The scheme was administered by Local Insurance Committees covering counties and conurbations which held a panel of doctors prepared to work under the scheme. Up to the present the doctor has not been adequately paid, and therefore we have had no right or title to expect him to give full service. In a vast number of cases he has given his services for nothing or for payment which was utterly inadequate. There is no man here who does not know doctors who have been attending poor people without any fee or reward at all". However their behaviour has rarely been that of self-employed entrepreneurs. They have more often behaved as salaried professionals who defend their right to control what they do and how they do it. In Scotland GP practices are contracted by the Health boards. The capitation fees was based on the number of patients the GP had on his list. Proposals to make GPs salaried professionals were rejected by the profession in In the capitation started to be based on the number of doctors, rather than patients. From to the contract was an individual one. Virtually every doctor working in general practice had a personal contract with the local NHS and patients were registered with a named doctor. It became a driving force in developing postgraduate training for doctors wishing to enter general practice. One of their complaints was that there was no provision for improvement of practices. A GP who employed a secretary or nurse was paid no more than others who did the minimum. The main problem, however, was in comparison to the pay and status of hospital consultants. Have adequate time for every patient. Be able to keep up to date. Have complete clinical freedom. Have at his disposal all the diagnostic aids, social services and ancillary help he needs. Be encouraged to acquire skills and experience in special fields. Be adequately paid by a method acceptable to him which encourages him to do his best for his patients. Have a working day which leaves him some time for leisure. Fees for service were introduced for interventions related to the prevention of disease. There was considerable pressure from doctors for the introduction of charges to patients but the Minister, Kenneth Robinson and the leadership of the BMA resisted this. Maternity Services and contraception were optional services which attracted additional payments. GPs were allowed to practise privately, to hold part-time hospital or other appointments within the NHS, to work in industry or for an insurance company, although few did very much private work. The contract which was imposed by Kenneth Clarke after it was rejected in a ballot, linked GP pay more strongly to performance. The number of professional members on the Family Health Services Authority was considerably fewer than had been the case with the Family Practitioner Committee. Targets were set for cervical smears and immunisations. GPs were required to give health checks to new patients, patients over 75 and those who had not seen a GP for 3 years. The GP Fundholding scheme gave them a budget for commissioning for the first time. The government also introduced a new locally negotiated personal services contract for general practitioners in , permitting them to be salaried, paid by the session, or work as locums. Every practice gets a share of a total amount of money allocated towards primary care in GMS practices the "Global Sum". Furthermore, the practice gets an adjustment for rurality greater rurality causes greater expenses , for the cost of employing staff the "Market Forces Factor" MFF , which captures differences in pay rates between areas, e. The application of the formula to this reduced "Global Sum" would have resulted in great changes in GP income and income loss for many GPs and through their representative organisations the GPs were able to extract a concession. They received a "Minimum Practice Income Guarantee" MPIG , which temporarily protected the previous income levels of those who would otherwise have lost out - that guarantee being withdrawn over time by a combination of inflation and the clawback of pay rises. At the same time the Government introduced the Quality and Outcomes Framework QOF which was designed to give GPs the incentive to do more work and fulfil government-set requirements indicators to earn points varying amounts per indicator which translate into greater income. Participation in the QOF is voluntary but since the standards change each year, practically all practices participating have to do more work each year for the same income. However, the substantial additional workload of QOF has led to substantial improvements in the screening for

risk factors in the community by primary care, particularly for older patients with cardiovascular disease. The inevitable consequences of systematic underfunding of primary care OOH services and their provision by the cheapest bidder came to a head with the Dr Ubani case , although there have been many others. It should perhaps stand as a warning of the risks inherent in the "lowest bid cheapest provider" model of medical care. A series of amendments have followed each year - each time reducing income for the current workload, and tying existing pay to new targets adding new QoF indicators, making them harder to meet, extending working hours. Practices have to help anyone who wants it to sign up for patient-facing services. This means that two practices with the same number of patients may have very different weighted patient numbers due to widely varying patient characteristics and health conditions, and as a result, these practices which may seem to be similar in terms of list size, could receive very different levels of funding". The main use of this contract is to give GPs the option of being salaried. The study found the introduction of the alternative contract had not led to improvements in quality and may have resulted in worse care.
