

## 1: Nano Sim Template | Cut MicroSIM Into Nano-SIM [Guide]

*Only attempt to cut the SIM card with very good scissors, otherwise you might break it. My preferred method is using a Chef's Knife, placing it on the markers (from Step 2) and gradually increasing the pressure to make a clean cut.*

There are many templates but some are much better than others. That link actually has an image they borrowed from someone else but all the links to the original file are bad because the domain does not exist anymore. Sim cutting template You can download the image file directly here. If you are using a Mac, open up the image in Preview and then use the keyboard shortcut command-p to bring up the print dialog. The important thing is the scale. Tape your Micro-Sim to the template. You can make yourself some double-stick tape like this And here it is on the template: My Micro-Sim Taped to the template Step 4: Use some kind of straight edge and a fine permanent marker and draw the lines on the Sim to mark it for cutting. Cut the Sim on the lines with a sharp scissors. This is the kind I used: Heavy-Duty Scissors Here I have made a couple cuts: I was lucky to have a real nano sim to refer to but you can use the sim tray of your phone for reference Step 6: Put the cut sim in the tray of your iPhone to check for size and cut a little more off if necessary. If it is a tiny bit you need to cut off you can just use your sandpaper to take off a little more from the edge. I also cut the corners off just a tiny bit to make it not so sharp. I used grit sand paper because that is the first sandpaper I came across in my workshop. I would have preferred actually but worked fine. An easy way to hold the Sim while you sand it is to fold the end over on a piece of tape and then place the sticky side on the sim. My sanded sim I also sanded the edges and the corners a bit to make them nice and smooth. Clean up the sim and put it in your iPhone.

## 2: Did you know: you can cut a microSIM to nanoSIM yourself easily

*Disclaimer: Once you cut your card, there's no going www.enganchecubano.com it fits the nano-SIM form factor it won't work as a micro-SIM card anymore, meaning you won't be able to swap your card back and forth between devices that take different card sizes.*

You can easily cut mini or micro cards to the new nano sims to fit in your phone. Paper template required to cut the card is included in the article. Although, there are cutters available in the market that can easily cut bigger SIM cards into smaller ones, but it is also not very difficult to do it manually at home. DIY is always fun! The latter two types are commonly referred to as SIM cards. The image below depicts the size of each SIM Standard source: Wikimedia Commons, Justin Ormont In the above illustration, you will notice that the size of nano SIM has reduced to the metal contact area. It is a simple process but still needs to be done carefully to avoid damage to the SIM. It is needless to say that once you trim the card there is no going back. It means you cannot use it as a micro SIM anymore. For this trimming you will need: A template that would be apt for your device Kitchen scissors as they are sharper A good marker pen Tape Sand paper or a good nail filer Collect all these things and sit down to do cutting. Here are the steps to do the trimming: To save you time, we are giving the template right below: Fix the edges with the tape and ensure that you do not tape the metal area. Using a ruler, draw the two horizontal and vertical lines and the single diagonal line to create the outline for your nano SIM as displayed in the above illustration. Remove the SIM from the sheet and trim it so that the marker lines are partially visible. It will help you trim it perfectly. Use a nail filer or sand paper to gently smooth on all the five sides so that the marker lines are not visible. This part of the trimming should be done patiently multiple times till it fits the nano SIM tray perfectly. In some cases you may have to rub the plastic side of the SIM with sand paper to ensure that it sits flush with edge of the tray. Be cautious and do not end up rubbing the metal side. In case, you mess up your SIM, do not worry at all. Just ask your cellular service providers to give you a new nano SIM card for use in new phone. So, if you do decide to carry out the conversion yourself, do keep the risks involved in mind. Should you have any question on this topic, please feel free to ask in the comments section.
