

## 1: 3D printing with Windows 10 - Windows Hardware Dev Center

*Try this if Windows Update can't find a driver for your printer, and the printer didn't come with software that installs a driver. For Windows To print webpages using Internet Explorer, click the Tools button, select Print, and then select Print again.*

Fix printer problems in Windows 7 and Windows 8. To install a printer In most cases, all you have to do to set up a printer is to connect it to your PC. Swipe in from the right edge of the screen, tap Settings, and then tap Change PC settings. Tap or click PC and devices, and then tap or click Devices. If your printer is installed, it should appear under Printers. Click Add a printer. In the Add Printer wizard, click Add a local printer. On the Choose a printer port page, make sure that the Use an existing port button and the recommended printer port are selected, and then click Next. On the Install the printer driver page, select the printer manufacturer and model, and then click Next. If none are available and you have the installation CD, click Have Disk, and then browse to the folder where the printer driver is located. For additional help, consult the printer manual. Complete the additional steps in the wizard, and then click Finish. Tip You can print a test page to make sure the printer is working correctly. In the Add Printer wizard, click Add a network, wireless or Bluetooth printer. In the list of available printers, select the one you want to use, and then click Next. If your computer is connected to a network, only printers listed in Active Directory for your domain are displayed in the list. If prompted, install the printer driver on your computer by clicking Install driver. Tip Available printers can include all printers on a network, such as Bluetooth and wireless printers or printers that are plugged into another computer and shared on the network. You might need permission to install some printers. You can confirm the printer is working by printing a test page.

## 2: Can't select printer

*I got as far as selecting Microsoft as the Manufacturer, but there was nothing in the Printer list related to printing PDF's. I will need to see if there is anyway that I can find a Microsoft PDF driver.*

Fix printer problems after updating or upgrading to Windows 10 Content provided by Microsoft Applies to: If your PC is running Windows 10 S, some printers might not work with it, or they might have limited functionality. For more info, see Device support on Windows 10 S. Scroll down the list of Devices to see if your printer name and icon appears in the Unspecified section. Once you know whether your printer is in an unspecified state, follow these steps to try and fix the problem. Make sure your printer is turned on and connected Check the power. Check the cables wired printers. Check the wireless connection wireless printers. Many printers have a button that displays a blue wireless icon when a wireless connection option for the printer is available. Fix network connection issues in Windows Note If you use wireless access points, extenders, or multiple wireless routers with separate SSIDs, make sure you are connected to the same network as the printer for your PC. Try removing and reinstalling the printer. If your printer is on and connected to the network, Windows should find it easily. Available printers can include all printers on a network, such as Bluetooth and wireless printers or printers that are plugged into another computer and shared on the network. You might need permission to install some printers. Notes If you use wireless access points, extenders, or multiple wireless routers with separate SSIDs, make sure you are connected to the same network as the printer for your PC to find and install it. Tip You can print a test page to make sure the printer is working correctly. Install or add a local printer If you want to connect to a local printer, simply plug the USB cable from your printer into an available USB port on your PC, and then turn on the printer. Wait for it to find available printers, choose the one you want, and then select Add device. Tip You can confirm the printer is working by printing a test page. Update drivers Most printers require driver software to work properly. Downloading and installing the latest driver for your printer can often resolve these types of problems. There are three ways to update your driver: Windows Update might have an updated version of your printer driver. To update your drivers using Windows Update follow these steps: You might be asked for an admin password or to confirm your choice. Expand Printers, find your device, right-click it, and then select Update driver. Select Search automatically for updated driver software. Install software from the printer manufacturer. If your printer came with a disc, that disc might contain software that installs a driver for the printer. Download and install the driver yourself. Driver updates are often available in the support section of such websites. Locate and download the latest driver for your printer. Follow the driver installation instructions on the website. Most drivers are self-installingâ€”after you download them, you usually double-tap or double-click the file to begin the installation. This step may be necessary to ensure that damaged or corrupted drivers are completely replaced. Follow these steps remove the old driver: In the search box on the taskbar, type Print Management, then select the search result of the same name. Note Some printer software asks you to keep your printer disconnected until its ready. See your software or driver documentation to determine when to connect your printer.

### 3: Drivers - Microsoft Download Center

*There are different ways on how to scan a document from a printer to a computer. We recommend that you visit the link posted by Andre Da Costa on this thread. The thread is posted under Windows 7, however, the link is more applicable to Windows*
