

1: The Complete Professional Designer's Toolkit - Design Cuts

The Complete Professional Program (CPP) is a student-centric program designed to teach students the necessary skills to succeed in a professional environment. It is offered through the College's Avron B. Fogelman Professional Development Center.

It is designed for the kind of terrain it will be used on and the kind of tricks to be performed. Talking about options, there are lots of option to choose from. The professional rides you will find online are of two kinds: This allows your ride to be created from parts from different manufacturers. Custom Apex Build Complete or Custom? Many manufacturers around the world make complete rides that are made from high quality parts. All you need to do is secure the bars to the fork and the clamps. The choice between complete and custom is more of a personal one than a quality one. Custom rides allow a greater degree of personalization as you choose what parts go in and how your scooter looks like in when finally assembled. It also allows you to get a ride that is suitable to your needs and style. Complete rides, on the other hand, are ready to ride and convenient to buy. Important thing to mention here is the fact that there is no significant price difference between the two types. For beginners who are curious to do tricks on the driveways or parks, any ride would work. However, for experienced riders who perform different tricks and jumps and use the pro scooter more aggressively, a stronger ride with a firm grip is a must. Generally, the bigger the wheels and the body, the better it will be for professional rides. Price Range The great thing about any pro scooter is the price range, which is quite wide, making it pretty affordable for everyone. The bigger and the stronger the scooter, the higher the price is. Expect the price to be in the same range if you are building your own custom scooter. Some make high end complete scooters that are strong but pricey while some are known for their custom rides. It really comes down to you if you have any particular brand of preference. Take a look at our reviews of the latest top scooters in here. How Big Should It Be? Yes, the bigger the ride the stronger it is but it should not be bigger than the rider. For teens, a short bar and mm wheels are good enough. For larger riders, a tall handle bar and bigger diameter mm wheels are most suitable. This is one reason why you would want to have a custom scooter so that it gives you a balanced ride in accordance with your weight, height and experience. Large oversized bars and heavy decks can affect your ride and performance if you are not able to handle them with ease. Recently, we reviewed the best scooters for children and the best scooters perfect for toddlers. Be sure to check those reviews out until your kid has grown up taller. For adults looking to use a scooter to commute, we reviewed the top adult scooters for commuting to work here. AO Stealth 3 Decks Scooter Parts Buying Guide Many riders choose and design their rides themselves as it allows them the freedom to make it more personalized and combine the best parts available in the market. Based on the color, style, size, weight and material of the parts, the riders like to have a personal feel in their rides. What Are The parts? It is important to be familiar with the parts of a pro scooter, especially if you are going to take the custom building route. They have a fair share of parts but not as many as a motorcycle. Here are the important components that make or break your riding experience: Deck Deck is where you put your feet and it holds everything together. Made of strong alloy metal, the deck is usually up to 24 inches long and inches wide. The weight depends on the material it is made of and is generally in between 2 to 3. It has a head tube which holds the headset. The deck is made to be sturdy to withstand all the beating it receives as it is directly in contact with the wheels and stands the weight of the rider. Find out the best decks on the market in our latest review. Integrated deck has headset cups designed into it so it is easier to install and uninstall as compared with standard deck. Wheels Wheels, two in every ride, serve as the most important part. The rim is either plastic or aluminum made but for professional stunt scooter the latter is recommended as it is long lasting and sturdier than plastic. The edges of the wheels are made of a hard rubber known as polyurethane. The diameter of the wheels in your ride is usually , or mm. Generally the bigger and stronger the wheel is, the faster the you goes. However, soft wheels provide good grip and are easy on landing. Click here if you are not sure what the best wheels are for your scooter? The wheels, of course, are prone to wear because they are in contact with the ground. Ethic Dynasty Bars V2 Bars The handle bars where the rider keeps his hands come in different shapes and sizes. Click here

to find out the best bars of They are made of very strong steel and therefore are very durable. The kind of bars you choose depends on your preference but as a general rule, the best bar is the one that gives you a firm grip. Commonly, the bars come in black and chrome shades but there are other colors too. Forks The fork hold the front wheel of the scooter and just like the bar and handles, it is made of strong steel as well. Clamp This part is no less important as it acts as a unifier of the fork, the bar and the front wheel. Clamps are identified by the number of bolts: With clamps you would want to go with the larger one as it will be stronger and hold everything together better. Do you prefer riding Street, or Park? After watching the Proto video above, you may switch to street. But remember to be sensible kids, always wear a helmet that actually fits. Which Parts Should I Choose? These are the most fundamental parts that determine the performance and the life of your scooter. Choose the parts that are suitable for the terrain you are going to be riding on. Of course, choosing the parts yourself allows you greater personalization and each part comes in unique styles and colors. Compare every part from different brands and get the best out of them. The prices differ from brand to brand but ideally you would want to get the best parts while remaining in your budget. Get each part from the best brand known for that particular part and you have yourself a strong stunt scooter that complements you and your riding style. If you like your ride to be simple then focus more on the strength and make of the parts than the appearance. Showing 1â€™4 of results.

This bundle contains a huge amount of modern, professional resources, including 4 best-selling corporate fonts, professional mockups templates, infographics, contract templates, icons, and modern backgrounds, perfect for any graphic designer and freelancer.

Beauchef is a typeface with rough strokes that features subtle optical compensation and does not strictly follow the laws of perception. This typeface shows a very particular idiosyncrasy of form. Beauchef is as tough as advanced mathematics; however, it is as legible and exact as numbers themselves. This is an avant-garde typeface that resembles the development of mathematics, but at the same time it is as conservative, calm and respectful as clients who require its services. It was designed as a font for fast reading from a distance, which saves horizontal space in the text composition, making it a very good alternative when composing long phrases in reduced spaces, with high readability in various sizes due to its ample counters. It has round corners that reduce the irradiation that reflective materials in signs produce. This family is composed by 8 fonts, 4 weight variations and 4 inclination variations, which include European accents marks, ligatures, fractions, ordinals and tabular numbers, in addition to a pictogram set that complement applications for wayfinding and maps. Easier to modify for prints. Turn your data to awesome graphics! Big set of infographic vector elements and business brochures. Modern styled graphics for data visualisation. Use in website, flyer, corporate report, presentation, advertising, marketing etc. Rescale to any size. Included in this set: Infographic Brochure Elements 9 Highly popular infographic tools series now in brochure composition. Infographic Brochure Elements 8 Highly popular infographic tools series now in brochure composition. Infographic Brochure Elements 7 Highly popular infographic tools series now in brochure composition. Infographic Brochure Elements 6 Highly popular infographic tools series now in brochure composition. Infographic Template Vector Kit New stunning and modern design for your infographic projects. Inspirational, simplified and cleaned up design in the same package. Impact your audience with these easy to edit infographic elements. Works best with Adobe Illustrator CS6. All elements seen on preview included in download. Just drag and drop them to create unique beautiful scenes. If the item is made of one material there is no mask for it, as you can simply add an adjustment layer to whole item. High quality effects give a photorealistic result. Just open the psd file and place your design on the objects. All objects and shadows are fully separated so you can easily play with them and create your own original custom scene. Present your projects in a way that is visually interesting and attractive to your clients. Save time and make your brand look more enticing and more professional. Good presentation is half of success.

At Complete Professional Recovery, professionalism is a top priority. We understand that our clients want their accounts recovered, but they also want their clients to return for additional services.

No need to worry. Avoid uneven lines and unwanted air bubbles by letting our professionals grip your new deck for you. Professionally gripping the skateboard deck. Insuring no bubbles and a nice clean cut around the edge. Pressing 8 skateboard bearings into 4 wheels. Each bearing will be seated with a professional bearing press and will include bearing spacers when necessary. Assembly of skateboard trucks and wheels. Both truck assemblies will have wheels installed with proper speed washers and torqued to the appropriate tolerance. Installing both truck assemblies to the gripped deck and assuring proper torque tolerance on all hardware. An autographed Warehouse Skateboards hang tag from your builder. Skateboard Hardware Sets Skateboard hardware is used to connect the skateboard trucks to the skateboard deck. Skateboard hardware refers to the bolts and locknuts used when building a board. The bolts can have an Allen or Phillips head. Skateboard hardware comes in many different lengths, and often includes one different colored bolt so that the rider can mark the nose of their board. Each skateboard hardware set includes 8 bolts and 8 locknuts needed to assemble one skateboard. What size hardware do I need to put together my skateboard? In general, a mid-sized truck works well for most skateboarders, but high or low trucks may be preferred for different styles of skaters. LO - Provides extra stability for flip tricks, designed for small wheels mm wheel size recommended. MID - Good all-around profile for street or park mm wheel size recommended. It makes direct contact with rails and curbs. The hanger holds the axle on which the wheels are mounted. Hangers weigh about oz, with lighter ones available. For additional info visit our Construction refers to the materials used in fabrication or the specific brand technology. For additional info visit our Skateboard Buying Guide The average width of a skateboard deck is 7. Width is influenced by the size of the rider and the type of riding. Bigger riders and those skating ramps typically prefer a wider deck. Street skaters usually choose a smaller deck. Choose your skateboard deck according to the width, not length. Here are some general guidelines: Size 3 shoes or smaller. MINI - Deck width: MID - Deck width: FULL - Deck width: If you are a beginner, choose your deck according to the width, not the length. The width you need depends on your size, skating style and personal preference. Cruisers, Old School, Freestyle, Longboard and Downhill all refer to a skateboarding style and the corresponding shape. For additional info visit our Length is measured from the tip of the nose to the tip of the tail. Average board length is 28"- 32" and longboards can range 32" and larger, but length is only referred to by advanced skaters. For additional info visit our Wheel size or diameter - All Skateboard wheels are measured in millimeters mm. The smaller the number, the smaller the wheel. Smaller wheels are slower; bigger wheels are faster. Harder wheels are faster; softer wheels are slower but have better grip. Designed for a smooth ride cruising, longboards, hills and rough surfaces. Great for beginners skating street, skate parks, ramps and pools. Ineffective on slick and rough surfaces. These are pro wheels. For additional info visit our Skateboard Wheels Buying Guide The laws for skateboarding helmets vary from state to state. Many states require that skaters wear a helmet under a certain age, and some states like California make all skaters under 18 wear a CPSC Certified helmet at all times. For additional info visit our.
