*Creating Cg Manga With Manga Studio by Cg Manga Group. Paperback available at Half Price Books® www.enganchecubano.com*

The powerful Clip Studio Paint drawing engine uses the maximum capability of the Apple Pencil to provide the best drawing touch so you can carry out your entire workflow on the iPad alone. Now you can enjoy a superior drawing experience anywhere you go. Draw comics anywhere with the iPad Packed with unique specialist technology for creating comics and manga Draw backgrounds and effects using rulers Clip Studio Paint has advanced functions to help you draw small items, backgrounds, and effect lines for your work. Make more realistic comics and manga by drawing freehand with perspective rulers that allow you to easily create backgrounds with perspective, symmetrical rulers that allow you to draw symmetrical shapes around a line or multiple points such as two- or three-point symmetry as well as the concentric circle ruler, radial line ruler, and parallel line ruler. Use rulers to draw precise, clean lines Create perspective lines and symmetrical lines Automatically create effect lines Use the sub tools designed for action lines and speed lines to automatically create complicated effect lines. Draw radial lines around a fixed center Create speed lines in a fixed direction Use 3D drawing figures as a foundation layer You can pose 3D drawing figures and use them as a foundation layer for your work. The stiffness and movable range of the joints are based on the actual structure of the human body, allowing you to create natural, unforced poses intuitively using the mouse. You can also import pre-made pose files. It is possible to change the body shape and proportions of the default drawing figures. Draw with 3D models Change the body shape freely Unlimited tones Tones are an essential part of manga, and Clip Studio Paint has plenty of tone functions for you to use. You can add or remove areas as necessary and even freely adjust the tones after applying them. You can change the tone pattern or distort tones along the curved lines of the body. Many materials are available for you to use as pattern tones. Paste screentones that look as if they were drawn by pen Transform your creations along a contour Over 10, free materials! You can also share your original materials with the world. Balloons and drawn text Clip Studio Paint makes it easy to draw speech balloons. You can also easily enter text and make adjustments such as adding balloon tails. Drawn text such as sound effects can be drawn to suit the style of your work using pens and brushes. Meanwhile, the iPad version includes fonts optimized for comic creation. Quickly create speech balloons for comics Pens that are perfect for adding sound effects Smoothly create complex frame borders You can create frame borders easily using the frame border tool and frame border cutting tool. Frame borders can be created simply by dragging, and you can create bleed frames and frame borders in complicated shapes. You can create a frame border folder for each frame and use these folders to manage images and materials. Easily create comic frames Automatically convert photos to manga style Clip Studio Paint converts photos to manga style by adding outlines and shading with tones. You can convert the outline and tones to separate layers using [LT conversion of layer], making it easy for you to improve the quality by modifying the lines, changing the tone settings, and erasing parts. Transform into comic or pop art style Draw backgrounds and objects by converting 3D data You can draw backgrounds and objects at the desired angle by automatically converting 3D models to lines and tones. This allows you to create even better comics and manga than when simply converting image data. Use 3D materials for comic backgrounds All the management functions you need to create your comic or manga Multi-page management You can manage comic or manga files made of multiple pages. The Story window allows you to add and rearrange pages and change the page format between a spread and single pages. Manage multi-page comics in a single program Suitable for two-spread comics Check your finished work in the 3D preview You can check 3D preview of your multi-page work to see what your comics will look like when it is printed and bound. Preview your printed comic in 3D Export functions advanced enough for commercial comics and manga Import and export files in Photoshop format Clip Studio Paint is compatible with Photoshop, and data can be exchanged between the two programs. This allows you to display your work as it will be seen when it is printed, without needing to use another tool. Create multi-page works and export them to PDF to share as a single file. On our official Clip Studio YouTube channel, we release videos with

subtitles explaining how to use the software and its many great features to create your own comics. Customizable UI to make your work easier Auto actions allow you to perform multiple operations at once Operations that you perform frequently or repeatedly can be registered as auto actions and performed with one click so that you can work more efficiently. Perform complicated actions in just one click Customize the layout and switch the interface according to your needs You can customize the layout by placing certain palettes together or on their own so that you can use them more easily. You can save layouts created for a particular style or purpose such as for comics or for illustrations as a workspace along with shortcuts and command bar settings so that you can switch to these drawing conditions at any time. Arrange your screen layout as you like Change the color of the interface These are just a few of the features in Clip Studio Paint that make it fun and easy to create your comic or manga. Download the trial version to see just how easy it is to draw in this program that even professionals swear by! Computer Make sure you choose a computer with the necessary system requirements for the software you want to use. Although computers with large memories and high CPU tend to be more expensive, they are much better for creating art. Choosing a display with a resolution of WXGA x or better will ensure you have enough space to draw. You can even use a notebook PC to draw comics if the system requirements are met. We recommend that you use a tablet PC with touch capabilities. With these, you can control the screen with your fingers and draw directly on the screen. If you choose a model with pen pressure sensitivity, you can use special-purpose pens to draw in different ways using pen pressure. Pen Tablet Pen tablets are input devices that connect to your computer. When you draw on the tablet with the pen, you can operate the computer. As well as usual mouse operations, you can also draw lines with the pen. If you choose software with pen pressure sensitivity, you can create art that reflects the pen pressure. One expensive variety is screen tablets, which allow you to draw directly on the tablet screen. Software If you draw a comic traditionally, you need paper, pencils, pens, brushes, ink, and rulers. You can use software to create comics using the same kind of techniques as these materials. Clip Studio Paint includes fully customizable pen, pencil, and brush tools. You can choose your favorite settings to draw your preferred style of lines. The software also includes a wide variety of screentones for comics and manga. You can use this software for both black-and-white and color comics, making it perfect for print comics, web comics, comic strips, and manga. Making a Comic This is the traditional process of creating a comic on paper. Storyboard Before starting on the draft of your comic, create the storyboard. At the storyboarding stage, you draw rough sketches and decide on the story flow and composition. You can make simple pencil sketches for the storyboard. Usually, this is done on separate paper than the actual comic, but if you work digitally, you can draw this directly in the comic document. Draft While referring to the storyboard, draw a draft of your comic in pencil on the comic paper. When drawing digitally, you can use different layers and draw the sketch by tracing over parts of the storyboard. Layers act like transparent film, so they are very useful when stacked up. You can also add frames and text at this stage if working digitally, and it is easy to adjust these at later stages. Inking Here, you draw the line art by inking over the draft in pen. Once the inking is complete, erase the pencil draft with an eraser. When drawing digitally, you can add new layers for the inking and draw with the pen tool. In Clip Studio Paint, you can easily use the Eraser tool to edit lines drawn with the pen tool. You can hide the draft and storyboard by turning layer visibility off. Coloring After drawing the line art, use brushes or markers to add color. Make sure you wait for the painting tools and ink to dry, then layer up darker areas or highlights. However, when you want to use the brush strokes to blend colors, you need to color before the tools dry. If you fail, you will need to start from the beginning again. When creating a comic digitally, you can select the area you want to paint and simply click to fill in the area. Even if you fail, you can undo the last step and try again in different ways.

*The world's leading comic and manga creation software, CLIP STUDIO PAINT PRO 5 (formerly Manga Studio) delivers powerful cutting edge drawing and coloring tools, making it essential for.*

Must Have Basics 1 Pencil Everyone needs a pencil to start off drawing. Most people like to use the 2 or HB pencil. Artists pencils are classed based on the lead used. B refers to soft lead and tends to easily smudge while H refers to hard lead. H pencils are less likely to smudge but are more prone to making indents on your paper. Another option from the common pencil is the clicky pencil which saves you from constant sharpening by just replacing the lead. For those using regular pencils, you can extend the life of your pencils by using a pencil extender which tends to be metallic and looks like the end of your pencil sans eraser. The paper in them are thicker and can handle erasing more than printer paper. Sketch and Doodle Pads come in various sizes. Choose a size that will work for you i. The most common eraser is the pink one aka Pink Pearl but the better eraser is the white one. When you use the pink eraser, it tends to leave a pink mark especially if you rub it really hard on the paper. Avoid that by getting the white eraser. For ease of use, some people use the clicky eraser. Like the clicky pencil, the eraser can be refilled as you use each stick up. Other erasers include the kneaded eraser which is like handling putty or clay. To "clean" it, you just need to knead it i. Starting Off 1 Inking Pens The are various "inking" pens and the most basic of those that are in pen form i. Whether you used refillable inking pens or not, they all come in various tip sizes. The tip is what determines the size of the line that is drawn. You can also build your own light box using a wooden box, a glass or plexi-glass, and a bulb. Just visit your local hardware store for the materials, take the time to assemble it, and viola! The most useful of the templates are shape and curved templates. Shape templates have pre-cut shapes stamped into the form such as circles, ovals, squares, diamonds, and rectangles. Instead of wasting your time in measuring and perfecting these shapes, the template saves on time and effort. The other useful template to have are curved tamplates which are used for making motion and action lines. You can get more templates such as lettering and other fancy designed outlines but the shape and curved templates are the most important templates to have on hand. There are two types of compasses: Not just any blue pencil will work - it has to specifically say "non-photographic". Artists use this special pencil particularly when doing roughs and sketches. When their work is photocopied or printed out - the blue lines will not show up but the black lines will. If you push the blue pencil hard enough, it will show up on the final product. The trick is to not draw too heavily. This is very useful for those of you interested in animation. You can save on materials by not getting this but as always, your time is the trade-off. Instead of using a 12" ruler back to back to measure your stuff, an 18" ruler will get the job done without that extra hassle. Doujinshi paper are pre-lined and numbered which makes it easier to draw your lines and where to confine your drawings. Drawing a comic layout is very time consuming! Advanced 1 Brushes The brushes is mainly used to apply the correction fluid aka white out. You can also use it for inking in large areas of black background. Styles vary from dots, lines, cross-hatches, and things like feathers. You can get actual sheets of tones or you can use digital tones. Japanese ready-made manuscript paper tend to be on the smaller size compared to comic book paper which is about 11"x15". When submitting your material to publishers, make sure you check out their specifications and get the appropriate paper. To cut and to scratch it to make effects. If you stick something to it accidentally - good luck prying it off. It comes in big and smaller bottles. I suggest you get the small bottle and just refill it with the bigger bottle. The best ink is one that is waterproof and fadeproof. Much like calligraphy, the tip determines the width of the line. There are all types of tips and just as many mankers. Find and use whats best for you and remember to wipe clean your nib from ink after each use. Most colored pencils have hard lead but you there are soft leaded colored pencils as well. Watercolors come in tubes, in palettes, and in pencil format. The watercolors that turn out the best colors are Prang. Others tend to turn out flat in the end. Ventilation is not needed unlike oil paints. Aside from drawing on paper, air brushes may be used to color other things as well such as shirts. They help depict certain poses you may have trouble picturing or drawing. There are three types of figurines: It helps to keep colors consistant if you mix your paints on your own instead of buying that particular color. Typical portfolio wallets

are made out of paper and have a string to close the folder. More modern wallets are made out of plastic and close with velcro. Some may even have a handle at the top for easier carrying. Other storage devices include boxes; in paper or metal; and wooden storage units - vertically or horizontally inclined. Layers allows you to work with certain parts of your drawing one at a time without affecting other areas. There are artists out there who use various softwares and even use photo-editing softwares for some neat filter effects. Most graphic software has a trial period - look around and try them out! Created in Japan, this software has nifty features like the other graphic softwares mentioned above. This software also happens to include some CG tutorials from various artists. It has all the features you would want on a manga software from tones, fonts, and more. It also has the usual balloons, lettering and usual manga creating features. There are two types: Debut and EX with the latter being the "Professional" version, costing more but sporting more tones and 3D models.

*Just like you I was thinking about the possibility to lay my hands on additional 3D objects for my copy of Manga Studio www.enganchecubano.com it comes with a whole bunch of 3D models that can keep you busy for a very long time you will come to the point where you want just that object that isn't in the package.*

For this tutorial, version EX4 was used. Open up Manga Studio. Click image below for an example. For the sake of this tutorial, the assumption is you are creating a strip to post on your webcomic site. If doing it for print, consult the printer for exact dimensions and specifications. Once you click okay, you will see that, by default, two layers are created. I love this mode and do all my sketching in this mode. The image below is what you will see. See yellow arrow in sample image Click for Larger View This mode automatically creates a Panel Folder and Layer for you once you have drawn your desired shape. I use the Grid to help me make a nice, wide rectangle. I space it off three 3 grid spaces all around. The image below shows the shape as I drag it out. The finished Panel Layer will look like the image below once you select the Layer itself. The Red Border tells you which panel you have selected. Since we have not yet divided up this panel, the entire panel has a red border. Now left-click and hold the button down anywhere inside the panel layer where you wish to create a new panel. I usually click near the top of the outer panel line just to give myself a visual reference. Most times, it will be vertical, but you have the option of making it any angle you wish. A whole new Panel Folder and Layer will be made and it will now be highlighted red. See the example below. By repeating this process, you can create as many panels as you wish. Typically I create three or four panels, but you may be as creative as you want and Manga Studio will create the exact panels you want! I have set up a standard comic file that has a single panel in it along with simple word bubbles so all I have to do is copy and edit the layers as I need. This is a handy thing to set up as it will save you a lot of time recreating these panels each time you want to draw a comic. I do all my sketching, lettering, inking, coloring and shading in Manga Studio. It allows me to maintain my 3-times a week webcomic schedule while still being able to do other freelance work and help with my family. I hope you found this tutorial helpful! Any comments may be sent to Byron theComic.

*The following illustrates the workflow when using Manga Studio Manga Studio EX also features Since Manga Studio is digital, you don't need to worry.*

## 5: CLIP STUDIO PAINT: Software/app for creating comics and manga

*I'm attempting to learn how to use Manga Studio on my laptop at the moment, so the Creating CG Manga With Manga Studio: A Beginner's Guide is perfect timing for me, and great motivation for anyone else who's been procrastinating over drawing!*

There are reports on the internet of people wasting days. The bad news is that I was really looking forward to trying this software that I purchased from Amazon. This installed without problems but whenever I tried to run the program, Windows would crash with the banner "Windows has stopped working". I uninstalled the program and tried to install the free day trial download from the Corel site with the same result. I tried to contact the Chat support twice and got the message "Chat cancelled - no one available". I have installed a lot of software on my computers over the past 30 years and seldom have been so disappointed. I highly recommended you try the free trial software on your computer before you buy it. I had budgeted several days to learn a new painting program and I was not willing to give up. This program was released in October without fanfare. I downloaded the software from the Corel Web Site and installed on my computer without a problem. My first attempt at using Corel Painter Lite has been very positive. This program appears to be designed for a beginner digital painter like myself. In fact, it may meet all my needs. I checked several internet help sites. I did this and Corel Painter Lite is running again. With my recent success in finding the problem with Corel Painter Lite and installing the new drivers for my graphic tablet, I decided to revisit my failed attempts to get a satisfactory installation of Painter  Once again I downloaded the trial version of Painter 12 and installed it on my computer. I found that the Painter Lite is a basic painting program with few canvases, brushes and instructional videos. It also lacks tracing paper, cloning and auto-paint functions. If you want the maximum capability of transforming a photograph into a painting, you need Painter  I would have rated Painter 12 higher were it not for all the difficulty I experienced during installation.
