

## 1: Postgraduate Research | School of Public Health and Community Medicine

*Engaging and down to earth, this book will appeal both to supervisors and to research students who want to make the most of their postgraduate study in Australia. Lively examples come from many disciplines: computer science, health, education, politics, psychology, and science.*

James Smith School of Humanities, Discipline of History Alexander Cohen Award Performing a study of medieval intellectual history, namely the symbolism of water in medieval thought. Stephan Karl School of Physics, Biophysics Research Group BankWest Award Developing a highly sensitive, quantitative and cost-effective method to detect malaria-transmitting cells in human blood. Santiram Chatterjee Centre for Offshore Foundation Systems Performing numerical modeling of pipeline seabed interactions. Evelyne Deplazes School of Biomedical, Biomolecular and Chemical Sciences Investigating the structure and function of mechanosensitive ion channels using spectroscopy and simulations. Edward Fysh School of Medicine and Pharmacology Improving treatments for patients with malignant pleural effusions. Nilimesh Halder School of Computer Science and Software Engineering Evaluating public health containment strategies for control, prevention and surveillance of infectious diseases using an individual-based simulation model. Tristan Kewe Performing semiologic analysis of geographical markers in popular songs as representation of national identity. Shannan Maisey School of Biomedical, Biomolecular and Chemical Sciences Studying indoor reactive chemistry through computer modeling using the MCM protocol adapted by inputs from field study observations. Margaret Mohring Visiting California to learn state-of-the-art techniques for studying the reproductive ecology of kelps. Gabrielle Reid School of Primary, Aboriginal and Rural Health Care Developing and validating a family history screening instrument to support chronic disease prevention in primary care. Joeline Bizzantino School of Paediatrics and Child Health Investigating the immunogenetics of asthma exacerbations in children. Gemma Cadby Identifying prognostic features of melanoma in the Western Australian melanoma health study. James Dunne School of Sport Science, Exercise and Health Using computational modelling to estimate muscle forces and joint loads to predict risk of injury. David Erceg-Hurn Investigating the effects of advertising prescription antidepressant medications direct to the public. Marcal Gusmao Identifying adaptation mechanisms of grass peas to water-deficit conditions. Kamel Hammani School of Biomedical and Chemical Sciences Investigating the role of pentatricoptide repeat proteins in organelle gene expression in plants. Amy Lampard Investigating the psychological factors that maintain eating disorders. Marcus Lee School of Sport Science, Exercise and Health Creating realistic 3-dimensional visual environments for accurate assessments of how visual cueing affects movement patterns and knee injury risk. Karina Price School of Medicine and Pharmacology Investigating the role of micro-RNAs in the progression and metastatic spread of colorectal cancer, using both cell-like and human tissue models. Kathryn Ramsey School of Paediatrics and Child Health Investigating the link between early life exposure to arsenic via drinking water and non-malignant lung disease.

## 2: Scholarships to study in Australia

*Doing Postgraduate Research in Australia [Kate Stevens, Christine Asmar] on www.enganchecubano.com \*FREE\* shipping on qualifying offers. Engaging and down to earth, this book will appeal both to supervisors and to research students who want to make the most of their postgraduate study in Australia.*

These are sometimes placed in a further hierarchy, starting with degrees such as the Master of Arts from Latin Magister artium; M. Professional degrees such as the Master of Architecture degree M. Professional degrees such as the Master of Business Administration degree M. These are often further divided into academic and professional doctorates. The Doctor of Science degree can also be awarded in specific fields, such as a Doctor of Science in Mathematics degree from Latin Doctor scientiarum mathematic arum; D. In some parts of Europe, doctorates are divided into the Doctor of Philosophy degree or "junior doctorate", and the "higher doctorates" such as the Doctor of Science degree, which is generally awarded to highly distinguished professors. A doctorate is the terminal degree in most fields. In the United States, there is little distinction between a Doctor of Philosophy degree and a Doctor of Science degree. Credits required are about half of those required for a doctoral degree. In the second half of the 19th century, however, US universities began to follow the European model by awarding doctorates, and this practice spread to the UK. These are awarded to a wide variety of people, such as artists, musicians, writers, politicians, businesspeople, etc. Recipients of such degrees do not normally use the associated titles or letters, such as "Dr". Non-degree qualifications[ edit ] Postgraduate education can involve studying for qualifications such as postgraduate certificates and postgraduate diplomas. They are sometimes used as steps on the route to a degree, as part of the training for a specific career, or as a qualification in an area of study too narrow to warrant a full degree course. Admission[ edit ] In Argentina, the admission to a Postgraduate program at an Argentine University requires the full completion of any undergraduate course, called in Argentina "carrera de grado" v. Licenciado , Ingeniero or Lawyer degree. Funding[ edit ] While a significant portion of postgraduate students finance their tuition and living costs with teaching or research work at private and state-run institutions, international institutions, such as the Fulbright Program and the Organization of American States OAS , have been known to grant full scholarships for tuition with apportions for housing. This Committee should be composed of examiners external to the program, and at least one of them should also be external to the institution. Please help improve this article by adding citations to reliable sources. Unsourced material may be challenged and removed. April Types of postgraduate degrees[ edit ] Programmes are divided into coursework-based and research-based degrees. Research degrees generally consist of either Masters or Doctorate programs. In some disciplines it is acceptable to go straight from the undergraduate degree into a Ph. Doctorate programs may lead to the award of a Ph. Litt is a higher research degree for exemplary achievement. Admission[ edit ] Generally, the Australian higher education system [23] follows that of its British counterpart with some notable exceptions. Entrance is decided by merit, entrance to coursework-based programmes is usually not as strict; most universities usually require a "Credit" average as entry to their taught programmes in a field related to their previous undergraduate. On average, however, a strong "Credit" or "Distinction" average is the norm for accepted students. Not all coursework programs require the student to already possess the relevant undergraduate degree, they are intended as "conversion" or professional qualification programs, and merely any relevant undergraduate degree with good grades is required. Entry requirements depend on the subject studied and the individual university. The minimum duration of a Ph. Most of the confusion with Australian postgraduate programmes occurs with the research-based programmes, particularly scientific programmes. Research degrees generally require candidates to have a minimum of a second-class four-year honours undergraduate degree to be considered for admission to a Ph. In science, a British first class honours 3 years is not equivalent to an Australian first class honours 1 year research postgraduate programme that requires a completed undergraduate pass degree with a high grade-point average. There has been some debate over the acceptance of a three-year honours degree as in the case of graduates from British universities as the equivalent entry requirement to graduate research programmes M. Hons are the letters gained for postgraduate

research honours at the University of Queensland. Hons does not indicate that this honours are postgraduate qualification. The difficulty also arises between different universities in Australia—some universities have followed the UK system. There has also been some confusion over the conversion of the different marking schemes between British, US, and Australian systems for the purpose of assessment for entry to graduate programmes. The Australian grades are divided into four categories: High Distinction, Distinction, Credit, and Pass though many institutions have idiosyncratic grading systems. Assessment and evaluation based on the Australian system is not equivalent to British or US schemes because of the "low-marking" scheme used by Australian universities. Funding[ edit ] The Australian government usually offer full funding fees and a monthly stipend to its citizens and permanent residents who are pursuing research-based higher degrees. There are also highly competitive scholarships for international candidates who intend to pursue research-based programmes. Some universities require eight taught modules for a one-year programme, twelve modules for a one-and-a-half-year programme, and twelve taught modules plus a thesis or dissertation for a two-year programme. The academic year for an Australian postgraduate programme is typically two semesters eight months of study. Requirements for research-based programmes vary among universities. Generally, however, a student is not required to take taught modules as part of their candidacy. It is now common that first-year Ph. In such cases, an alternative degree will be awarded for their previous work, usually an M. Generally, in order to be accepted, the candidate must have above average grades and it is highly recommended to be initiated on scientific research through government programs on undergraduate areas, as a complement to usual coursework. Funding[ edit ] The competition for public universities is very large, as they are the most prestigious and respected universities in Brazil. Funding, similar to wages, is available but is usually granted by public agencies linked to the university in question i. Degree requirements[ edit ] There are two types of postgraduate ; *lato sensu* Latin for "in broad sense" , which generally means a specialization course in one area of study, mostly addressed to professional practice, and *stricto sensu* Latin for "in narrow sense" , which means a Master of Science or Doctorate , encompassing broader and profound activities of scientific research.

### 3: Research degrees (MPhil, MRes & PhD) in Australia and New Zealand | Study Options

*The first handbook to provide practical suggestions and assistance for current and intending postgraduate students and their supervisors. It provides ideas for managing time and structuring the different stages of the research degree with a view to developing a marketable graduate.*

University of Adelaide employees enjoy a range of benefits and favourable work conditions that include opportunities for career development and advancement. Pure Mathematics received the top ranking of 5 in ERA , make it one of the premier departments in the country. It hosts the Institute for Geometry and its Applications, <http://www.maths.adelaide.edu.au/>. Research topics include but are not limited to: Index theory of elliptic operators; geometric analysis, positive scalar curvature; mathematical gauge theory; mathematics of String Theory; mathematics of condensed matter physics. Equivalent international qualifications will be considered. Domestic applicants should apply for admission via the Domestic online application form. Please email a summary of your application for admission to Elder Professor Mathai with "Application for advances in Index Theory PhD Scholarship" in the subject heading. You can request a copy of your application summary by emailing [scholarships@adelaide.edu.au](mailto:scholarships@adelaide.edu.au). International applicants should apply for admission via the International online application form. If you have any queries regarding this position, please contact Elder Professor Mathai Varghese. This position will be open until filled. The scholarships are made available through an agreement between The University and the Vietnamese Ministry of Education and Training. The relevant Masters degree for Doctor of Philosophy applicants and the Bachelors degree for Master of Philosophy applicants must be in the fields of science, technology engineering, computer science or maths unless otherwise agreed between the parties. Interested students should contact the Australian Desk of Vietnam International Education Development for more information. This innovative doctoral training programme aims to address key issues associated with agricultural sciences and with innovation in the food and beverage industries. Students are co-supervised by staff at both universities and undertake a minimum period of research of one year at each institution. Both campuses are renowned for their world-leading research in agricultural, food and beverage sciences, and their outstanding facilities for research and teaching. PhD graduates obtain jointly awarded degrees from the University of Adelaide and the University of Nottingham. The studentship will cover PhD tuition fees, plus a stipend corresponding to the standard research council rates of both countries. The following project is currently available: Development and evaluation of alien introgression lines of wheat. At Nottingham, the focus will be on wide crossing and molecular cytogenetics. At Adelaide, the focus will be on molecular genetic analysis of the introgression lines and on the use of the materials in molecular breeding. This project is suitable for a student with an excellent background in genetics. All students should have, or expect to obtain, a first-class or good 2: Send your cv and unofficial transcripts to Diane Mather [DMather@adelaide.edu.au](mailto:DMather@adelaide.edu.au).

The process of applying for a PhD or a masters by research in Australia and New Zealand is very different to that of applying for a taught coursework programme. There are two options for applying for research programmes PhD or a Masters by Research at a university in either Australia or New Zealand. You can search the database of available projects by following the link below. Applying independently You will need to establish contact with a potential academic supervisor and get provisional approval for your research proposal. This will mean identifying the institutions and academics working in the area that you intend to research, and making direct contact with relevant individuals to discuss your work. When you approach academic members of staff, we recommend you communicate your research ideas in a concise but well thought through manner – academic staff receive a lot of similar requests and are only likely to respond positively to ones that demonstrate commitment and ability. Your research proposal does not need to be finished, or even particularly detailed, but it does need to contain enough information to allow the university to decide whether or not your proposed research is something that they have the resources to supervise and interest in hosting. Study Options can advise you on which universities have expertise in the field that you want to research. We can also assist with locating relevant departments and with contacting academic staff. If you would like our help with this, please email us a detailed copy of your research proposal and your CV. Please along with any criteria or preferences that you have for example, any university or location preferences, or particular fieldwork or facility requirements. Once you have provisional support for your application from an individual academic or from a university department please contact Study Options so that we can assist with the formal admissions process. Research applications submitted via Study Options are fast tracked through university assessment procedures and are exempt from application fees. Funding for research students Most universities concentrate their international student scholarships on research students so there are usually several options available. There are also general scholarships available for research students in both Australia and New Zealand. The Costs And Practicalities section of this site contains information about financing your study in Australia or New Zealand and where to look for scholarships. Please note that international PhD students in New Zealand are only required to local tuition fees, rather than full international tuition fee rates. This is a New Zealand Government policy, designed to attract talented researchers to the country. Finding a supervisor Establishing contact with a potential supervisor can be a time-consuming and often frustrating process, but it is extremely important and worth investing both time and effort in. PhD applications, in particular, are often assessed by a committee of academics – your supervisor is the person who can champion your application through this and other Faculty processes. They are also often great sources of information regarding scholarships and funding and may well be able to tell you about scholarship options that other people within the University are not widely aware of. As a start point, please look at the university profiles here to begin working out which universities you might like to consider approaching with your research proposal. Many Australian and New Zealand universities provide a facility on their website that enables students to search for suitable supervisors among their research staff. These search functions are all available from the individual university guideline pages, below. Once you have established contact with a potential supervisor, the team at Study Options can help you fully with your application forms, document certification and visa applications – please contact us for free assistance when you are ready. If you do not nominate Study Options during your application we cannot provide any of the free support services listed above. If you have any questions about Study Options and how we work with you on your application, please contact us to discuss. University-specific guidelines All universities have individual, slightly different, application procedures for research applications.

Internship[ edit ] Internship is a period of mandatory supervised general clinical experience. It allows medical graduates to consolidate and apply clinical knowledge and skills while taking increasing responsibility for the provision of safe, high quality patient care. Diagnostic skills, communication skills, management skills, including therapeutic and procedural skills, and professionalism are developed under appropriate supervision. Internship also informs career choices for many graduates by providing experience in different medical specialities including general practice, and providing a grounding for subsequent vocational specialist training. It defines the supervised intern provisional registration year training requirements that must be completed in order for graduates of Australian and New Zealand medical programs accredited by the Australian Medical Council and approved by the Medical Board of Australia to be eligible for general registration. Whereby, general registration indicates that the practitioner has the skills, knowledge and experience to work as a safe entry level medical practitioner able to practise within the limits of their training. Interns are required to complete three core terms in medicine, surgery and emergency care and other non-core rotations make up the balance of the intern year providing opportunities to explore additional areas of medicine and surgery, anaesthesia, psychiatry, paediatrics and less acute care such as rehabilitation medicine, palliative care, geriatrics and general practice. In , there were state-funded intern positions and Commonwealth funded intern positions. With the increasing number of medical graduates, there have been concerns about the number of available internships. The Australian Medical Student Association provides a yearly Internship Guide to help guide medical graduates in their application process, as well as providing general information about the different State and Territory Health systems and clinical opportunities available at the various hospitals. In contrast to medical education following the United States system, internship and residency in Australia are considered pre-vocational terms where doctors have yet to formally commence their training in a specific speciality. Clinical rotations and terms are at the preference of the resident and dependent on the availability of the health service ; there are no mandatory terms to fulfill; for example, if the resident has aspirations to pursue enrolment in surgical speciality training, they would preference and request more rotations in the various surgical specialties for instance, Neurosurgery, Cardiothoracic, or Urology , versus if the resident had interests to pursue emergency medicine, he would probably benefit from further rotations in the various critical care specialties that is, ICU, ED, or Anesthetics. After completing internship and one or more additional years as a resident and meeting the pre-requisites for the relevant speciality college, doctors can apply for admission to a recognised medical speciality training program. This is the necessary training to obtain fellowship of one of the recognised specialist medical colleges, and allows a doctor to practice medicine independently and unsupervised in that relevant speciality field, and with this access to an unrestricted Medicare provider number and Medical Board specialist registration. Nowadays, most colleges require applicants to have previous clinical supervisors submit referee reports, and fulfil a number of criteria in their curriculum vitae which typically involve scoring the candidate in four domains: Demonstrated clinical experience at the level of a resident or unaccredited registrar relevant to the speciality applied for Academic excellence in addition to the basic medical degree including research publications and higher educational degrees Pre-requisite completion of recommended workshops or courses, and if any, entrance examinations or assessments Extra-curricular activities and merits that demonstrate a well-rounded individual [14] Applicants with satisfactory CV are invited to partake in interviews or assessments that typically assess adequate medical knowledge to commence speciality training and explore psycho-socially if the candidate is suitable for the speciality. In order to qualify for election to fellowship and specialist recognition, most specialist colleges have clinical, practical and exit exams, in conjunction with other assessments to assess the full range of skills and behaviours required as a doctor, such as communication and team work. Specialist training programs and examinations are administered by the individual colleges and vary between three and seven full-time years to

complete, depending upon the speciality you choose. Part-time training is available to most specialities, and dual-speciality-training is optional and streamlined for some specialities. Vocational training for most medical specialities is undertaken in a public teaching hospital, however it increasingly includes rotations in private hospitals, regional, rural and community health settings. The exception is general practice, where doctors undertake most of their training in designated private general practices in a community setting. That said, some colleges help allocate employment and allocation to various training sites and hospitals to streamline the traineeship and employment obligations, whereas some colleges leave this entirely to the discretion of the trainee. Medical Specialist Colleges of Australia [17] Organisation.

### 6: Kulbardi Postgraduate Research Scholarship in Australia - World Scholarship Forum

, *Doing postgraduate research in Australia / Kate Stevens and Christine Asmar Melbourne University Press Carlton, Vic*  
*Wikipedia Citation Please see Wikipedia's template documentation for further citation fields that may be required.*

Around 20 per cent of bachelor degree graduates immediately go on to further study either part- or full-time and many others do so at some point later in their careers. Of those enrolled in study in over 27 per cent were in some form of postgraduate study nearly 5 per cent in a research qualification, up from 16 per cent in DEEWR Selected Higher Education Statistics. However, the number of people between 15 and 64 who have postgraduate qualifications nationwide is only 6. Types of postgraduate study

Want to undertake postgraduate study but daunted by the array of courses and confusing terminology? You are not alone. The different qualification levels available can be confusing if you are not familiar with standard postgraduate concepts and structures.

**Honours** Some Australian universities offer an honours year as part of an undergraduate qualification. But it is generally considered a postgraduate year because a bachelor degree can be completed without it. To be eligible for honours, students need a high grade point average GPA for their core undergraduate years. An honours year contains both a research project and a course work component. In some disciplines, such as Science or Humanities, honours is considered a stepping stone toward a research career.

**Coursework** A Graduate Certificate Grad Cert can be completed with a three-year bachelor degree under your belt and usually takes one semester full-time two semesters part-time. A relevant undergraduate degree is often required, however appropriate work experience can sometimes count. Often it can be continued on from the Grad Cert and requires similar prerequisites.

**Masters by Coursework** is similar to the Grad Cert and Dip, and requires a relevant undergraduate qualification or some form of relevant work experience. A masters usually takes 18 months to complete full time. The structure of each qualification varies according to the discipline.

**The Professional Doctorate** is considered a coursework qualification; it endows the title of Doctor and has an equivalent education level to a PhD. Where a PhD is most often an avenue to a career in academia, the professional doctorate caters for those wishing to pursue non-academia based careers though not exclusively so.

**Research Masters by Research** is completed wholly on the basis of a research project. The student is paired with a supervisor whose interests align with the project. The thesis is examined on completion usually two years full-time and the degree conferred.

**Doctorate by research or PhD** Doctor of Philosophy is the highest degree that a university confers. It is similar to the masters by research, with a thesis submitted to examiners who determine whether the research work generally carried out over four years is worthy of the qualification. PhD candidates must, through their theses, demonstrate that they have made some original contribution to their fields. Once graduated, the candidate may use the title of Doctor.

Making the decision Individuals choose to undertake postgraduate study at all stages of life, not necessarily directly following an undergraduate degree. Many graduates revise their career goals after a few years of work experience, which often leads to further study. People undertake further study for a range of reasons, including:

- Whatever your reasons for considering postgraduate study it is important to consider: Employers fill vacancies based on a range of criteria, one of which may or may not be a postgraduate qualification.
- Financial costs and rewards. Costs Regardless of how you intend to pay for your postgraduate qualification, look at the return on your investment. Also take into account the loss of income if you have to give up work or move into a part-time role. At the same time, most postgraduate courses significantly enhance employability. Research indicates that typical salaries for postgraduates are substantially higher than for bachelor graduates. However, postgraduates are generally older and have more work experience, and the impact of postgraduate study is difficult to measure. Many universities provide scholarships to candidates who meet certain criteria, such as low income or of an Indigenous background. Other available financial support options include: Specific scholarships available for postgraduate research students who show potential. Some postgraduate students now have access to income support through Austudy. The CRC Program brings together researchers and research users, and emphasises the importance of collaborative research. It is worth investigating what CRCs exist that relate to your discipline area and whether any are connected to your university of choice. If

you are already in some form of employment and your future study needs are directly beneficial to your current employer, it can be worthwhile approaching your organisation to ask for some form of assistance. Data from Graduate Careers Australia indicates that around 37 per cent of postgraduate students who worked in their final year of study gained some form of study-related financial assistance from their employer, while around 63 per cent also gained time off to assist their studies Postgraduate Destinations , GCA. Similar to the HECS scheme for undergraduate study. An authoritative and comprehensive guide to postgraduate and professional funding. Making the most of postgraduate study support structures Most Australian universities have a range of services to support both undergraduate and postgraduate students, such as postgraduate centres, health services and study workshops. Some campuses have dedicated support services for postgraduate students, usually provided by independent postgraduate student associations. Many career services at Australian universities are becoming aware of the needs of postgraduate students and have dedicated counsellors who specialise in this area. Utilising your university careers service can ensure you make the most of your study and strategically plan where it is taking you, rather than waiting until completing your course to think about your career options. Time management By undertaking further study you will have added another task to what may already be a busy life, so planning how to use your time productively is important. Plan ahead and make sure you set aside time to: Whatever your goal for your future, further study is a unique opportunity to expand your horizons and grow as a person. Top tips Be clear about your reasons for undertaking further study and the financial and lifestyle implications. Research how your study may impact your future employability and career options. Investigate different modes of study part-time, distance and what level of qualification suits your needs. Investigate all available options to fund both your fees and your living expenses while studying. If choosing a research degree, do your homework on the institution and your research supervisor to make sure they meet your needs. Find out about all university support services available. Which ones will you engage with during your time as a student? Develop a rough plan of skills you hope to develop during your study. When choosing to undertake a particular qualification speak with your institution to ensure that it meets your personal and professional needs. There is a huge variety of postgraduate courses available. The type and range of postgraduate options within a given discipline are influenced by the history and nature of the area of study, student demand, workforce trends, skills shortages and the state of the economy. Below are postgraduate study snapshots of the most common disciplines. The independence and initiative this generates is essential for leading an academic research team, and is highly regarded in industry. However, the choice to pursue a masters also enhances the educational achievements of my CV and should prove beneficial in the widespread search for employment.
