

1: Security System Control Panel - PC | DSC MAXSYS Security Products | DSC

About Us. DSC (Digital Security Controls) is a world leader in electronic security. Since the company's genesis, the experts at DSC have been leading the way.

Page 4 Section 5: Testing and Maintenance Performing a Walk Test Fire Safety Fire Alarm Operation The LCD keypad will guide you through each operation with English language prompts. The keypad provides audible feedback each time a key is pressed; with unique audible sequences, it will also signal system troubles and other indications of system status. General System Operation Section 1: General System Operation 1. The control panel will be mounted out of the way in a utility room or basement. Alternate Arming Methods For Multi-Partition Access Codes When a multi-partition access code is entered, you must tell the system which partitions you wish to arm. The system will only offer to arm the partitions for which your code is programmed. Once you have entered your code, the display will read: Disarming Your System Section General System Operation Stay Arming This feature, if enabled, will allow you to arm the perimeter zones while leaving some interior zones inactive so that you can remain on the premises while the system is armed. Alarm Memory Disarming Another Partition If you have a multi-partition access code, you can disarm other partitions before entering them. To disarm another partition, enter your access code. The keypad display will read: Remember that only partitions to which your access code is assigned will be displayed. Viewing Trouble Conditions 1. If one of these conditions occurs, the keypad Trouble light will turn on and a beeping sound will be heard every 10 seconds. Press the [] key to silence the keypad. The Trouble light will stay on until the trouble is cleared. Access Codes Section 2: Access Codes Access codes are used to arm and disarm the system as well as to access system functions. There are many different codes available on the system. The Grand System Master Code will be able to perform all system functions. Page 14 Program Code You will need to program a four-digit code for each user. Six-digit access codes are also available. Talk to your installer if you require six-digit access codes on your system. To program the code for the new access code, perform the following: The first letter of the access code name using the corresponding number key. The keypad will display the first available name starting with the selected letter. This is for entering uncommon characters. For a list of the other user options that are enabled for this code, see Table System Administration Section 3: To exit the menu, press []. Activating Door Chime 4. Once the date and time have been programmed, press [] twice to return the partition to its normal disarmed state. Pc-link Enable Option 3. If the module is disconnected from your system for any reason, after it is reconnected, you must select the PC-LINK enable option. Access Control Section 4: Talk to your installer for information regarding the access control capabilities of your system. Programming Access Cards pc Modules 4. An access card is assigned to a single user of the system. A user can have both an access code and an access card to provide two different means of accessing the system. Page 27 Section Access Control Your installer will customize access levels to suit your purposes. Assigning access level 00 means that the user will never have access to a given area. You may also search by access card number. To do so, perform the following: Testing And Maintenance Section 5: Test your system on a weekly basis and have any system trouble conditions corrected by your installer or service technician. Fire Safety Section 6: Fire Bells Sound Upon a fire alarm, the bells or sirens will sound. They will pulse on and off in a programmed pattern. The keypad will display the following: First Fire Alarm [Zone Label] The display will indicate the first fire zone in alarm, followed by any Do not locate smoke detectors at the top of peaked or gabled ceilings; the dead air space in these locations may prevent the unit from detecting smoke. Household Fire Safety Audit 6. To minimize this danger, a household fire safety audit should be conducted and a fire escape plan should be developed and practised. Are all electrical appliances and outlets in a safe condition? Check for frayed cords, overloaded lighting circuits, etc. Do not investigate or attempt to fight the fire, and do not gather belongings or pets as this wastes valuable time.
