In recent years, there have been advances in assessment, case conceptualization, treatment planning, treatment strategies for specific disorders, and considerations of new ethical and legal issues. Keeping track of advances requires monitoring diverse resources limited to specific disorders, many of which are theoretical rather than practical, or that offer clinical advice without providing the evidence base for treatment recommendations. This handbook was created to fill this gap, summarizing critical information for adult behavioral assessment. Assessment strategies are presented in context with the research behind those strategies, along with discussions of clinical utility, and how assessment and conceptualization fit in with treatment planning. The volume is organized in three sections, beginning with general issues, followed by evaluations of specific disorders and problems, and closing with special issues. To ensure cross chapter consistency in the coverage of disorders, these chapters are formatted to contain an introduction, assessment strategies, research basis, clinical utility, conceptualization and treatment planning, a case study, and summary. Special issue coverage includes computerized assessment, evaluating older adults, behavioral neuropsychology, ethical-legal issues, work-related issues, and value change in adults with acquired disabilities. Suitable for beginning and established clinicians in practice, this handbook will provide a ready reference toward effective adult behavioral assessment. This book highlights assessment techniques, issues, and procedures that appeal to practicing clinicians. Rather than a comprehensive Handbook of various tests and measures, The Clinical Assessment of Children and Adolescents is a practitioner-friendly text that provides guidance for test selection, interpretation, and application. With topics ranging from personality assessment to behavioral assessment to the assessment of depression and thought disorder, the leaders in the field of child and adolescent measurement outline selection and interpretation of measures in a manner that is most relevant to clinicians and graduate students. A comprehensive presentation of assessment strategies, actual strategies, and a review of specific populations for psychologists, psychiatrists, social workers and mental health social workers who work with children and adolescents. Chapter authors address only those strategies that have a firm empirical base and proceed beyond behavioral assessment to cover those assessment practices that are used more routinely by traditional clinicians. One of the most important practical problems in child psychology and psychia try is the differential diagnosis of emotional disorders. Until recently, the gener al mode of assessment had been to apply to children the characteristics of psychopathology that were evident in adults. In addition, there had been few assessment

tools available for use with children aside from modified versions of adult instruments. Understandably, this approach was controversial, and dissatisfaction with it led to the more recent knowledge that adult and child problems may be manifested quite differently. The third edition of the Diagnostic and Statistical Manual of Mental Disorders takes these factors into account much more extensively than previous editions. Furthermore, a great deal of research on methodology in child assessment procedures has emerged recently. Yet, in spite of these advances, practicing clinicians are still frequently at a loss in moving from the characteristics of the disturbed child before them to the final assignment of a psychiatric diagnosis. The focus of this book is to outline the various methods of viewing and categorizing the wide range childhood psychopathology, with special emphasis on the end product of making a differential diagnosis. Our goal was to make this book unique in several ways. First, we attempted to cover a wider range of disorders than is typical in currently available handbooks.
