Advanced Video Snapshot lets you create 2-, 4- or 8-second movie clips, with music, that are perfect for sharing. And the advanced easy-to-operate control features of the VIXIA HF R11 help to make high-quality video that can turn the casual shooter into the family cinematographer, at a very affordable price. With Relay Recording, the camcorder automatically switches video recording from the internal drive to the SD memory card when the memory becomes full. No need then to worry about running out of recording time during a thrilling, once-in-a-lifetime shot. The advantages of flash memory go beyond the added recording time. It also minimizes the chance of data loss if there is damage to your recording media or to the moving parts found in other camcorders. The Canon Exclusive 2. Instant AF A critical objective when shooting in high definition is achieving the sharpest focus possible. This system achieves focus instantaneously, reducing focus "hunting. This helps in capturing your subject in razor-sharp focus. It works by providing a 2x magnification of your subject, which is automatically cancelled when you start recording. This is a feature normally found in professional broadcast-quality cameras. The Dynamic IS system provides continuous adjustment throughout the entire zoom range to correct a broader range of motion. In comparison to conventional electronic image stabilization systems, extra compensation is applied at wide-angle focal lengths to eliminate unwanted vibration common when shooting while walking. Smart Auto Smart Auto makes shooting great video easier than ever before. Whether you are capturing a sunset, a day at the beach, or a fast-paced soccer game, Smart Auto delivers exceptionally accurate results. Genuine Canon Face Detection The same high quality Face Detection technology used in Canon digital cameras is available in Canon high definition camcorders. Up to 35 faces can be tracked automatically, ensuring razor-sharp focus and natural, accurate exposure. Of the faces tracked, 9 detection frames can be displayed at one time. In fact, the system is so intelligent that it will recognize faces turned downwards or sideways. In addition, a specific face may be selected as the main subject for continuous tracking. In search and playback, use of the Face Index will display those frames with the chosen face as a thumbnail in each shot in which it appears. Your selected face can also be linked as a timeline to further identify footage containing your subject. Advanced Video Snapshot Advanced Video Snapshot allows you to capture the highlights of a once in a lifetime trip or a family milestone with the same ease as taking photos. This version of Advanced Video Snapshot allows selectable recording time of 2, 4, or 8 seconds. Additionally, audio from an external source, such as an MP3 player, can be played along with the snapshot movie and playback can be controlled from that source. Easy Web Sharing HD-to-SD Downconversion allows you to convert recorded high definition video to standard definition files while safely preserving the original HD video. These standard definition files make it even more convenient to edit, share video online, or create a DVD. The downconverted video can be transferred to your computer via traditional methods – i. Canon camcorders are not guaranteed to support Eye-Fi card functions including wireless transfer. Outside of the United States and Canada, government approval is required to use Eye-Fi cards in many countries or regions. Without approval, use of the card is not permitted. If it is unclear whether the card has been approved for use in the area, please check with Eye-Fi, Inc. Once again, Canon delivers features and technology that advance convenience and capability. You can also choose from a range of exposure modes: You can even choose from two different colors for the grid ensuring that you see the grid, no matter what the background color of your shot is. While playing the movie in your camcorder, simply press the photo button to capture a x still image onto an SD card or to internal memory. Now, better photos, filled with action and expressions, are easy to grab, print, post and share. A one-cable connection is all it takes to send the files across and, with the click of a few buttons, your photos are ready to share with all. For added flexibility, these settings can be used together or independently. You would normally have to look to professional video cameras in order to find a sophisticated tool like 30p Progressive Mode at your command. In addition to the

standard interlaced video frame rate of 60i, you may choose to set the VIXIA HF R11 to capture video in 30p, 30 progressive frames, recorded to 60i which is particularly useful for footage to be used on the Internet. In addition, this setting gives enhanced quality to photos captured after recording. A Microphone terminal with manual audio level control and Headphone terminal provide exceptional audio flexibility. Turn your camcorder on and the lens cover automatically opens. Turn it off, and the cover closes. No worries about using up power with Quick Start - by keeping the LCD screen closed between shots, Quick Start allows you to save battery power so you get longer battery life. With this feature the camcorder continuously records three seconds of video to memory before you even press the record button. When you start recording, the additional video is recorded too. It will be easier than ever to capture the moment when the bat hits the ball at the start of that home run. You can easily perform a variety of functions, including AVCHD Editing in which you can trim, reorder, and combine scenes, as well as add music, titles, and transitions. This software also allows you to play your AVCHD movies on your computer and will also let you share copies of your movie with friends and family through flash memory to hard drive copying. This software will also assist you in converting video to the optimum resolution for transmission over the Internet. A one-cable connection is all it takes to send the files across and with the click of a few buttons, your videos will be burned to an AVCHD disc for play in a compatible DVD player.

3: VIXIA HF R11 - Canon Camera Museum

About this Manual Thank you for purchasing the Canon VIXIA HF R11 / VIXIA HF RIO/ VIXIA HF RIO0. Please read this manual carefully before you use the camcorder and retain it for future reference. Should your camcorder fail to operate correctly, refer to Troubleshooting (E:_).

So why did I buy it? They were no longer stocking them and it was the last one. It was a new, sealed unit. When I unpacked it I was very impressed with the camcorder itself. It was very attractive and had a very nice high-quality feel to it. It sure felt like it. Unfortunately that is where the quality ended. I went to install the battery I was surprised to see that it actually went inside the camera. So much for an extended battery. To charge it you remove one of the plastic doors on the back of the camera and plug in the power cord. There are two of these doors on the back and they stay attached by rubber tethers and seem fairly secure. I was pretty disappointed since this is pretty common in less expensive camcorders. I went online to see if there were any firmware updates and there was. It allows the camera to recognize SDXC cards now. I checked the firmware on my camera and it was already updated. After the camera was fully charged I started shooting video. I started in the house with camera on IA Intelligent Auto. Everything looked sort of dark and grainy, but I figured it might just be the display. I played around with some different settings, which were really easy to find. The menu system in this camera is really easy to navigate and the little flat joystick-like knob made it very easy to move between menus. After shooting some indoor shots I went outdoors for some shots of the yard and pool. This is where I could test out the zoom and the image stabilizer IS. This is when I started getting really disappointed. So I turned on Dynamic with high expectations. I was sorely let down; Dynamic IS seemed to make no difference. So I played around with some other settings including turning digital zoom and off, but nothing helped. Well after shooting all my test footage it was time to watch it on the TV. I plugged everything in and it came up on the TV nicely. It was extremely annoying that I had to squat next to the TV with the camera since it had no remote. Well the indoor footage looked terrible; even worse than what I saw on the camera display. It was extremely grainy and the colors were terrible. So I figured I would shoot some more footage trying some manual settings and priority AS. Another problem was there was like a motor sound I could hear in the recordings, almost like it had a tape in it. So then I viewed the outdoor footage. It was better, but the colors seemed a little washed out. In Auto mode it would change the setting based on the scene. As an example; I got really close to a bush and it would automatically select Macro. Another problem with this camera is the audio. It sounded pretty bad. The audio sounded to me like it was highly compressed. I recorded the water spilling over the spa wall and it did not accurately reproduce the sound. Now the nice thing is that it has a mic-in jack, but again, there is no accessory shoe to mount a microphone on. This is another area where my old JVC was far superior. All in all this is just not a well done product by Canon. It is way overpriced for the features, and especially considering the audio and video quality. Canon needs to just pull this product before it hurts their reputation. I know someone that has one and has been very pleased with using it with his Mac. The most important part is the hardware.
