This book is an authoritative, concise reference, prepared by authors from 28 countries. It contains more than 1,000 color photographs, numerous MRIs, ultrasound images, CT scans, charts and approximately 10,000 references. Diagnostic criteria, pathological features and associated genetic alterations are described in a strictly disease-oriented manner. Sections on all recognized neoplasms and their variants include new ICD-O codes, incidence, age and sex distribution, location, clinical signs and symptoms, pathology, genetics and predictive factors. Based on a vast number of cases seen at the Armed Forces Institute of Pathology and the Mayo Clinic, this volume is a comprehensive reference on the radiologic evaluation of soft tissue tumors. The book covers the entire spectrum of soft tissue pathologies, with over 1,000 images showing common and atypical appearances. The authors discuss the relative utility of all imaging modalities in assessing each lesion. This edition features expanded coverage of masses that mimic tumors, more illustrations of each lesion, and information on recently described tumors. Coverage of each lesion begins with boxed summaries of key clinical and radiologic points and charts showing anatomic locations and patient demographics. This richly illustrated revised second edition provides a comprehensive survey of the growing role of medical imaging studies in the detection, staging, grading, tissue characterization, and post-treatment follow-up of soft tissue tumors. For each tumor group, imaging findings are correlated with clinical, epidemiologic, and histologic data. The relative merits and indications of various imaging modalities are discussed and compared. Particular emphasis is placed on MRI. The updated edition includes new chapters on soft tissue lymphoma, soft tissue tumors in the pediatric patient and biopsy of soft tissue tumors. It aims to serve both as a systematic, descriptive textbook and as a rich pictorial database of soft tissue masses.
