Mar 08, C. About half the time, I think. I wonder if this is deliberately to try and reduce the perceived masculine bias in physics, or just in general to try and change the way we use language. Maybe we should be trying to prove ourselves in other ways, ways that would show us to be equal to m Interesting thing about this book: Maybe we should be trying to prove ourselves in other ways, ways that would show us to be equal to men, ways that would force everyone to respect us equally by showing them that we deserve it. On the other hand, how are we ever supposed to be equal if we are discriminated against in the language we use every day? Children growing up, learning to speak, are indoctrinated from their first overheard conversations to think that males are more important than females. How much of an effect does this have, though? Language is so important, more so than I think a lot of people realise. It shapes the way we think, the way we behave, our actions, thoughts, feelings. It is everywhere and few things escape its influence. Partly because the first time I encountered someone who used the feminine pronoun as the default Edward DeBono , it really shocked me. It stood out so much. And that scared me. Because if it seemed so unusual, there must be something wrong here. But even if you agree that it is important, what then do you do? Do you go half and half like in the textbook that this review is ostensibly about? Or just because men can cope with a microscopic amount of language discrimination when they are favoured in so many other ways? What do you do? Incidentally, this is an excellent textbook.
