

1: Three steps to discovering and encouraging your child's strengths and talents - Too Darn Happy

Encouraging Your Child's Science Talent: The Involved Parents' Guide Michael Matthews provides parents with advice for recognizing early science ability in children and enriching a child's science ability outside of school.

Check new design of our homepage! AptParenting Staff Last Updated: Mar 26, The more that you read, the more things you will know. Seuss STEM science, technology, engineering and math fields have been making the news lately, especially in regards to education. Kids are born curious and creative, which are the two most important traits of workers in these fields. Mention these things to your child. Then explain the correct reason, and maybe look up a clip on YouTube. When shopping, ask your kid to calculate the change you expect to get back. Teach him to fry an egg, and ask him why the white turns from clear to white, and then take the opportunity to explain the denaturation of proteins. Think ahead and look up the information ahead of time, so you have an answer at hand. I was never good at math either. As long as you pass. Being uncomfortable with math is the result of poor past experiences or a poor foundation. Gather Study Aids Sometimes, no matter how smart, dedicated, and capable both you and your child are, you may still struggle with certain subjects or concepts. Look for study aids, tutors, and opportunities for extra help. Also ask about after-school study sessions or school-sponsored tutoring. Seek out programs that foster an interest in STEM outside school hours. Look at environmental outreach programs at a local park, space camps, summer internships at local labs, and events at the local science museum. There are loads of opportunities out there, especially at the high school level. Even if your child ends up pursuing a different career path, growing up in a STEM-friendly home will give him a sense of how to think critically, observe, and gather facts. He will instinctively question the world around him, and learn to form conclusions based on facts.

2: Really Awesome Ways to Encourage Your Child's Interest in STEM

Encouraging Your Child's Science Talent can be read in parts or from cover to cover. Each chapter is valuable in its own right, and adds to the effectiveness of the book as a whole. Each chapter is valuable in its own right, and adds to the effectiveness of the book as a whole.

I have a confession to make. I was a mom who concentrated on the weaknesses. What can you do to bring that up? I would look at the just cleaned bedroom, maybe give lip service to the bed that got made, but gesture towards a still cluttered closet, and take my girls to task for an unfinished job. I cringe just writing that. And ask my daughters for forgiveness. Now that I am much older and wiser, I know better. I offer what I have learned to you so that you can be a loving and effective parent who focuses on helping to reveal the strengths while building lasting relationships with your children. Today I am sharing three ways to start bringing out the best in your youngster. What they were wired to be, not what you want them to be. Let go You need to give up your preconceptions about who and what you think they need to become a professional athlete, a female executive, a doctor, a missionary, etc and start focusing on how you can help them figure out what it is they are really passionate about. While you may dream of continuing the unbroken family lineage of engineers, teachers, farmers, mechanics, nurses, or whatever, this may not be where your child will be working in their strengths. Folks who work in their strengths zone, as Tom Rath writes in Strengths Finder 2. Pay attention Watch them closely to identify what trips their trigger. Keep track of concrete examples of things they are innately good at and accomplishments in their lives, and record them in a journal. For instance, they may be natural born leaders. If this talent is not playing out in a positive way in their lives at the moment, you have an opportunity to redirect and then document it. They may possess talents that make them natural tinkerers, organizers, helpers, inventors, artists, musicians, problem solvers, for example. Remember-no entry is too small to recognize. Note that this last is important, especially if they did not get the part. They took a risk, and that is really important to recognize. If you think your children are just too young to make any of this information valuable Rath writes in Finder: This is one of the reasons why StrengthsFinder measures the elements of your personality that are less likely to change-your talents. Remember what you are seeking is the intersection of their passion and their talents, as it is in this place that the sparks fly. Encourage them Provide and support activities that engage these interests. Create or find opportunities for your helper to help, for your foodie to cook, for your server to serve. Find local organizations or museums that have programs of particular interest to your kids so they can visit and participate, or locate adults with whom they can chat with who have similar talents and are using them at work or in a hobby. You can always enroll your kids in programs, but please be mindful of them becoming an over-scheduled child. Yes, affirm and cheerlead them indeed. It is a delightful, and yes, sometimes tremendously difficult journey to walk alongside your children and to guide them on their way to adulthood, to provide love and support, and to be the parent, and later the friend. The greatest gift you can give your children is not your riches, but revealing to them their own.

3: Encouraging your child's science talent : the involved parents' guide (Book,) [www.enganchecubano.com]

Parents of children with precocious science ability will find the suggestions in Encouraging Your Child's Science Talent engaging, encouraging, and practical advice. The author provides parents with advice for recognizing early science ability in children, ways to help that ability flourish at home and in the classroom, setting up science.

The next American president? And what he found is that parents have been sold an incorrect picture as to how genius happens. How kids practice, how they deal with failure, how they get praised, and how they are criticized, all play a part in the likelihood of achieving greatness. Want to create your own hotbed at home? Watch for tiny, powerful moments of ignition. New research is showing us that when it comes to motivation, we are all born with the neurological equivalent of hair triggers. Coyle points to a study done with a set of young musicians in which young musicians who foresaw themselves as adult musicians learned percent faster than kids who did not. Understand that all practice is not created equalâ€”not by a long shot. The talent hotbeds have long known a crucial fact that science is just discovering: Kids who are able to see errors as fuel for learning, rather than setbacks, are the ones that eventually become geniuses. Recognize that slow practice is productive practice. This technique is common to virtually every talent hotbed, from tennis to cello to math. The reason it works: When we praise effort, however, kids become more inclined to take risks, make mistakes, and learn from themâ€”the essence of deep practice and learning. Copying is a neurological shortcut to skill. The kind of deep practice that grows skill circuits can only come from within the kid, not from the parent, no matter how well-meaning. As Stanford psychologist Carol Dweck puts it, all parental advice can be distilled into two essential points: In other words, notice when they fall in love, and help them to use the energy of that love wisely. When you start thinking about talent as a processâ€”when you see the power of certain forms of practice, when you look for inner passion, when you tune into the teaching signals you can sendâ€”life changes, Coyle says. Like most big changes, it shows itself in small ways. A concept that works better with skiing than it will with learning to drive a car. Mostly, though, teaching kids that talent is built, not born, allows them to look at failure in a completely new way. Without them, greatness is not possible.

[Click here for additional information.](#) What Art Can Do for Your Kids Lori Garcia Before my kids were able to fully express themselves through words, they were little artists creating images as bold and unique as they were. While all his classmates had drawn charming stick families with giant, endearing smiles for an Open House display, mine created a small forest of trees. Soon, drawing became everything. He drew during meals, car rides, shopping trips, and bedtime. Notebook upon notebook filled with the creative thoughts and ideas of a boy who saw a world of forgotten possibility. He lit up creating and describing his images. He was an artist of more than pretty pictures “ he was an artist of possibility and imagination. I suppose it came as little surprise when my youngest followed a similar artistic path. Together, my boys joined forces to create memories and masterpieces. They turned scribbles into fireworks in the night sky, transformed wrinkled papers into textured mediums and accidental tears into objects of deliberate expression. They created together and they created apart, but they mostly created because their imaginations were too big not to. After an accidental discovery of her artistic talents at age 5, her passion and determination led her to become a respected young artist within the art community. Take a look at her incredible story: What my sons and I noticed most about Autumn was her undeniable passion “ a light that shined so bright, her spirit possessed each work of art she created. The problem is how to remain an artist once we grow up. As masters of potentiality and accidental artistic radicals, creative kids serve as a testament of organic soul expression. When it comes to encouraging the creative talents of our children, there are five simple things parents can do to make a powerful difference. Be on the lookout. Every child is a natural creative born with talents and passions. Museums, exhibits, festivals, and free public events are also a wonderful way to encourage artistic growth and development. Compliment them, showcase their work, and express pride in their determination and personal commitment. Following personal passions and expressing creative interests sends a powerful message about the joy that comes from personal discovery. Article Posted 4 years Ago Share this article.

5: 50 Ways to Bring Out Your Child's Best | Thomas Armstrong, Ph.D.

A guide for parents of scientifically motivated children that discusses recognizing science ability and helping it develop, setting up projects at home, encouraging science investigation outside of the school, and creating a science fair project.

And what he found is that parents have been sold an incorrect picture as to how genius happens. How kids practice, how they deal with failure, how they get praised and how they are criticized all play a part in the likelihood of achieving greatness. A distinctive and powerful pattern helps parents unlock the neurophysiology of learning. Watch for tiny, powerful moments of ignition. New research is showing us that when it comes to motivation, we are all born with the neurological equivalent of hair triggers. Coyle points to a study done with a set of young musicians in which kids who foresaw themselves as adult musicians learned percent faster than kids who did not. Understand that all practice is not created equalâ€”not by a long shot. The talent hotbeds have long known a crucial fact that science is just discovering: Kids who are able to see errors as fuel for learning, rather than setbacks, are the ones who eventually become geniuses. Recognize that slow practice is productive practice. This technique is common to virtually every talent hotbed, from tennis to cello to math. The reason it works: When you go slow, you can sense and fix more errors, coaching yourself to build a better skill circuit. When we praise effort, however, kids become more inclined to take risks, make mistakes and learn from themâ€”the essence of deep practice and learning. Copying is a neurological shortcut to skill. The kind of deep practice that grows skill circuits can only come from within the kid, not from the parent, no matter how well-meaning. As Stanford psychologist Carol Dweck puts it, all parental advice can be distilled into two essential points: In other words, notice when they fall in love, and help them to use the energy of that love wisely. When you start thinking about talent as a processâ€”when you see the power of certain forms of practice, when you look for inner passion, when you tune into the teaching signals you can sendâ€”life changes, Coyle says. Like most big changes, it shows itself in small ways. A concept that works better with skiing than it will with learning to drive a car. Teaching kids that talent is built, not born, allows them to look at failure in a completely new way. And mistakes are not something to be embarrassed about. Without them, greatness is not possible.

6: Encouraging Your Child's Science Talent: The Involved Parents' Guide

The PDF Encouraging Your Child's Science Talent: The Involved Parents' Guide (The Involved Parents' Guides) ePub book is available in PDF, Kindle, Ebook, ePub, and mobi formats Which you can now store on your device and you can carry it anywhere easily.

Richard loved to tinker with mechanical devices. As a 6-year-old, he took apart an alarm clock. At 9, he helped his dad fix the lawn mower. In high school, he spent hours tearing apart and rebuilding stereo equipment. These are certainly important, but there may be hundreds of other ways for children to show their gifts. As an anonymous observer once said: Let your child discover her own interests. Pay attention the activities she chooses. This free-time play can say a lot about where her gifts lie. Expose your child to a broad spectrum of experiences. They may activate latent talents. Give your child permission to make mistakes. Help your child open up to the wonders of the world by asking intriguing questions: Why is the sky blue? Find the answers together. Plan special family projects. Shared creativity can awaken and develop new talents. If children are sent to special lessons every day in the hope of developing their gifts, they may become too stressed or exhausted to shine. But make them realistic. Share your work life. Expose your child to images of success by taking him to work. Let him see you engaged in meaningful activities and allow him to become involved. Provide a sensory-rich environment. Have materials around the home that will stimulate the senses: Keep your own passion for learning alive. Your child will be influenced by your example. Play games together as a family. Have a regular family time for reading, listening to music, talking. Have reference materials available to give your child access to the world. Allow your child to participate in community activities that interest her. Use humor, jokes, silly stories to encourage creativity. He may give up on his talents if he feels evaluated. Play with your child to show your own sense of playfulness. Share your successes as a family. Talk about good things that happened during the day to enhance self-esteem. Provide your child with access to a home, school or public library computer. Listen to your child. The things he cares about most may provide clues to his special talents. Give your child a special space at home to be creative. Visit new places as a family. Give your child open-ended playthings. Toys like blocks and puppets encourage imaginative play. Give your child unstructured time to simply daydream and wonder. Share inspirational stories of people who succeeded in life. Using incentives to get children to perform sends a message that learning is not rewarding in its own right. Suggest that your child join peer groups that focus on her gifts. Discuss the news to spark interests. Expose your child to both feminine and masculine toys and activities. Avoid comparing your child to others. Help your child compare himself to his own past performance. Be an authoritative parent. Use community events and institutions to activate interests. Take trips to the library, museums, concerts, plays. Encourage your child to think about her future. Support her visions without directing her into any specific field. Introduce your child to interesting and capable people. Think of your home as a learning place. The kitchen is great for teaching math and science through cooking. Encourage your child to read. Do things with your child in his areas of interest. Teach your child to trust her intuition and believe in her capabilities. Give your child choices. It builds willpower and fuels initiative. Show your child how to use books to further an interest. Set aside an area of the house for displaying creations and awards. Encourage your child to tackle areas that are difficult for him. Help him learn to confront any limitations. Help her find outlets for her talents. Accept your child as he or she is.
