After purchasing your parts manual you can instantly download it and view it. The manual is fully printable; you can print pages from it whenever you need too. It was equipped with a Continental O hp kW six-cylinder, air-cooled engine and had a maximum gross weight of 2, lb kg. For the first time, the "Skyhawk" name was applied to an available deluxe option package. This added optional equipment included full exterior paint to replace the standard partial paint stripes and standard avionics. The gross weight was increased to 2, lb 1, kg. It brought to the line an optional autopilot and a key starter to replace the previous pull-starter. The seats were redesigned to be six-way adjustable. A child seat was made optional to allow two children to be carried in the baggage area. A total of C models were produced. New rudder and brake pedals were also added. In reality this was not a new model but was a Cessna Skylark that had been renamed for its last year of production. The Skylark had gained a reputation for poor engine reliability and the renaming of it as a was a marketing attempt to regain sales through rebranding. The move was not a success and neither the Powermatic nor the Skylark were produced again after the model year. The electrical fuses were replaced with circuit breakers. Gross weight was increased to 2, lb 1, kg where it would stay until the P. The E also featured a re-designed instrument panel. A total of Fs were completed. It also introduced a shorter-stroke nose gear oleo to reduce drag and improve the appearance of the aircraft in flight. A new cowling was used, introducing shock-mounts that transmitted lower noise-levels to the cockpit and reduced cowl cracking. The electric stall warning horn was replaced by a pneumatic one. The familiar needed to be re-engined because Cessna had cancelled its contract with Continental for their venerable 6-cyl engine of hp kW. There was no change in the sea level rate of climb at ft m per minute. The I also introduced the first standard "T" instrument arrangement. The I saw an increase in production to record levels with built. However, as time for model introduction neared, those dealers who were aware of the change began applying pressure on the factory to continue the previous configuration. They felt the new model would be less usable as a trainer. Consequently, and at the last minute, the decision was made to continue the in its original configuration. The planned J configuration would be introduced as a new model, the The deluxe option would become the Cardinal. The "J" designation was never publicly used. The K had a redesigned vertical fin cap and reshaped rear windows. Optional long range 52 US gal l wing fuel tanks were offered. The rear windows were slightly enlarged by 16 square inches cm<sup>2</sup>. Fully articulated seats were offered as well. Production in was units. The new gear had a width that was increased by 12 in 30 cm. This was marketed as the "camber-lift" wing. The baggage compartment was increased in size and nose-mounted dual landing lights were available as an option. In , Cessna stopped marketing the aircraft as the and began exclusively using the "Skyhawk" designation. This model year also saw a redesigned instrument panel to hold more avionics. Among other changes, the fuel and other small gauges are relocated to the left side for improved pilot readability compared with the earlier panel designs. Total production of "M" models was over the four years it was manufactured. Unfortunately, this engine proved troublesome and it was replaced by the similarly rated OD2J to create the P. The "N" model also introduced rudder trim as an option and standard "pre-selectable" flaps. The model brought a volt electrical system to replace the previous volt system. Air conditioning was an option. Larger wing tanks increased the optional fuel to 66 US gallons l. The "N" remained in production until when the P or Skyhawk P was introduced. The Lycoming OD2J was a great improvement. The "P" model also saw the maximum flap deflection decreased from 40 degrees to 30 to allow a gross weight increase from 2, lb 1, kg to 2, lb 1, kg. A wet wing was optional, with a capacity of 62 US gallons of fuel. It had a useful load that was about lb 45 kg more that the Skyhawk P and a rate of climb that was actually 20 feet 6 m per minute lower, due to the higher gross weight. Production ended after only three years when all production stopped. Here you will find the first Cessna to have a factory fitted fuel-injected engine. This model year introduced many improvements, including a new interior with soundproofing, an all new multi-level ventilation system, a standard four point intercom, contoured, energy absorbing, 26g front seats with vertical and reclining adjustments and inertia reel harnesses. The maximum engine rpm was

## CESSNA 172S 2003 MAINTENANCE MANUAL pdf

increased from 2, rpm to 2, rpm resulting in a 20 hp 15 kW increase over the "R" model. As a result, the maximum takeoff weight was increased to 2, lb 1, kg. The S is built primarily for the private owner-operator and is offered with the Garmin G avionics package as standard equipment and leather seats. The Cutlass featured a variable pitch, constant speed propeller and more powerful Lycoming OF1A6 engine of horsepower kW. Between and RGs were built, with a small number following before production ceased in
