Form the above video tutorial we can see, using Filmora video cutter to cut videos without quality loss has the following advantages. Cut out parts from the video and merge to a new video "Scene Detection" function automatically split cut videos into pieces. If you want to have an online solution, Filmora video trimmer is a free online tool that can help you trim video instantly. You can upload your video from computer and video link with drag-and-drop. It is easy to use with the slider or just input specific start and end times for precise trim. It also supports various importing and exporting video format, including. More importantly, the exported video is free of watermark. It is definitely worth a try! Import your videos to Filmora Video Cutter After installing the video cutter, launch it and select the Full Feature Mode to enter the video editing interface. Now, you need to import the video that need to cut to several parts. To cut out the beginning part or the ending part of a video, you can use trim feature to cut it out quickly. Zoom in the timeline to locate the frames that you want to cut out. And drag the trim icon to the right to remove the beginner part of the video on the timeline, or drag the trim icon to the left at the ending part of the video to cut the unwanted ending parts. With the trim feature, you can cut the beginning part and closing part with one drag. If you want to cut the parts of a video, follow the steps below: Firstly, move the playhead to the beginning position of the video part that you want to cut, and click the Split icon scissor icon on the toolbar to split the video to get the starting frame, and then move the Playhead to the ending frame of the video and click the Split icon again to get the ending part of the cut video. Repeat the process to cut a video into multiple pieces. Now, you will get several cut parts, you can delete the unwanted parts, or re-order the cut videos and edit it further. To delete an unwanted cut video, you can select the cut part from the video and cut it out by clicking Delete icon on the toolbar. Currently, Filmora can not save the cut parts into different video files simultaneously, so you have to save multiple sections for different files one by one after deleting unwanted parts. Automatically cut videos with Scene Detection feature To quickly find the segment you want to cut, the "Scene Detection" function will help you a lot. Highlight the video in the media library not the timeline , right click it and select "Scene Detection" to enter the Scene Detection window. Click Detect and Filmora will separate your videos into different parts automatically based on the scene changes. You can delete the unwanted scenes by click the Delete button and then get your wanted part easily. Click the Apply button and all the separated video parts will be imported to the timeline directly, you can then edit it further. Export your video When you have finished the cutting, click Export. You can save video in other formats on the local computer by clicking "Format" and specify some necessary settings such as frame rate and resolution. If you want to play video creation on iPod, iPhone, iPad, click "Device" and select the thumbnail of your devices. You can also share your videos on YouTube directly or burn video to DVD discs for better video preservation. Apart from the methods mentioned above to cut videos, you can also use the Instant Cutter Tool in Filmora which allows you to cut large 4K videos and action camera videos without re-encoding and quality loss. To use the Instant Cutter tool, select it from the start screen. And then drag and drop your videos

You can easily remove or erase the unwanted part from the photo you have clicked right from your Mac. Sometimes you may notice that during your photo shoot you notice some irrelevant things around there and makes your photo less interested.

Permissions appear in the Document Restrictions Summary. This document provides instructions for Acrobat XI. Rotate pages You can rotate all or selected pages in a document. You can rotate pages using the rotate tools in the Page Thumbnails pane or using the Rotate option described below. Choose Rotate from the Pages panel in the Tools pane. For Direction, select the amount and direction of the rotations: Counterclockwise 90 Degrees, Clockwise 90 Degrees, or Degrees. For Pages, specify whether all pages, a selection of pages, or a range of pages are to be rotated. From the Rotate menu, specify Even Pages, Odd Pages, or both, and select the orientation of pages to be rotated. The original page orientation is restored the next time you open the PDF. Extracted pages contain not only the content but also all form fields, comments, and links associated with the original page content. You can leave the extracted pages in the original document or remove them during the extraction process—comparable to the familiar processes of cutting-and-pasting or copying-and-pasting, but on the page level. Any bookmarks or article threading associated with pages are not extracted. Specify the range of pages to extract. In the Extract Pages dialog box, do one or more of the following before you click OK: To remove the extracted pages from the original document, select Delete Pages After Extracting. To leave the original pages in the document and create a single PDF that includes all of the extracted pages, leave both check boxes deselected. The extracted pages are placed in a new document. The creator of a PDF document can set the security to prevent the extraction of pages. Split PDFs into multiple documents You can split one or more documents into multiple smaller documents. When splitting a document, you can specify the split by maximum number of pages, maximum file size, or top-level bookmarks. In the Split Document dialog box, specify the criteria for dividing the document: Number Of Pages Specify the maximum number of pages for each document in the split. File Size Specify the maximum file size for each document in the split. Top-level Bookmarks If the document includes bookmarks, creates one document for every top-level bookmark. To specify a target folder for the split files and filename preferences, click Output Options. Specify the options as needed, and then click OK. Optional To apply the same split to multiple documents, click Apply To Multiple. Select the files or folder, and then click OK. Follow steps 2 and 3 in the procedure for splitting documents with a document open. Move or copy pages You can use page thumbnails in the Navigation pane to copy or move pages within a document and to copy pages between documents. Move or copy a page within a PDF, using page thumbnails Click the Page Thumbnails button in the Navigation pane to open the Page Thumbnails panel, and select one or more page thumbnails. Do one of the following: To move a page, drag the page number box of the corresponding page thumbnail or the page thumbnail itself to the new location. A bar appears to show the new position of the page thumbnail. The pages are renumbered. To copy a page, Ctrl-drag the page thumbnail to a second location. The page is copied into the document, and the pages are renumbered. Only the text and images on the original page are replaced. Any interactive elements associated with the original page, such as links and bookmarks, are not affected. Likewise, bookmarks and links that may have been previously associated with the replacement page do not carry over. Comments, however, are carried over and are combined with any existing comments in the document. A page before and after it is replaced. Delete pages, using the Delete command Note: You cannot undo the Delete command. Enter the page range to be deleted, and click OK. You cannot delete all pages; at least one page must remain in the document. If you select Use Logical Page Numbers in the Page Display panel of the Preferences dialog box, you can enter a page number in parentheses to delete the logical equivalent of the page number. For example, if the first page in the document is numbered i, you can enter 1 in the Delete Pages dialog box, and the page is deleted. Delete pages, using page thumbnails In the Page Thumbnails panel, select the page or group of pages you want to delete. Click the Delete tool at the top of the Page Thumbnails panel. Select one or more pages in the Page Thumbnails panel, and click the Delete tool to remove them. Replace the contents of a page Open the PDF

that contains the pages you want to replace. Choose Replace pages from the Pages panel in the Tools pane. Select the document containing the replacement pages, and click Select. Under Original, enter the pages to be replaced in the original document. Under Replacement, enter the first page of the replacement page range. The last page is calculated based on the number of pages to be replaced in the original document. Replace pages using a page thumbnail

Open the PDF that contains the pages you want to replace, and then open the PDF that contains the replacement pages. In the Page Thumbnails panel of the PDF that contains the replacement pages, select a page or group of pages: Select the page number boxes of the page thumbnails that you want to use as replacement pages. Shift-click to select multiple page thumbnails. Ctrl-click to add to the selection. Drag a rectangle around a group of page thumbnails. Release the mouse button when the pointer is directly over the page number box of the first page thumbnail you want to replace so that these pages become highlighted.

Renumber pages The page numbers on the document pages do not always match the page numbers that appear below the page thumbnails and in the Page Navigation toolbar. Pages are numbered with integers, starting with page 1 for the first page of the document. Because some PDFs may contain front matter, such as a copyright page and table of contents, their body pages may not follow the numbering shown in the Page Navigation toolbar. Printed page numbering top compared to logical page numbering bottom You can number the pages in your document in a variety of ways. You can also customize the numbering system by adding a prefix. For example, the numbering for chapter 1 could be , , and so on, and for chapter 2, it could be , , and so on. Using the Number Pages command affects only the page thumbnails on the Pages panel. You can physically add new page numbers to a PDF using the headers and footers feature. Click the Page Thumbnails button to open the Page Thumbnails panel. Choose Number Pages from the Options menu. Specify a page range. Selected refers to pages selected in the Page Thumbnails panel. Select one of the following, and then click OK: Begin New Section Starts a new numbering sequence. Choose a style from the pop-up menu, and enter a starting page number for the section. Specify a Prefix, if desired.

The Acrolaw Blog is a resource for lawyers, law firms, paralegals, legal IT pros and anyone interested in the use of Acrobat in the legal community. Does Adobe Acrobat have a feature similar to the eraser in the old MS Paint program to edit pdf documents? It is very useful to remove stray marks on scanned images, staple marks, fax headers, punched hole marks, etc. If used with extreme zoom, I can remove just about any marks on the page so it looks like new. However, it would be useful to have all the features in one program. Also, the file size seems to go way up after I edit the document with Paperport. There are two ways you can clean up content in a PDF: See my Redaction Guide for instructions. Using an external image editor makes the most sense for image-based PDFs. However, Acrobat can also call a program to edit vector content, too. Image Editor Preferences When you first install Acrobat, the installer program searches for compatible editing programs on your Mac or PC. The install process will select Adobe toolsâ€™ Photoshop for image editing or Illustrator for vector editingâ€™ as the defaults, but you may also use tools like MS Paint. If you install an image editor after installing Acrobat, you will need to tell Acrobat where to find it. To view or change your image editor preferences: The image of the page will open in your editor of choice Photoshop below. Use the appropriate tool s such as the eraser tool to clean up the image. Switch back to Acrobat and the page will update: Once you save the file, the change is permanent. Work on a copy of the file if you are unsure about what you need to do. I do so quickly over large areas of the screen, but your reader could easily zoom in and create small rectangles over even the tiniest marks. Be sure to flatten the rectangles before trying to OCR or do other extreme manipulations of the pages, or the rectangles will realign themselves in the wrong places.

Boot Camp allows you to dual-boot between a Windows partition and OS X on a Mac. Dual booting multiple OS's is incredibly useful and has plenty of purposes, but if you decide you no longer need to run Windows on a Mac you'll probably want to remove the Windows Boot Camp partition so that you can.

Add clips to the Timeline Before editing, the clips should be added to the Timeline. There are two ways to do that: Choose a clip in the Media Library and drag it to the timeline directly. Click the plus button in the lower right corner of each media file, add to project directly. If you want to insert a media file in current files on timeline, you cannot drag and drop directly, which may overlay your current media files. Try to drag it to the end of timeline, and then arrange the order by dragging on timeline. For easier accessing to the different media clips on the Timeline, drag the slide bar to adjust the view size of the Timeline. You can also click the Zoom to Fit Timeline button to zoom the view size automatically. Trim a Clip After drag the video to timeline, you can move the pointer to the edge of video file. After the pointer becomes an icon like this: You can trim from the start or end red line. Most of time, you may need split tool to adjust this editing. Trim function can help you remove the unwanted parts of videos quickly. As we mentioned above, the green part will be removed automatically. Split a Clip The split function helps you cut a video to two separate parts. To split a clip directly on the Timeline 1. Select a clip in the Timeline Viewer. Drag the Split Maker on either side of the clip to change the length. Click the Split button or right click and choose the "Split" option from the context menu. If you want to delete the unwanted segment, click "Delete" button directly. To automatically split a clip using scene detection 1. Right click on the target video file in the Media Library and select "Scene Detection" option. This will open the Scene Detection dialog box. Click "Detect" and after several seconds, the file will automatically be broken down into several clip files according to the content change. Then click "Apply" and the separated clips will appear on the Timeline. You can check more details here. Crop a clip The crop function preserves the selected part of a clip and deletes the unnecessary elements. To crop a clip: Select a clip in the Timeline Viewer or Storyboard Viewer. Right click on the clip and choose the "Crop and Zoom" option or choose the clip and click the Crop option. In the pop up window, stretch and move the rectangle to adjust desired frame area. You can also choose from " The Rotate or Flip feature will help you fix it. To rotate or flip a clip: Choose clip in the Timeline or storyboard viewer. Then click the different rotate or flip button to make it happen. Join videos If you have shot or downloaded several videos in a sequence, the join function can have you put them together in no time. To join videos together, just place all the videos on the Timeline in the order and click "Export". Ripple Edit A ripple edit lets a single edit ripple down through the rest of the movie to ensure everything stays in sync and just the way you designed it. All you need to do is to turn on Auto Ripple by press the chain icon at the bottom of the timeline. With the auto ripple on, if you add or delete an element in the middle of the project, the video with all the added effects will be shifted or deleted along as a group. You can click the chain button again to unlock the combination. Render a Clip After dropping your video clips into the timeline you will see a red, yellow, or green line on top of them. The red line means you need to render the clips for a smoother preview. The yellow line means there is a risk of the preview being out of sync, so you may want to render your clips. To render a clip, select it in the timeline and then click the Render button. After a clip is rendered, the line above it will turn green. You can then paste that image in another picture. You can also copy a portion of an image, adjust the color in the rest of the image, and then paste the original segment back to make a part of your image stand out. Let me show you how you can cut out objects from images in Preview. So I have an image here of myself. I can do this in several different ways. With the instant alpha tool you can grab a color and you can select it. See the red area is the selected area. So you can see it is selecting my shirt there and it is not quite getting all of it. I can select another area of the shirt, like that, and you can see I am not really that successful in grabbing everything. Either I have too much or too little. So it is not probably one I want to use but if you have something where the color really stands out then that might be the ideal tool for you. You can do up here a Rectangular or Elliptical selection. I can also do a Lasso selection which allows me to basically draw an area. This is really difficult to use. It is just you have to draw perfectly and it is hard for an image like this. So probably what I want to use is the Smart Lasso tool. With the Smart Lasso tool I have to just generally get the edge here. If I generally get the edge Preview will figure the rest out. So I going to grab this much. Now I can cut myself out of this. Now it has cut me out and it is transparent in the space where I was. Now the whole point, usually then, is to paste yourself somewhere else. So, for instance, I can paste myself at a baseball game. Now there is even more that you can do with this. So probably you would want to do it a little bit less but you can see the effect nonetheless.
