FIDIC represents the consulting engineering industry both globally and domestically. What do they do? The purpose of these standard forms is to define the contractual relationship between the parties and to apportion risks between the contractor and the employer. FIDIC states that their contracts allocate risks fairly to the party that is best able to bear and control that risk. It is important to remember that the FIDIC forms represent a starting point for the preparation of a construction contract. However, they are routinely amended to reflect the particular characteristics of each project and the requirements of the parties. The main forms are differentiated by the colour of their covers. The choice of form depends on the type of project being contemplated. However, the Green Book may also be suitable for simple or repetitive work. There is no engineer and payments are made in monthly intervals. This was updated and amended over four editions. Then in 1999 FIDIC released a totally new set of standard forms of contract, including a brand new version of the Red Book, which superseded the original version of the Red Book. The Red Book is the FIDIC recommended form of contract for building or engineering works where the employer has been responsible for nearly all the design. In fact FIDIC claim that the Red Book is the most widely used international construction contract where most of the works have been designed by the employer. A key feature of the Red Book is that payment is made according to bills of quantities i.e. a document in which materials, plant, and labour and their costs are itemised, although payment can also be made on the basis of agreed lump sums for items of work. The Red Book is administered by the engineer a third party rather than the contractor or the employer. The engineer will also be responsible for monitoring the construction work but still keeping the employer fully informed so that he may make variations and certifying payments. Where the project is funded by an MDB but the employer is not responsible for the design, the parties should not use the Pink Book, but use and amend one of the other FIDIC forms of contract. The Yellow Book is a lump sum price contract with payments made according to achieved milestones on the basis of certification by the engineer like the Red Book, the engineer administers the contract. The contractor is also subject to a fitness-for-purpose obligation in respect of the completed project. These contracts therefore place the overall responsibility for the design and construction of the project on the contractor. The Silver Book is used where the certainty of price and completion date is important. These are projects where the employer takes total responsibility for the design, construction, maintenance and operation of a project and wishes to pass the responsibility in respect of construction to the contractor. There is no engineer under the Silver Book as his responsibilities are assumed by the employer. Similar to the Yellow Book, the contractor is also subject to a fitness-for-purpose obligation in respect of the completed project. The Gold Book is therefore suitable where a long-term operation and maintenance commitment is required along with design and build obligations. The contractor must operate and maintain the completed project on behalf of the employer for a period of typically 20 years from the date of the Commissioning Certificate, which is issued at completion of construction of the project. During this 20 year period the contractor must meet certain targets and at the end of this period the project must be returned to the employer in an agreed condition. However, the contractor has no responsibility for financing the project or ensuring its long-term success. However, this form of contract can also be adapted for contracts that include or consist entirely of contractor-designed works. This form of contract is used to appoint consultants to provide services to the employer such as feasibility studies, design, contract administration and project management. The White Book typically forms the basis of the agreement between the consultant and the employer where the construction and engineering works are being undertaken pursuant to a FIDIC contract. Our geographic strength means we can offer local market knowledge combined with global reach. We are recognised as leading practices in each of our domestic markets and one of the pre-eminent global firms advising on the
