Effective immediately, all terminal curbsides are for active loading and unloading only. Read More.

Planning[edit] As early as , before the area had an airport, Dallas proposed a joint airport with Fort Worth. Fort Worth declined the offer and thus each city opened its own airport, Love Field and Meacham Field , each of which had scheduled airline service. American Airlines and Braniff Airways struck a deal with the city of Arlington to build an airport there, but the governments of Dallas and Fort Worth disagreed over its construction and the project was abandoned in . Although the Fort Worth airport was eventually abandoned, Dallas Love Field became congested and had no more room to expand. Following an order from the federal government in that it would unilaterally choose a site if the cities could not come to an agreement, officials from the two cities finally agreed on a location for a new regional airport that was north of the abandoned GSW and almost equidistant from the two city centers. The land was purchased by the cities in and construction began in . Area voters approved the airport referendum and the new North Texas Regional Airport would become a reality. In , the design was revised to provide for semicircular terminals, which served to isolate loading and unloading areas from the central highway, and to provide additional room for parking in the middle of each semicircle. British Airways later briefly flew Concorde to Dallas in as a substitute for its ordinarily scheduled DC service. Prior to the closure, Delta had a Aerial view of DFW in In the airport authority announced plans to rebuild the existing terminals and add two runways. After an environmental impact study was released the following year, the cities of Irving , Euless and Grapevine sued the airport over its extension plans, a battle that was finally decided in favor of the airport by the US Supreme Court in . The seventh runway opened in . Terminal D, built for international flights, and DFW Skylink , a modern bidirectional people mover system, opened in . It opened in the spring of . Until the late s, they were designated by a number 2 being northernmost, 4 being southernmost and a letter suffix "E" for East, "W" for West. This system was later scrapped and the terminals are now lettered from A to E. Terminals A, C, and E from north to south are on the east side of the airport, while Terminals B and D from north to south are on the west side. A consequence of this layout is that connecting passengers had to walk extremely long distances between gates in order to walk from one end of the semicircular concourse to the other, one must walk the entire length; there were no shortcuts or moving walkways between the ends. It was replaced by Skylink in April after serving approximately million passengers. While Terminal C was originally part of the multibillion-dollar renovations, American Airlines in asked to delay renovations of the terminal. Terminal A originally named "Terminal 2E" is fully occupied by American Airlines for domestic flights and some international departures. A satellite terminal formerly named Satellite Terminal A2 near Terminal A was used due to gate restraints. Passengers were taken to the satellite via shuttle buses from gate A6. It now serves as a Corporate Aviation terminal for private and corporate aircraft, reopening in December . As of January renovations in Terminal A are now completed. Braniff was its main occupant until May . By the early s, Terminal 2W housed most carriers other than American and Delta. On December 13, , United moved to Terminal E to join its new alliance and later merger partner Continental, at which point American Eagle became the sole operator in Terminal B. Terminal B has 47 gates: They will either destroy it once the future Terminal F is finished, or renovate and keep it for other carriers to use so American and other airlines do not have to give up gate space. Interior of Terminal D. The terminal features ticketing positions and a federal inspection facility capable of processing 2, passengers per hour. The terminal officially opened on July 23, . Air-conditioned skybridges with moving walkways and elevators connect the garage to the terminal, and an arrivals canopy roof shields pedestrians from inclement weather as they enter and exit the terminal. In addition, Terminal D hosts a Minute Suites hotel located inside security. However, Emirates never switched back to the A following that, continuing flights with a ER. Terminal D has 28 gates: Delta branded the terminal "Easy Street" and marketed this term to passengers. Terminal E was formerly the only terminal at DFW in which American Airlines had no presence, but this changed after their merger with US Airways , when they combined gates. Terminal E is connected to the other terminals by Skylink, but lacks a walkway to the other terminals. Terminal renovations were completed in

August The satellite, opened in to accommodate Delta and was later used by Delta Connection carriers before being closed when Delta closed their DFW hub in It was briefly used in to house federal workers who evacuated New Orleans International Airport during Hurricane Gustav. American plans to have renovations completed and be fully moved into the terminal in Spring The Skylink was designed and built to accommodate Terminal F, [62] as the track follows a roughly semicircular path over the parking lot, similar to its path through the other terminals, instead of running in a straight line between Terminals D and E; with straight sections that are long enough to allow for station platforms. DFW Airport CEO Sean Donohue has said that Terminal F "will likely be in our future," as the airport anticipates "serving almost 70 million customers annually by the end of the decade from the 60 million we serve today.
