Whether you are a seasoned dungeon master, or just started with roleplaying, Dungeon Discoveries card decks help you conjure up inspirational world-building details with the flip of a card. Each themed, card set generates thousands of system neutral results, ranging from cryptic, mundane, to funny. Draw a card and match up any entry from the top and bottom half. Draw multiple cards to create awesome combinations. Works with any RPG System no rules text, no dice rolling Insane replay value with near infinite combinations. Thousands of possible results per card deck. Are your players veering off the beaten path? Looking for a mysterious new quest hook? Dungeon Discoveries decks provide an endless stream of ideas: When you are planning your next game, or on the spot during game night. Never again will you have to say You are free to combine entries from the top and bottom half, giving you many fun options per card. Each fifty card set contains "seeds". Granted, not every single combination will make sense, some will even be un intentionally funny - which could be a good thing: What do I find? We traveled through barren wilderness, slain the Troll King of Gurglewarts to break into the ancient Tomb of Hellcragg and I find nothing? What do you mean nothing? There are plenty of random encounter and treasure decks on the market, sure. But they are usually rules-heavy and offer very low replayability if any. Dungeon Discoveries decks can be used during gameplay, during preparation, using it to come up with fresh ideas for your story and encounters, or even in ways we have not touched yet. Generate interesting before the game: Create hidden clues, mysterious objects, surprising story hooks, red herrings and more. Generate ideas during the game: When your players roll investigation checks, talk to NPCs, a cryptic cliffhanger at the end of a session Reward Tiers.

Experienced card designers offer their how-to tips on card engineering. Handy guide easily explains techniques through well diagrammed illustrations for all levels.

Consequently, if you want to feel safe and warm, and make phone calls to tech support 3 times a day, then by all means, go get yourself a certified workstation instead. Last I checked, however, most of you are engineers. The good news is this means your wallet will thank you; getting a respectable CPU has never been more affordable. Microprocessor performance, however, is now a non-obvious fusion of clock speed, process size, and architecture. Take, for example, the Intel i which outperforms the i on most benchmarks, despite a Mhz dearth in clock speed, and the same 22nm process, the difference being the Haswell-E architecture. The current sweet spot for value is around the ik , with strong single-core performance which matters most in a CAD universe that is still overwhelmingly single-threaded. Professional cards are specially binned for enhanced reliability and benefit from dedicated driver support and optimizations for your CAD applications. The gaming cards are exempted from these optimizations, not because the hardware is necessarily incapable, but due to how the driver support has been coded. Ah, first world problems. Get two graphics cards. Multiple graphics cards with different drivers coexist just fine in Windows 7 and up. Get a lower end pro card something like the Nvidia Quadro K to ensure stability and use the optimized driver, and supplement with a gaming card to ensure happiness. Yes, you can have your cake and render it too. Throw money and cares to the wind, pickup a TitanX with its floating point potential and general disrespect for normalcy, and blame any graphical glitches on solar flares. Early concerns over longevity and reliability of SSD technology are ancient history. If you need more space consider buying two identical drives: It also makes good sense to supplement your SSD with a sizable magnetic drive, to store larger, less performance-sensitive data, like your totally legitimate G music collection. Do you need it? You have the power You need some electric juice for all this PC glory. Typically, a power supply in the W range is what you need. A Place for Your Gear Part of the fun of building your own rig is injecting a bit of your own personality. The best place to do so is via the case, a welcome improvement over the lifeless, boring black boxes indicative of a purchased workstation. Personally, I tend to err on the land-a-plane-on-it case size. A Reasonable Self-Build July 29,

Instead, each device is best for a particular type of user. Values highly the weight and size of every item in their pack Desires more functionality than a PLB, notably non-emergency check-ins and route tracking Undertakes trips that are low- or moderate-risk and that have simple logistics Will be content with 1-way communication I want to dig deeper on this last point. One-way communication may be fine if, for example, you: Front country activities, e. They are comparable in weight and size, and less expensive in the long run because there are no annual or monthly service fees. I have read that the MHz signal is more reliable than that used by satellite messengers. Read more about the DeLorme inReach. Reliability The core question with satellite communicators is: If I have an emergency, will my message be received? I have read that the Globalstar satellite network is less reliable than others e. Maybe an engineer who better understands wattage and satellite networks can provide us an update in the Comments section. For this reason, I have no hesitation about carrying it on a long trail run, a simple day hike or ski, or an ambitious backpacking trip when every ounce matters. KISS The Gen3 does exactly what it needs to do, without any additional functionality that increases build, cost, power demands, and risk of failure. It can send four messages, each with a dedicated button: It does not offer 2-way communication. Messages cannot be customized in the field. And there is no screen, option for smartphone pairing, or GPS functionality. The Gen3 can send just four messages: Okay, Help, SOS, and a customizable message screenshot. These messages are received via email or text by individuals that I specify in my online profile. This is a non-critical but value-added feature of the Gen3, as it allows family and friends to engage my trips on a deeper level. I recall a trip I did in southern Utah, for example, where my mom would pull up the location of my messages on Google Maps, and then look at photographs that were geo-tagged nearby so that she could better understand the landscape. Messages sent by the SPOT Gen3 are geo-tagged, so that family and friends can engage real-time with my whereabouts. When I sent this message, I was in my front yard. When I return from a trip, I can also use the message locations to recreate my route and camps. Two-way communication can also be extremely convenient. Receive updated weather forecasts, reschedule a shuttle or bush plane pick-up, resolve urgent problems at work, etc. The user interface is clunky but functional. Here, I can specify message recipients, change the tracking interval setting, and connect my messages to my social networks like Facebook. This is also where I activate and a device and pay for my service plan. They had no influence over this review. If you own another device, what factors drove that decision?

4: How to Build Your Own "Kick-ASS" CAD Workstation on a Budget

Engineering Enter your mobile number or email address below and we'll send you a link to download the free Kindle App. Then you can start reading Kindle books on your smartphone, tablet, or computer - no Kindle device required.

Each of the 55 cards in the deck features eight symbols, and there is always exactly one matching symbol between any two cards in the deck. Your goal is to be the quickest to find the match between two cards. There are a total of 57 different symbols throughout the deck. While playing the game with several family members, my son questioned how it was possible that any two cards always have exactly one match. After spending some time analyzing the game, I came to the conclusion that the makers of Spot It! They could have made 57 cards out of the 57 symbols with 8 symbols on each card. I will try to explain the mathematics involved. If there were 2 symbols on a card, then the deck would contain 3 cards and a total of 3 different symbols. Let the symbols be A, B, and C. Then there would be 3 cards: Note that between any two of the cards, there is one and only one matching symbol. If there were 3 symbols on a card, then the deck would contain 7 cards and a total of 7 different symbols. Then there would be 7 cards: Also, note that each symbol occurs on 3 cards. If there were 4 symbols on a card, then the deck would contain 13 cards and a total of 13 different symbols. Then there would be 13 cards: Also, note that each symbol occurs on 4 cards. I was able to create the 13 cards very easily by using a table similar to the one I use in solving logic puzzles. I used the method of elimination to solve for the 13 unique cards where there was exactly 1 match between any two of them. Here is the table:

5: - Card Engineering (On the Spot Guides) by Lan Honeybone

On the Spot It Cards, the same image will occasionally be very small or very large, and more often will be a range of sizes in the middle. My impression is that this is part of what makes it hard to find the match.

6: Card Fitter Jobs in Spot Acre, Stone (ST15) | Card Fitter Job Vacancies Spot Acre - Careerstructure

Employee SPOT Recognition Awards This easy solution helps organizations implement a SPOT recognition program that gives employees a choice of their gift. Recipients of employee spot recognition award cards can immediately redeem their award online.

7: BBC - GCSE Bitesize: Paper engineering

Spot It! is a fast-paced matching card game. Each of the 55 cards in the deck features eight symbols, and there is always exactly one matching symbol between any two cards in the deck.

8: Transit Link Product & Services

Most 'how to guides' on finding the G-spot will tell you to lie flat on your back with your legs slightly apart, insert your index finger and you should find it about 2 inches in towards your bladder.
