. Jonathan Hutchison had been elected assistant surgeon. He was conferred doctor of medicine in London in Down wanted to work for the then hitherto gravely neglected mentally retarded children, and for a period of ten years he shared his time between the Earlswood institution for the mentally retarded and his London practice. Down became a lecturer on materia medica and therapeutics at the London Hospital Medical College and afterwards lecturer in the principles and practice of medicine. This resulted in a model for the care of the mentally ill in the United Kingdom. He published on oedema and its management and on the classification of mental disease. He was an early protagonist for training the mentally retarded. In he moved to set up consultant practice in London, and the next year established an institution at Teddington for training mentally retarded children of the wealthier classes, naming it Normansfield after his friend, Norman Wilkinson. This was the first institution of its kind. Here he was succeeded by his son. He became a fellow of the Royal College of Physicians in He published relatively little, but was awarded several medals for his publications on psychiatry. It is earnest and persistent work. Down was a man of liberal views and an advocate of higher education for women and strongly disagreed with the popular supposition that this would make them liable to produce feeble-minded offspring! A man of charming manners, he enjoyed entertaining his friends and involved himself in public duties, becoming alderman of Middlesex County Council. He had what was called a severe bout of influenza in and never recovered completely. One morning in at Normansfield he collapsed at his breakfast and was dead 10 minutes later at his home in Hampton Wick. Those who have given any attention to congenital mental lesions, must have been frequently puzzled how to arrange, in any satisfactory way, the different classes of this defect which may have come under their observation. Nor will the difficulty be lessened by an appeal to what has been written on the subject. The systems of classification are generally so vague and artificial, that, not only do they assist but feebly, in any mental arrangement of the phenomena which are presented, but they completely fail in exerting any practical influence on the subject. Moreover, he may be pressed as to the question, whether the supposed defect dates from any cause subsequent to the birth or not. Has the nurse dosed the child with opium? Has the little one met with any accident? Has the instrumental interference which maternal safety demanded, been the cause of what seems to the anxious parents, a vacant future? Can it be that when away from the family attendant the calomel powders were judiciously prescribed? Can, in fact, the strange anomalies which the child presents, be attributed to the numerous causes which maternal solicitude conjures to the imagination, in order to account for a condition, for which any cause is sought, rather than hereditary taint or parental influence. Will the systems of classification, either all together, or any one of them, assist the medical adviser in the opinion he is to present, or the

suggestions which he is to tender to the anxious parent? I think that they will entirely fail him in the matter, and that he will have in many cases to make a guarded diagnosis and prognosis, so guarded, in fact, as to be almost valueless, or to venture an authoritative assertion which the future may perhaps confirm. I have for some time had my attention directed to the possibility of making a classification of the feeble-minded, by arranging them around various ethnic standards, -- in other words, framing a natural system to supplement the information to be derived by an inquiry into the history of the case. I have been able to find among the large number of idiots and imbeciles which come under my observation, both at Earlswood and the out-patient department of the Hospital, that a considerable portion can be fairly referred to one of the great divisions of the human race other than the class from which they have sprung. Of course, there are numerous representatives of the great Caucasian family. Several well-marked examples of the Ethiopian variety have come under my notice, presenting the characteristics malar bones, the prominent eyes, the puffy lips, and retreating chin. The woolly hair has also been present, although not always black, nor has the skin acquired pigmentary deposit. They have been specimens of white Negroes, although of European descent. Some arrange themselves around the Malay variety, and present in their soft, black, curly hair, their prominent upper jaws and capacious mouths, types of the family which people the South Sea Islands. Nor has there been wanting the analogues of the people who with shortened foreheads, prominent cheeks, deep-set eyes, and slightly apish nose, originally inhabited the American Continent. The great Mongolian family has numerous representatives, and it is to this division, I wish, in this paper, to call special attention. A very large number of congenital idiots are typical Mongols. So marked is this, that when placed side by side, it is difficult to believe that the specimens compared are not children of the same parents. The number of idiots who arrange themselves around the Mongolian type is so great, and they present such a close resemblance to one another in mental power, that I shall describe an idiot member of this racial division, selected from the large number that have fallen under my observation. The hair is not black, as in the real Mongol, but of a brownish colour, straight and scanty. The face is flat and broad, and destitute of prominence. The cheeks are roundish, and extended laterally. The eyes are obliquely placed, and the internal canthi more than normally distant from one another. The palpebral fissure is very narrow. The forehead is wrinkled transversely from the constant assistance which the levatores palpebrarum derive from the occipito-frontalis muscle in the opening of the eyes. The lips are large and thick with transverse fissures. The tongue is long, thick, and is much roughened. The nose is small. The skin has a slight dirty yellowish tinge, and is deficient in elasticity, giving the appearance of being too large for the body. The Mongolian type of idiocy occurs in more than ten per cent. They are always congenital idiots, and never result from accidents after uterine life. They are, for the most part, instances of degeneracy arising from tuberculosis in the parents. They are cases which very much repay judicious treatment. They require highly azotised food with a considerable amount of oleaginous. They have considerable power of imitation, even bordering on being mimics. They are humorous, and a lively sense of the ridiculous often colours their mimicry. This faculty of imitation may be cultivated to a very great extent, and a practical direction given to the results obtained. They are usually able to speak; the speech is thick and indistinct, but may be improved very greatly by a well-directed scheme of tongue gymnastics. The co-ordinating faculty is abnormal, but not so defective that it cannot be greatly strengthened. By systematic training, considerable manipulative power may be obtained. The circulation is feeble, and whatever advance is made intellectually in the summer, some amount of regression may be expected in the winter. Their mental and physical capabilities are, in fact, directly as the temperature. The improvement which training effects in them is greatly in excess of what would be predicted if one did not know the characteristics of the type. The life expectancy, however, is far below the average, and the tendency is to the tuberculosis, which I believe to be the hereditary origin of the degeneracy. Apart from the practical bearing of this attempt at an ethnic classification, considerable philosophical interest attaches to it. The tendency in the present day is to reject the opinion that the various races are merely varieties of the human family having a common origin, and to insist that climatic, or other influences, are insufficient to account for the different types of man. Here, however, we have examples of retrogression, or at all events, of departure from one type and the assumption of the characteristics of another. If these great racial divisions are fixed and definite, how comes it that disease is

able to break down the barrier, and to simulate so closely the features of the members of another division. I cannot but think that the observations which I have recorded, are indications that the differences in the races are not specific but variable. These examples of the result of degeneracy among mankind, appear to me to furnish some arguments in favour of the unity of the human species. On the condition of the mouth in idiocy. Observations on an ethnic classification of idiots. Clinical lectures and reports by the medical and surgical staff of the London Hospital, , 3: On the education and training of the feeble in mind. Six Keys to Bodybuilding Success 1. Plan an orderly and thorough routine to train the entire body. Make a commitment to stick to your routine for four to six weeks to realize the changes and benefits, develop perseverance and create a habit. Establish enthusiasm for your training, the driving force to perform successfully. Ease into an appropriate training program with a wholesome, thoughtful nutritional plan: Be confident from the beginning that the application of these sound principles will produce the desired results. Because behavioral research indicates that it takes 90 days to prepare for change, build a new behavior, become confident in the face of high-risk triggers, and move past the likelihood of relapse. Brain research also suggests that it takes a few months of practicing a new behavior to create permanent change. Listen to what some other people have said about having the Proper Attitude: Unless you want to lift beyond your limits to get stronger, to achieve new goals, and to be satisfied, you got to lift past these challenges, and still lift the things you think are impossible to really understand how your true strength will show. You can never achieve great success without great exertion. The amount of work is the same. Advice from Wise Persons "Strength does not come from winning. Your struggles develop your strengths. When you go through hardships and decide not to surrender, that is strength. The discipline and dedication and sacrifices are incomprehensible to the thousands, standing outside looking in, who are capable of joining, yet unwilling to pay the price of admission. The more efficient your body, the better you feel and the more you will use your talent to produce outstanding results. What a distorted paradigm! I do it as something to keep me alive. We all need a little discipline. Exercise is my discipline. Thoughts are mere dreams until you put them into practice. The most important day of your life is today. It is this, that in all things distinguishes the strong soul from the weak" - Thomas Carlyle "I have found the Iron to be my greatest friend. It never freaks out on me, never runs. Friends may come and go. But two hundred pounds is always two hundred pounds" - Henry Rollins.
