Oct 9, -edited Chess is a game that is played across cultures. By playing chess, you can build a relationship with another person even when the two of you are very different and do not speak the same language. Sometimes you will not see what is coming your way and unexpected things happen. This can happen in life, too. While you may fall down in life and face difficulties, remain strong by picking yourself back up and bouncing back stronger, wiser, and more powerful than before. Keep trying and eventually you will learn and grow! Resilience also known as stick-to-itiveness , is a key component for emotional health and well-being. Chess is a game that is played across cultures. As you play by the rules of the game, you can develop trust and share in a relationship with another person. Both sharing and trusting help form the foundations for good friendships in addition to acceptance, empathy, and generosity of the soul. You will make mistakes in chess and in life, too. Although you cannot undo your moves in chess or in life, you can always choose to make a better move next time. An emotionally mature person knows to own up to his or her mistakes and accept accountability for them. When you do lose, do not lose the lesson. Learn and grow from it because you can always make a better move next time. In life, happy people approach their own problems as solvable, recognizing that there are usually good solutions! You can be competitive, but when the game is over, it is over. In chess, and in life, you may win sometimes and lose other times. Just as in life, in order to be successful, you should accept wins and losses with goodwill toward others, stay focused on your own path, and practice forgiveness. Foresight wisdom is similar to using your intuition, which is based on your inner feelings. Using good thinking, following your intuition, and dedicating yourself to hard work can contribute to both your own success and success in society! In life, your good works, community passion, and dedication will bring you joy. Surround yourself with good people who inspire you to be a better person. In chess, it is important to follow the rules so that there is a fair chance of winning. Remember that every chess piece can only move in a specific way according to the rules. When we practice coexistence, it is our job to empathize with, care for, and respect people for their own differences, strengths, and vulnerabilities. The Queen is the most powerful piece on the chessboard. In life, Queens and other powerful people ideally will use their authority with mindfulness and fairness. Remember, the definition of bullying - bullies have a power advantage over their targets, so, when you have power, use it graciously and wisely. In chess, you must be able to recognize when you need to get your pieces out of a bad situation. Fortunately, in chess the King is never allowed to put himself into checkmate capture. This is important in life, too. Follow your intuition and excuse yourself from people who do not make you feel good about yourself. Like the King, we should not put ourselves in bad situations. Sometimes, the best way to stand up for yourself is to remove yourself from the harmful situation. Be an Upstander for yourself and others. In life, when you decide to stand up for yourself or a friend, you also need to plan accordingly. Friends, parents, educators, and people in authority for example, the police , can be part of your support system, because sometimes problems are too big for you to solve on your own. Engage with grace and dignity with others.

2: Buy Chess Course

"Better Chess in Ten Easy Lessons" is designed with beginners in mind, adults and older children will be comfortable with the format and writing style (written by the author of the Chess Rules! website).

Step Up in Tactics Avg Rating: Advanced Tactics Avg Rating: Advanced Tactics" contains tactical problems that will challenge a player rated Elo or USCF or higher if attempted without using any of the hints. Silman Teaches Tactics 1 Avg Rating: Some challenges here are difficult even for masters and above. However, players of all levels can enjoy and learn from these examples. Less experienced players will go over these challenges many times and continue to learn more each time as they progress in their chess knowledge and experience. They are from actual chess games that have ended in 20 moves or less. In almost every game, errors are swiftly punished, and thus this course may be studied as a source of opening traps and lines to be avoided or take advantage of. This course provides an excellent opportunity to study tactical positions, attacks, combinations, and sacrifices. Finding Tricky Tactics Avg Rating: The positions are drawn from my book "Awesome Chess Moves" Cardoza. The book contains much more analysis than can be presented here, but the main goal is to get you to consider moves that may seem outrageous and see how they work. It can be executed with any piece other than the King and it is a very powerful strategy which can quickly turn the tables and lead to a decisive position. This is another basic tactical tool that is easy to understand and critical to master. You will also protect yourself from potential disaster! The difference between a fork and a double attack is that a fork is one piece attacking two things at the same time, while a double attack is two pieces making two attacks at the same time. The trick to seeing this possibility in any chess position is to look for any situation where one piece is "covered" by another piece, where if the piece were to become "uncovered", it would create a threat. A "Discovered Check" happens when one piece moves away and "uncovers" check against the king by the piece behind it. Discovered check sometimes is used in an attack against the king, sometimes is used to win material, and sometimes is used to do both. Double check is usually focused on attacking But sometimes you can. And the best way to get better at finding those opportunities is In this course you will learn how to use this tactical idea successfully so that you will be able to use this idea in your own games. Most commonly these fall in between trades where a recapture seems to be the only proper means of play. Such in-between moves often have a surprising and pleasing effect of increasing the potency of a combination beyond It is a chess tactic which seldom arises, and is therefore often overlooked. Opportunities for interference are rare because the defended object must be more valuable than the sacrificed piece, and the interposition must itself represent a threat. But when this opportunity does arise it can reap huge rewards! Here you will see many examples of misplaced pieces and how to take immediate advantage. You will learn to examine capture-checks in every complicated situation. No matter how foolish the move may seem at first glance, it may be the key to complicated tactics. You will find yourself able to solve checkmates even buried ten moves deep! I give all possible checks and captures at the start of each position. I urge you to consider all of them, no matter how foolish they look at first glance. Combinations of Mikhail Tal Avg Rating: His games inspired not only the spectators, but his opponents as well. Sharp sacrifices were his trademark, often played by instinct rather than by calculating concrete variations. The Technique of Calculation Avg Rating: Are you up to the challenge? Combinations of Alexander Alekhine Avg Rating: He is remembered for his fierce and imaginative attacking style. His life was also filled with controversy. Alekhine stayed in Europe during World War 2, where he played in Nazis organized chess tournaments. He shined like a meteor all his life and was known for his brilliant attacking chess. His play could be described by all the colours of the rainbow. All of them, but the grey one! Enjoy his sparkling combinations! June is the month of the Tal Memorial in Moskva, so what better time to honor this champion?

3: Play & Learn Chess for Free - 3 Online Courses, Lessons

chess lessons learn openings, endgames, strategy and tactics from top chess teachers. Chess in ten easy lessons (chess lovers' library) by evans, details about chess in ten easy lessons (chess lovers' library) by evans, larry be the first to write a review chess in ten easy lessons (chess lovers' library) by evans, larry.

We teach the game of chess through storytelling. We come to the home 45min-1hour long lessons so you can choose the best day and time that suits you. Our tutors are fun and creative and will get your child loving chess! What can be expected in a lesson? It allows for the world we created to unfold. The first 10 lessons are the piece mechanics: At this point they will have played many small games using a select few pieces they are fantastic for learning the full game but in doses. By the tenth week approximately your child will know all the pieces to play full games. But a teacher may repeat some lessons as well – repetition, taking their time and being thorough is always a good thing. The next section will be basic strategy: After strategy we focus on sportsmanship. We take the children on an adventure story of how to be friends when they play, and how to win and lose. We have many lessons post the core curriculum that dig deeper and provide great amounts of fun while they are learning a complex game that teaches them incredible skills. How many children in a lesson? We offer lessons for any amount of children. There are great benefits for a 1on1 home lesson or a group lesson. We can provide 1-on-1 lessons. The sky is the limit. Do you provide the chess board? Yes, our tutors will come each week with their own chess set and board to use for the lesson. Our sets are vinyl and easily cleaned and our pieces are very distinguishable. What is the benefit of a 1-on-1 private lesson? There are many advantages to having one of our amazing tutors come to your home to work privately with your child. A couple of the benefits are: Group lessons are fun for children to have a peer in the room with them. A couple of the benefits for the children are: Children getting to learn to win and lose with each other They get to learn teamwork and communication Do you offer group lessons? We let parents design their own so that they and their friends can choose the best day and time that they all want. How long are lessons? Lessons are 45 minutes to 1 hour in length. We base the length of the lesson on the child. Our tutors work hard on expanding the child's attention span, but we also want to be aware of when a child is tired and rather than allowing them to get cranky or disinterested we shift gears into another activity within our chess world such as chessercises or we may end a little before the hour is up. Chessercises are physical exercises for the students. Chessercises help with memory and groundedness in the game. Do you teach in schools? We love teaching in schools. We have tutors available for in-school lessons or after-school lessons. We offer a variety of ways to partner with us. Please see our school page. How long until my child learns chess? Each child learns at a different pace, but generally our tutors will have your child knowing all the pieces and ready to play full games in ten weeks. Our goal is to be thorough and as fun as possible. We repeat lessons if necessary and can move through some aspects faster if needed. How does payment work? When you register with us you will submit a credit card to be on a secure file. We will run the card each week after each lesson that is conducted and a receipt will be sent to you. We do not do cash or checks or packaged deals. Do you offer package pricing? We do all payment on a per lesson basis. When a lesson is complete we collect payment at that time and send you a receipt. Why do you teach through stories? Stories are very powerful and are perfect for children. Children have an astounding ability to retain stories down to the last detail. In some cases, children can recall a story word for word. Telling a child a rule in three sentences may only confuse them because they have nothing to connect with. Instead of telling them what to do or what something is, reveal it through a story. This allows the listener to figure things out alongside the characters. They can answer their own questions or be open to the answer that is given because the story explains how this answer came about. Young children need reasons for things. They are trying to get to the root of the rule, its justification. All children are brimming with curiosity. They want to know everything. Stories also accommodate different levels of chess experience in the classroom. If an absolute beginner and someone who has some chess experience are in the same class, they will still be able to connect to the story and learn something, regardless of skill level. These stories engage everyone. Do you come to the home? We offer in home personal attention. We are trying to make this the most convenient for

you. Our specialty is coming to your home at the day and time that suits you best. We have many wonderful certified tutors in the city which allows us to cater to your needs. Granted some time slots are hard to fill, so please be patient with us. What times are lessons offered? We offer lessons in the morning, afternoon and evenings. Our tutors teach all day long. We even teach on the weekends. Do you teach on the weekends? Yes, we offer lessons any day of the week and any time of the day. Do you teach on holidays? If you want a lesson on a holiday and we have a tutor available we are more than happy for lessons to happen. Our tutors make their own schedules so if you have been placed with a tutor already and want a lesson on a holiday then reach out to them and request a lesson. If your tutor cannot accommodate your request please contact the office and we can arrange another tutor to come at that time. Are your lessons weekly? Yes, for the most part yes. We have found that conducting lessons on a weekly basis is the best for the child. A week is a wonderful allotment of time between lessons, it allows the child to miss the lesson and be eager for the next while at the same time it recurs often enough that they retain the information from week to week. Substitutions do take place. We value our tutors making meaningful connections with you and your child and wish for them to never take a week off but sometimes our tutors need to travel or maybe go on an audition. If this happens they will provide a substitute tutor upon your approval. Our tutors all teach from the same curriculum so it is usually a seamless transition. What if I want to change the schedule of our lessons? Not a problem at all. Reach out to your tutor since they are in charge of their specific teaching schedule. They will most likely be able to accommodate the change. If they are not, please contact us at the office and we can provide a substitute for the temporary or permanent schedule change. What if I want to leave for vacation or take a long break? Please send us a postcard! And inform your tutor in advance and they will work the scheduling out with you. What if I want to have a different tutor? We definitely understand that not everyone tutor connects with every child.

4: 10 Life Lessons And Anti-Bullying Messages Made Meaningful Through Chess - www.enganchecubano.com

Details about Chess in Ten Easy Lessons (Chess Lovers' Library) by Evans, Larry Be the first to write a review. Chess in Ten Easy Lessons (Chess Lovers' Library) by Evans, Larry.

Fabiano Caruana is a hero Fabiano not only played great chess, but also delighted the crowd with entertaining post game interviews. Most important was his constant use of the confessional booth. The fans absolutely loved it anytime a player used the booth, so for Fabiano to recognize this and actually use the booth with such frequency, was a clear statement that he cares about making chess fans happy. Caruana in the confessional: Fabiano went above and beyond to provide an extra enjoyable experience for the fans, and deserves huge applause for his efforts. Also he played pretty well too! Nazi Paikidze is a beast In her last round game, I felt like I was watching Topalov during his prime. Topalov would just play these sharp and overly dynamic moves against everyone and just mow them down one after another. Photo IM Eric Rosen 3. Our young girls are here to stay In the past years, we had a few young girls playing in the U. However this year things changed. We had 5 young girls competing and all of them made some serious noise. Then in Round 11 it happened again, as Ashritha Eswaran took out the leader in a superb positional effort. Next year these girls, along with other possible participants such as K-9 Champion Maggie Feng, are going to continue to cause problems and in not too long, one of them will win the whole thing. His only loss was to Hikaru Nakamura. He has great emotional control and is already comfortably above Jeffery is getting close to a draw. The Commentary Team Rules The commentary team and production value of the daily show is outstanding. Jennifer, Yasser and Maurice have great chemistry with each other. They all fulfill their own roles and seamlessly move from topic to topic to keep the show interesting and fresh. Using little things like phone calls, tactic puzzles during the break and quick segments by Alejandro Ramirez are a great idea. Chess games are unbelievably long, and for that reason I almost never find myself watching any broadcasts. Championship, it was tough to stop watching. Photo Austin Fuller Also the post game interviews are just awesome. My only complaint is what I find to be an excessive use of computer analysis. There is some place for it of course, but it should never be used when one of the top players is being interviewed unless they specifically ask for it or when Gary Kasparov is sharing his actual thoughts on a position. Photo Lennart Ootes 6. The Confessional Booth is Amazing The confessional booth is amazing but at the same time shows the relative selfishness of chess players. There are thousands of people watching, and nothing excited them more than someone stepping into that confessional booth. Everyone watching was just desperate for it. I have played enough chess to know there is plenty of downtime in a game. All hail king Fabiano. Wesley So is an angel Wesley So is an angel sent from heaven. I hope he becomes World Champion after Caruana. Photo Spectrum Studios 8. This is our chance to see the unbeatable Garry Kasparov go up against the best players of this generation. However Akshat displayed his biggest weakness: It even cost him a potential win against GM Wesley So early in the tournament. Akshat has the move 1. Qd3 and white is winning. Ray Robson also had some time trouble difficulties but managed to navigate things just a bit better. I hope that Akshat takes a serious look at this issue with his game and does everything possible to fix it. If he does, I am sure he will find his way back into this tournament, and will do much better next time Change Happens Faster Now I have no clue what this tournament is going to look like in 3 years. I bet that a lot of the players who seem like perennial contenders, will be desperately clawing simply to qualify for the tournament. There are so many young kids whose ratings are going to go up very fast. A few quick examples are: Top players like Onischuk, Shankland, Lenderman, Akobian and even Kamsky, may find themselves having a real challenge to even qualify for the event. I think Robson will be safe and Shankland is still improving too. I also expect Xiong to get his rating up so that he qualifies pretty handily, but the other seven spots are going to be hotly contested. Once again a huge congratulations to Fabiano Caruana and Nazi Paikidze on their tremendous Championship victories, and thanks to the St. Louis Chess Club and Scholastic Center for making it all happen!
