

1: Chinese Journal of Structural Chemistry

The cover picture shows an electricity powered dehydrogenative [3+2] annulation reaction of (hetero)arylamines with tethered di-, tri, and tetra-substituted alkenes for the preparation of indoline and azaindoline products.

Emphasis is on the synthesis, thermodynamics, kinetics, spectroscopy, structure and bonding properties of new and known compounds. Manuscripts should be submitted electronically via the Chinese Journal of Inorganic Chemistry Web submission site <http://www.cjic.org.cn/>: Please visit our Web site and follow the instructions to register and log in, and then submit your manuscript as directed. The registered author can log in and submit the manuscript in the Web site directly. An illustrated table of contents synopsis text plus graphic must be included with the submitted manuscript. The form must be faxed Fax No. Authors must provide their e-mail addresses and fax numbers in their cover letter. The name of the author to whom inquiries regarding the paper may be addressed should be marked with an asterisk. Contributions must be original and must not have appeared elsewhere. The prime criteria utilized to judge the quality of contributions will be their originality, significance, and novelty. Routine work and studies of narrow scope will not be published. Fragmentation of related work is unacceptable. Receipt of a contribution for consideration will be acknowledged immediately by the Editorial Office, by e-mail if an address is supplied. The acknowledgement will indicate the paper reference number assigned to the contribution. Authors are asked to quote this number on all subsequent correspondence. Ten free copies of electronic reprint will be sent to the corresponding author upon the publication of the manuscript. When a paper is suitable for consideration, the Editor will normally seek the advice of two or more reviewers. Authors are encouraged to suggest possible reviewers who are experts in the research area covered by the manuscript and have no professional connections with the authors. The decision to accept or reject a manuscript rests solely in the hands of the Editor and the author s will be informed of the decision in 90 days after the receipt of the manuscript. Failure to upload a revised manuscript within the allotted time will result in the inactivation of the manuscript. Revisions of inactivated manuscript will be treated as a new submission. Spelling may be British or American, but consistency should be maintained throughout. Manuscripts should be presented in the utmost conciseness consistent with clarity. This holds for all parts of the manuscript, including tables, footnotes, references, figure captions, abstract and body of the text. The preferred arrangement for a manuscript is as follows: Introduction, Experimental, Results including figures and tables and Discussion, Conclusion, Acknowledgement, References. Footnotes may be used when necessary. Each structure will be assigned a separate CCDC number that will be quoted in the subsequent crystallographic report. Single-crystal X-ray diffraction results are not, in general, acceptable as the only means of characterization of new compounds. Compounds must also be characterized by spectroscopic and analytical methods appropriate for the particular sample or compound such as elemental analysis, NMR spectroscopy, mass spectrometry, infrared spectroscopy, and electronic spectroscopy. The elemental analysis data and the corresponding molecular formula must be provided for a new compound. Structure diagram or structure scheme must be provided for a new coordination compound. The current address for individual author, if different from the place where the work was done, should be indicated by superscript number. The telephone number, fax number and e-mail address of the corresponding author should be provided in title page. Abstract should state briefly the purposes, methods for the work, significant results and conclusions. The length of the abstract should not be longer than 50 words. It should be so written that the readers could understand the reasons, methods and conclusions of the work without referring to the text. It should indicate funding source, title and contract number. In theoretical papers technical details as computational methods should be confined to an appropriate named section. A description of the equipment and condition used for the measurement should be given. No punctuation should be used. All numbering should use Arabic numbers only, such as 1, 1. Illustrations must fit a one- or two-column format on the journal page. Captions should be provided under the illustrations. Lines must be smooth, clear and no thinner than 0. Lettering and lines should be of uniform density. Photographs should be in high-contrast prints with a smooth or glossary finish and in single or double column width so that they will not have to be reduced. For best results, submit illustrations in

the actual size at which they should appear in the journal. If reasonably possible they should be designed to occupy fully a single column, which will take characters and spaces, or the full width of a page, which will take Care should be taken to avoid any arrangement that unduly increases the depth of a table. Graphics figures, tables, structures, schemes, charts, TOC graphic must be placed in the manuscript file, numbered consecutively, and correctly labeled. All the graphics and tables must be inserted in the text near the point of first mention, not grouped at the end of the text. SI units and symbols should be used throughout. These should be listed in reference section following the text. Repetition of references should be avoided by using the superscript number corresponding to the original references. Bibliographic references to classified documents and reports or to the unpublished material not generally available to the scientific public should not be used. Names of three authors should be listed if more than three, the et al should be used after the third author in upper and lower case letters starting with surnames last names , initials and first names. Last names and initials, first names should be separated by a comma. Where possible, composite references should be used: Inorganic High Pressure Chemistry. Progress in Inorganic Chemistry. Lippard S J Ed. Authors should consult recent issues for reference. Authors should explain briefly in a covering note or letter why they think that rapid publication of their work in the journal is justified. The communication should include title, author, laboratory where the work was done, text and references less than 5 citations. Communications are strictly limited to two journal pages, i. Manuscripts rejected will generally not be returned to the authors. Authors who do not agree to modify anything of the manuscript should state in advance. Changes should be kept to a minimum. All changes must be returned electronically and changes must be listed with their locations clearly identified. Extensive changes are subject to editorial review.
