*I'm a (not yet passing) trans woman who walks through Manchester City Centre at the time. It is perfectly safe. I think I've had someone obviously laugh at me twice in the last year, but nothing more serious.*

Staff was nice and polite. Staff extremmelly helpful and nice! Everything is very closeby foot: Majoros, Romania The personnel is very helpful, speaks fluent english. The rooms are clean, quite large, with good facilities. Stefan, Romania The receptionist was really helpful. Came in the middle of the night in short notice and they were very pleasant and helpful. Lior, Israel The staff was really really nice and gave us great indications. The location was very good. Dcribeiro, Portugal Eventough the entrance to the hotel is a bit creepy, the location is perfect! Right in the middle of the city. Elifcan, Turkey The hotel has an excellent location, right on square Trg Republike in the center of Belgrade. It is located on the 4th and 5th floor of the building heading towards the square Trg Republike. The location is in the city center, accessible by short walk. The rooms were spacious and comfortable. In the room there were double bed, working desk, safe, mini bar. The room was air conditioned and equipped for different weather conditions. The bathroom was spacious with a shower cabin. It was equipped with towels, toilet paper and other toiletries. There was hair dryer in it. The room was cleaned every day and the towels and toiletries were managed every second day. Sanja, Macedonia Location location location!

### 3: Safe Routes Info

*International Development Research Centre Government of Canada Panel discussion on data, women, and girls. Towards Safe and Inclusive Cities.*

Children deserve safe places to walk and bike – starting with the trip to school. By starting with children and the trip to school, communities become safe places for everyone to walk and bike. We provide ways for communities to get started and offer the best information available to make the future they envision a reality. We recognize the value of having a chance to try something new – like walking to school! Our work uses research-based evidence to highlight what works and why, and we translate this research into education, professional development tools and training to provide communities the technical support they need to make community-enhancing decisions. These events are used to encourage families to celebrate the benefits of walking and biking and to increase local leader commitment and visibility for traffic safety and community quality of life. Each year these events break records for participation. Most event coordinators report that their events led to changes to policies or the physical environment – the kinds of changes needed to support safe walking and biking every day, not just for special events. Visit the Walk and Bike to School website to learn more, register an event, or see schools that are already participating. We launched the Vision Zero for Youth initiative, which builds on how cities and communities across the USA are taking a bold lead in setting ambitious goals to eliminate traffic fatalities and serious injuries and calling it Vision Zero. A growing group of these cities focus on improving safe walking and bicycling in school zones and other places where youth are present. Starting with youth also can be the spark that creates community support for a broader Vision Zero program. The Vision Zero for Youth initiative encourages communities and their elected officials to focus safety improvements and efforts to slow traffic speeds where children and youth travel. Find out more about Vision Zero for Youth and see a menu of actions for addressing the issues that a community may be facing. Safe Routes to School Safe Routes to School programs aim to make it safer for students to walk and bike to school and encourage more walking and biking where safety is not a barrier. Traditionally underserved communities deserve particular attention, in part because they tend to have more pedestrian and bicyclist injuries. Data collection is critical to the planning, implementation and evaluation of programs. From 2007 to 2011, the National Center developed resources, provided technical assistance, and conducted marketing and program evaluation for the Federal Safe Routes to School program. Research and Evaluation In 2012, the National Center developed a centralized data collection and reporting system to understand and evaluate the uptake of the Federal SRTS Program and look for changes in walking and bicycling participation. From 2013 to 2015, the National Center provided data processing services to all schools that collected school travel data using its instruments. This provided the opportunity to create a nationally standardized means of benchmarking and evaluating SRTS practice and resulted in trend reports and analysis of program reach. Tools and Training As part of support for the Federal SRTS Program, the National Center developed a menu of online and in-person training and technical assistance options with the purposes of building consensus, identifying issues and solutions, supporting equity and prioritizing needs. The National Center trained more than 1,000 instructors who taught the SRTS National Course across the country with the goal of bringing stakeholders together and providing quality information and tools to use to make decisions about the future of their communities. A peer exchange program enabled state leaders to connect with others with similar issues or solutions. A tool developed with the Institute of Transportation Engineers enabled communities to prioritize locations for safety infrastructure improvements. Today the National Center is focusing on the development of training and tools to increase local capacity. Our goal is to share with local elected officials how communities are realizing the health and safety benefits of making walking and bicycling safe, appealing options and to hear how communities are making it happen. Use of the data system is free and available to any school. The system will generate summary reports to make it easy to share findings with community stakeholders and others interested in understanding walking and biking rates for students. The National Center is applying what we have learned during our ten years of serving as the clearinghouse as we broaden our initiatives. This experience informs the

thinking behind our framework for advancing the larger goals of Vision Zero.

### 4: Central Florida Hurricane Center - Since

*- such as clean and safe public toilets for women, well-lit streets, proper pavements -that becomes acute in the areas inhabited by the poor, is an Shilpa Phadke, 'Dangerous Liaisons.*

Email In many ways, the community of Zabeel in the eastern part of Dubai, can be considered the heart of the city, as it is adjacent to vital road links that connect it to crucial business, commercial and residential hubs such as DIFC, Dubai World Trade Centre, Dubai Mall and Sheikh Zayed Road. Once complete, it will feature luxury hospitality and residential elements, along with grade A office space and a high-end retail podium. Mace is overseeing the entire operation as project manager. Construction on the project started in late , with work progressing rapidly once ALEC was appointed to the project, starting with a 28m excavation completed in September that year. At the time of visiting the site in July , the tower cores were both at Level Two, while basement levels B7, B6, B5 and B4 had been constructed. The massive cantilever “ known as The Linx “ will be suspended m above the ground. The entire structure will rise up from a three-level podium and seven basement levels. The view from the project is great as well. With the bridge cutting through the land area, the design team were forced to get creative to come up with a design that would incorporate it. What can we create that would complement the other iconic buildings in Dubai? The two towers, The Linx and the bridge in between “ this is how we started. Then we engaged a number of international architects, we created a competition and then we reviewed the different ideas they had. As such, it was decided very early on in the design process to put the residential tower on the far side of the bridge, closer to Zabeel Park. This was a conscious decision, keeping in mind the safety of the younger residents of the tower, he explains, as there will be a pedestrian bridge connecting the residential tower to the park, creating a safe avenue for residents and their children to cross over. We created the bridge that will link from the residential tower area, so that residents can get to the park and enjoy that area. The offices will be housed in the section of the tower below The Linx, while the hospitality section will run to the upper floors of the tower, though the highest levels will be reserved for the new headquarters, Galadari says. Like the residences, the office tower will also have a bridge providing easy access to the Dubai World Trade Centre. They are one of the best contracting companies in Dubai. You can feel the quality of work even as you drive up to the site offices, with the area being so clean. If this is the site office, just imagine what the project is going to be like. These include just-in-time, off-site prefabrication, consolidation centres, staging zones and pre-cut materials, which all helped to reduce the known hoist cycle time. Given the scale of the project, coordinating operations on-site was also a challenge, with ALEC having to coordinate each trade, starting with a Logistic Welcome Pack issued at the kick-off meeting. With this pack setting out the site protocols, the contractor was able embed processes early, allowing its project team to carry out daily coordination programmes with each trade contractor. We believe strongly in partnership, and that any project you start is an adventure, and that a strong partnership between all parties is crucial. If the contractor has any issues, he brings it to us and we discuss it with the project managers and the architects and designers, including our own ones. This is because there is only one site perimeter road. We are in the trenches with them and we work with them. We attend a lot of those meetings with the RTA and the municipality to understand [what the issues are]. It is a very challenging development, and nobody has done an excavation like this “ seven levels below and adjacent to a live bridge. At present, the current workforce is 3,, but at peak that number will grow to 10, Managing these numbers will be quite the task for the contractor, but it says there are plans in place to ensure the smooth flow of personnel on and off the project. The movement of men will be carried out by 10 construction hoists and three jump lifts capable of moving 5, men in two hours, the contractor explains to Big Project ME. This streamlined approach to delivery and installation of materials will help speed up operations on-site. We make sure that the safety of people on-site is the number one focus for us “ they are the ones that should be at the top of the agenda for any company. This aids production by removing the risk of falls and falling materials. In addition, 10 tower cranes are being used currently on the project, including a Favco MD with an operational capacity of t, four t mobile cranes and one 50t mobile crane. Additionally, eight concrete pumps were used to

cast the 16,m3 of concrete for the foundation of Tower A, which was completed in 72 hours, the contractor says. ALEC is one of the best contracting companies, and we have discussed this with them. We have a LEED consultant working with us, looking at all the small items in development, helping us make sure we achieve that certification. It is part of the hospitality offering, special venues will be there, signature restaurants will be there.

**5: How safe is it going from Cairo Airport to the City???? - Cairo Forum - TripAdvisor**

*The RAP supports a shift towards a new urban paradigm that recognizes the city as a macro-level public good, where the economic, social, cultural and environmental rights of all are guaranteed.*

Are my children treated fairly by peers, teachers and school administrators? Do I sometimes feel that I am exploited by people in authority because it is assumed that I do not know Canadian Law or my rights as a citizen? Do I witness or am I subjected to rude and offensive remarks and behaviors, aggressive or intimidating body language, or being ignored? Maps of problem areas, design solutions, questionnaire results are presented in an attractive and easy-to-understand manner. Adaptation of the Safety Audit The safety audit tool has been changed over time to suit the needs of different groups of women and different contexts. In some cases, the language has been made simpler. In other cases, examples and procedures have been tailored to be more compatible with realities in rural areas. In other cases still, completely new audit guides have been made for specific spaces – such as university campuses. Some groups, such as Jagori in India, have used map-making skills to map the characteristics of unsafe spaces Jagori, These recommendations include, for example: A heavy focus on physical environmental changes, such as improved street lighting and visibility Toronto in A focus on socio-economic considerations, such as the creation of safer living spaces for women, an increased focus on health, and job creation in Dar el Salaam, Tanzania Mtani, For increased public transit in Paris, France Lieber, Remember that women and girls are the best sources of information on when and where they feel safe. It is very important to obtain information from women and girls about what factors make them feel insecure. This information may differ based on different experiences, so it is important to consult a variety of different women. To overcome this challenge, allow women and girls to take the lead and communicate in whatever ways make them feel most comfortable. Using a variety of communication tactics can be useful. Different tactics can include holding interviews or focus groups, conducting surveys, making art about insecure experiences, and so on. Focus Group Discussions, Rosario, Argentina Focus group discussions were held over the course of two months to better understand the distinct forms of violence that women experience in cities. The aim of these discussions was to assess different perspectives on violence in general, and specifically on violence experienced by women. Discussions focused on the following themes related to violence against women in the city: Different methodologies were used to introduce the themes in each focus group. Specifically, themes were introduced to participants through written statements, questionnaires, pictures photos of the city, drawings illustrating violent situations, etc. Focus group participants reflected on their personal day-to-day experiences in their own neighbourhoods and in the city to identify dangerous places. Participants also explained why they perceived these places as being dangerous. For more information on holding safe and accessible meetings for women and girls, see the Mobilizing Communities to create Safe Cities and Communities for Women and Girls section in Main Strategies for Safe Cities and Communities. The group of women think about, write down, and discuss how their daily routines are constrained by insecurity, using concrete examples. Available in English and French. Focus Group Guide Handling the day-to-day problems of informal workers n. The tool provides information on the kinds of problems informal workers face, including problems relating to gender and safety. Then recommendations are provided on how to work with informal workers in a five-step process: Hear the Story 2. Analyse the Situation 3. Probe More Deeply 4. Find Out More 5. Decide What to Do. Real-life examples are provided for illustration. It includes background information, indicators, and methodologies for diagnosing safety issues for women and girls. Available in English , Portuguese and Spanish. What Works and Where? Survey results provide further evaluation information on the successes and challenges of different aspects and adaptations of the tool. The report is available in English. A Focus on Essential Services Available in French and English. Crossing Barriers, Breaking Divides: Madanpur Khadar, Delhi This publication, created by Jagori, documents the process of conducting safety audits with youths both boys and girls in a resettlement colony. The process and results of this project are described with a focus on mapping and training; critical sensitization of key stakeholders, and youth capacity-building. Results are disaggregated by gender. This publication also provides

a guide for conducting a safety audit with youths in a resettlement area. Training material for neighbours to conduct participatory baseline assessments of their neighbourhoods so as to improve their habitability and social ties Rodigou, M. Women and Community Safety: Cowichan Women Against Violence Society. Available for purchase in English. Cowichan Valley Safer Futures Program.
