

1: Histoire du gaz manufacturÃ© â€” WikipÃ©dia

"Decouverte et Creation, cinquieme edition" is barely better than no text at all, especially since the price is obscene. Most teachers could probably do a better job.

Use In-Place eDiscovery to search across all mailbox content, including deleted items and original versions of modified items for users placed on In-Place Hold and Litigation Hold. You need to be assigned permissions before you can perform this procedure or procedures. In an Exchange hybrid organization, your on-premises Exchange mailbox must have a corresponding mail user account in your Office organization so that you can search Exchange Online mailboxes. Or, if you sign in with an account that only exists in Office, such as the tenant administrator account, that account must be assigned an Exchange Online Plan 2 license. You can create additional Discovery mailboxes. For details, see [Create a discovery mailbox](#). After you create the search, you can use the Exchange admin center EAC to estimate and preview search results or copy them to a discovery mailbox. For information about keyboard shortcuts that may apply to the procedures in this topic, see [Keyboard shortcuts for the Exchange admin center](#). Demander une assistance dans les forums Exchange. Ask for help in the Exchange forums. As previously explained, to create eDiscovery searches, you have to sign in to a user account that has an SMTP address in your organization. On the Mailboxes page, select the mailboxes to search. You can search across all mailboxes or select specific ones to search. In Exchange Online, you can also select Office groups as a content source for the search. To create an In-Place Hold, you must select [Specify mailboxes to search](#). For more details, see [Create or remove an In-Place Hold](#). On the Search query page, complete the following fields: **Include all user mailbox content:** Select this option to place all content in the selected mailboxes on hold. **Filter based on criteria:** Select this option to specify search criteria, including keywords, start and end dates, sender and recipient addresses, and message types. Note **Les champs De:** That means any message sent or received by any of the specified users and matches the other search criteria is included in the search results. On the In-place hold settings page, you can select the **Place content matching the search query in selected mailboxes on hold** check box, and then select one of the following options to place items on In-Place Hold: **Select this option to place the returned items on an indefinite hold.** Items on hold will be preserved until you remove the mailbox from the search or remove the search. **Specify number of days to hold items relative to their received date:** Use this option to hold items for a specific period. For example, you can use this option if your organization requires that all messages be retained for at least seven years. You can use a time-based In-Place Hold along with a retention policy to make sure items are deleted in seven years. When placing mailboxes or items on In-Place Hold for legal purposes, it is generally recommended to hold items indefinitely and remove the hold when the case or investigation is completed. Click **Finish** to save the search and return an estimate of the total size and number of items that will be returned by the search based on the criteria you specified. Estimates are displayed in the details pane. Click **Refresh** to update the information displayed in the details pane. This example creates the In-Place eDiscovery search named `Discovery-CaseId` that searches for items containing the keywords `Contoso` and `ProjectA` and that also meet the following criteria: **Discovery Search Mailbox Types de messages:** After using Exchange Online PowerShell to create an In-Place eDiscovery search, you have to start the search by using the `Start-MailboxSearch` cmdlet to copy messages to the discovery mailbox specified in the `TargetMailbox` parameter. For detailed syntax and parameter information, see [New-MailboxSearch](#). After you create an In-Place eDiscovery search, you can use the EAC to get an estimate and preview of the search results. If you created a new search using the `New-MailboxSearch` cmdlet, you can use Exchange Online PowerShell to start the search to get an estimate of the search results. In the list view, select the In-Place eDiscovery search, and then do one of the following: **Selecting this option restarts the search and performs an estimate.** Search Estimates are displayed in the details pane. **Click Preview search results in the details pane to preview the results after the search estimate is completed.** Selecting this option opens the eDiscovery search preview window. All messages returned from the mailboxes that were searched are displayed. The mailboxes that were searched are listed in the right pane in the eDiscovery search preview window. For each mailbox, the number

of items returned and the total size of these items is also displayed. All items returned by the search are listed in the right pane, and can be sorted by newest or oldest date. To view the items returned from a specific mailbox, you can copy the search results and view the items in the discovery mailbox. You can use the EstimateOnly switch to return only get an estimate of the search results and not copy the results to a discovery mailbox. You have to start an estimate-only search with the Start-MailboxSearch cmdlet. Then you can retrieve the estimated search results by using the Get-MailboxSearch cmdlet. For example, you would run the following commands to create a new eDiscovery search and then display an estimate of the search results: To display specific information about the estimated search results from the previous example, you could run the following command: After you create a new eDiscovery search, you can copy search results to the discovery mailbox and export those search results to a PST file. For more information, see: After you run an eDiscovery search estimate that includes keywords in the search criteria , you can view keyword statistics by clicking View keyword statistics in the details pane for the selected search. These statistics show details about the number of items returned for each keyword used in the search query. However, if more than source mailboxes are included in the search, an error will be returned if you try to view keyword statistics. To view keyword statistics, no more than source mailboxes can be included in the search. If you use Get-MailboxSearch in Exchange Online to retrieve information about an eDiscovery search, you have to specify the name of a search to return a complete list of the search properties; for example, Get-MailboxSearch "Contoso Legal Case".

2: Découverte et Cheminement: Elie Humbert - « Etre quelqu'un » ?
