

1: The World of M.C. Escher - Eric T Moore Books

Maurits Cornelis Escher, usually referred to as M.C. Escher, was a Dutch graphic artist. He is known for his often mathematically inspired woodcuts, lithographs and mezzotints. He is known for his often mathematically inspired woodcuts, lithographs and mezzotints.

Each essay is to be regarded as a stand-alone piece, with comparisons between the two genres generally made afterwards. Music is another field replete with his work, with about distinct covers an exact figure is trying to determine, for reasons of which I discuss below. Furthermore, it is also interesting to compare the favoured choices between the different cover art mediums. Another notable aid was the discs. Note that on occasions, it is not always possible to present the findings in an ideal way as possible, given that this is wholly an internet search; I do not have a single music instance of Escher artwork in my collection of Escher material. There are varieties of complications that militate against a straightforward listing. Names of the recording and group are not always clear-cut. Dates of issue are sometimes not given. Some albums appear to have been re-released, other are bootlegs. Other avenues for confusion are minor variations of covers. Although indeed strictly of three different instances, to regard these as three different covers is to give a false impression, and so such instances, for analysis purposes, are regarded as just one. Another aspect of confusion is that of bootlegs. In particular, Pink Floyd has many examples. What is or is not original material is not always clear. Some have artwork on both front and reverse, and inside. Likely, the listing here is more or less complete, at least for English and US covers. An open question is that of foreign instances, of which I am on less certain ground. Despite thorough searches, very few new instances arose, and so I conjecture that the list, at least for English and US references is more or less complete. Certainly, there may well be other instances, but this would involve relatively few, for the sake of a number ten or so perhaps even much less. Simply stated, the number of recordings pales significantly as when compared to books, and so there is simply more opportunity for book covers by sheer weight of numbers. I am at the whim of search engines or more exactly Google; Bing and Yahoo are next to no use in these matters. It must remain doubtful whether a complete list of every Escher artwork ever used will be feasible, although possibly records are kept with the Escher foundation as regards permissions. I would not be in the least surprised if there would be a few more upon a more exhaustive search. Indeed, I have largely confined my search to English language covers; likely foreign instances will be just as popular. Speculating as regards foreign instances is fraught with difficulty, perhaps there may well yet remain much more. As ever, an open invite to readers – are you aware of any Escher cover artwork not featured here? If so, I would like to know of it. Do feel free to contribute any new instances. Upon the initial chronological listing, one can then sift for different aspects. This was in , with Scaffold beating Mott The Hoople by a few months [2]. Such a late attribution seems surprising late in this context the first in a book was ten years earlier, in ; does anyone know of an earlier instance? Escher himself twice turned this down. If permitted, this would have apparently been the first music cover, being of January of that year, predating Scaffold, Mott the Hoople and The Youngbloods of the same year. If permitted this would have apparently been the first music cover, being of January of that year. Second, there is also a Beatles connection, although here a little more tenuous, and does not concern The Beatles directly. Steven Heller in Eyemagazine [3] quotes: There was at least one more influence: Escher and desperately wanted his work for the Beatles book. So he flew to Holland and met him at his house in Baarn; he bought a couple of prints intended for the book, but left them on the train. Minus Escher, the Beatles book came out in with a first printing of 1,000 copies. What a pity he left the prints on the train! Of interest is that, with very few exceptions, none of the bands listed here are household names. Certainly, most people will be familiar with Mott the Hoople, Pink Floyd and The Scaffold, at least of a certain age, but this was from way back, in the 60s and 70s. On a personal note, this essay and latterly investigation has long been in gestation, indeed, ever since , when I saw an article by C. Broos in The World of M. This features eight instances of Escher cover art pp. Does anyone have contact details of Broos? Is he still alive? It would be most interesting to contact him on these matters. Indeed, the Broos mention rather than a strict listing , in appears to be the first of what can be called a listing of sorts, or perhaps better

described as an illustration, with three covers, p. P and The Mandrake Memorial. Such listings, surprisingly, appear to be at a premium. Another, essentially oblique reference is in Holland Herald, of p. Amazing Images, of c. Quite simply, there is nothing like it on the web. That by Snellius is also comprehensive, albeit not as complete as Shieh. Aside from this, I am unaware of other listings of any note, formal or otherwise. Does anyone know of others? The World of M. Abradale Press, , pp. First published in Eye No. In Holland Herald, Vol.

2: ESCHER, MAURITS C - Books on recreational and popular mathematics, etc

C.H.A. Broos is the author of Kunst En Kunstbedrijf (avg rating, 0 ratings, 0 reviews, published), Scientific Examination of Early Netherlandish.

For a long time, I have many unanswered questions in tessellation-related matters concerning people, of which this concerns their works or of the person themselves. I would dearly like to track these people down some now possibly deceased, or can anyone tell me what became of them and hear their story. Below I show the person I am interested in, with the point of interest in brackets and the query. James came to prominence as the discoverer of a type 10 pentagon in Did he continue his studies and his work on pentagons? Is there a picture of him? Are you there, Richard? Rolf Stein Pentagon Tilings Rolf Stein is another pentagon discoverer, a type 14 in, of which next to nothing is known. Again, did he continue his studies and his work on pentagons? Are you there, Rolf? It would be nice to know from him as to how this article arose. Many questions remain, such as was Escher contacted preceding this, and if so what was his opinion. Upon looking for him, it is evident that he is still alive, and indeed active, at the age of 71, but his contact details remain elusive. His associate of the time, and also likely in connection with the article, Michael Moorcock, is also still with us, but he too remains elusive. Are you there, Charles and Michael? Teeters, of Michigan, USA, seemed to flourish in the mids being disappearing into obscurity. What became of him? Are you there, Joseph? I asked the Japanese Tessellation Association for any details about him, but he was unknown to them. Are you there, Michio? He may even still be alive. Maths, science, computing and music specialist with side interests in dancing, font design, Celtic knotwork etc Upon being suitably impressed by his work to follow up, I enquired of him on that site, to which he was somewhat obscure, in two mails, saying: Are you there, Sef? Stevens Tessellations Does anyone know what became of Peter S. Among his publications, in particular, was Handbook of Regular Patterns, this featuring some of his Escher-like tessellation artwork. Seemingly little is known of him, beyond details on the flyleaf on another of his books, Patterns in Nature: Stevens is an architect who has specialized in acoustics and in the development of prototype designs for underwater structures. He is also a painter and photographer. Did he continue his work in tessellation? Are you there, Peter? What gave her the idea? Have the preliminary drawings and history somehow survived? Her husband was the son of was a notable architect, H. Cluster Puzzles Art Nugent died in, although it appears his son, N. There is much I would like to know about Art. Are you there, N. Despite extensive searches, I have not been able to find any. Her place in cluster puzzle history is most significant, being one of the early forerunners, with many questions arising thereof. Have the preliminary drawing survived in the family archives? Are you there, the descendants of Elspeth? Possibly they may have some more detail on this historical artefact, believed to be the first unambiguous example of a cluster puzzle, and so of the utmost importance in a historical sense. Are you there, Jane and Bill? I contacted Luck, but he could add little to what was already known. Are you there, Philip? Croton used as a framework for his puzzles the Cairo tiling, not once but twice, and so given the early date for its appearance is thus of more interest than of latter-day concerns. I tried contacting The Listener authorities for further details, of which although I received a reply they were unable to tell me who he or she was. Are you there, Croton? Broos Escher Tessellations Does anyone know what became of C. Broos, ex-curator of Modern Art, Municipal Museum, The Hague, Netherlands, and seemingly a Dutch author of at least five books to his name, art historian and commentator? Of particular interest is an insightful essay he wrote in The World of M. I would like to ask him on this. He seems to have flourished in the s, but nothing of him has been heard since. Possibly he has died. Further, oddly, only the initials of his name are known! Are you there, C. She seems to have flourished in the s, but nothing of her has been heard since. There are seemingly no other publications. Possibly she has died. Are you there, Josephine Mold? Hill rose to semi fame in as a result of sending in an elegant solution to a geometrical dissection puzzle, of a Maltese Cross to a square, proposed by the puzzle authority and dissection expert Henry Ernest Dudeney. However, Dudeney did not give any further details of him, and for now, nothing is known of him. Greg Frederickson, also an authority on geometrical dissections, made some speculations as to who he may have been, but the matter has still to be resolved: Does anyone

know of the mysterious Mr A. Travers is of interest as regards his connection to the puzzlist Henry Ernest Dudeney, of whom he posthumously edited two of his puzzle books *A Puzzle-Mine* and *Puzzles and Curious Problems*. Seemingly little is known about Travers. Travers is also known in the field of geometric dissection, of which he erroneously and outrageously? The story is told in Greg Frederickson [2], p. Of interest is his interaction with Dudeney. He subsequently borrowed three books from Alice Dudeney and later bought more, but which these are is not seemingly known. On the web, he is essentially anonymous. Are you there, any descendants of his seven children? *A Lewes Diary* Cambridge University Press This is a splendidly researched article, with much detail not previously known. I would like to ask her more. However, she appears to delight in anonymity. No background detail in fashion? However, from her picture, she is obviously quite young. Are you there, Priscilla? Created 28 October Updates: Jane and Bill Leach 20 December. Richardson entry notably revised 22 December. Broos 22 September, Josephine Mold 2 November
