EVENT MANAGEMENT SYSTEM PROJECT pdf

1: Event management - Wikipedia

Online Event Management System Download Project Document/Synopsis This is an Online event management system software project that serves the functionality of an event manager.

You want to make sure everything is in place, which is not a simple process when doing it manually yourself. There are many conference management tools that can save you time and keep things organized. Before truly committing, it is recommended that you explore and compare a variety of popular event and conference management softwares to find the best one that meets your needs. Be clear about what you need: Web or mobile brochure? Or also for attendee engagement? Understand different strengths of event management software. Are they more like all-in-one solutions or specialized for a particular task? Eventbrite It is a popular ticketing solution for all kinds of events ranging from small meetups to large concerts. The system is customizable and allows people to register from their phones. You can use it to send email confirmations and reminders. They charge an extra 2. While Eventbrite is well known, some organizers think the fee is a bit high. Popular for smaller events or entertainment events. A bit pricey compared to other registration software or all-in-one event planning tools. It is time consuming and pricey to juggle multiple pieces of software. Whova all-in-one event management software enables you to seamlessly manage your event from beginning to end within one system. Take a look at how it would help on registration , attendee engagement through the Whova event app , event website creation and agenda management , attendee check-in , name badge generation , and more. An affordable, mobile-friendly, all-in-one event management platform. Whova won multiple Event Technology Awards in and The Whova app is the 1st event app pioneering attendee networking and engagement functionality. It has the highest ratings in app stores among all event planning apps. Whova offers customers many time-saving event management tools for free. Request more information here. The Whova event planning software was a great organizational and communication tool for our meeting participants. The app allowed us to engage each other throughout the event, kept our event paperless and provided us with great memories through the photo sharing. We look forward to using Whova for future conference management. Cvent Cvent has been in the event market for many years and it provides software and services for event management such as venue sourcing, housing, traveling, online registration, etc. Their venue search option is useful, but it is limited to hotels. It is more suitable for high-end, large events due to its price. Similar to other traditional brand, its strength may not be in offering modern mobile technology. Trello It is a project management software. It has a strong visual interface, simple usability, and collaboration features. A good tool to track progress of each task. While it can be used as an event software, it is a bit hard to see the entire project status for event or conference management. Social tables Social Tables simplifies seating charts management, room layout design, and guest check-in. You can also collaborate with caterers, venue providers, and fellow organizers through the system. For business conferences, if you look for a check-in tool rather than a seating charts management tool, first check whether your online registration system or conference management software has a check-in feature in it. Event planning software especially for seating chart creation and guest check-in for social events like weddings. DoubleDutch DoubleDutch is one of the well-known event planning apps especially for high-end, large events such as enterprise events and tradeshows. With their development team, you can build your own app with complex custom features as well as back-end integration. Good for high-end trade-shows that need customized feature development and back-end CRM integration. Attendee engagement and networking features are not their strength. Everwall There are many platforms that help you collect and display tweets about your event on a big screen in real time. One of the first social media walls, Everwall formerly Tweetwall gets posts on displays quickly and also provide extensive moderation, customization, and advertising options. If you already use Hootsuite to manage social media, it would make more sense to use Hootfeed. Social media wall that displays live tweets on a big screen. Also check out advanced ones that can automatically pull a live feed from your event management app. WordPress Theme WordPress is a popular content management system used by over 80 million websites and fully customizable thanks to many themes and plugins. You can find WordPress themes for conference and event management

and build your own event websites. However, you may experience a steep learning curve if you are not familiar with WordPress. Most of all, you have to manually update event contents such as conference agenda and speaker information over and over, which is tedious and error-prone. A general website builder. Content management part is not specifically tailored for conferences, requiring you to manually update event information repeatedly. Check complementary solutions like the Agenda Center and Speaker Center. With recent event tech, you can create an event website in tens of minutes and let it auto-updated. Event Planning Checklist You may be looking for event software to ensure everything is well organized so that you can avoid mistakes. Here, armed with this event planning checklist, you can be even more confident when your event day approaches. This event planning checklist includes: Then, see what can be your best sidekick. Also, contact the vendors and request for a live demo. After all, the right tool could very well turn you into a rockstar event organizer.

2: Event Management System|online free project download

Event Management System In order to organize a event team work is important and work alloted to each team member managed using this software. Event organizer is an application under project management for creating and developing festivals, events, etc.

Marketing tool[edit] Event management might be a tool for strategic marketing and communication, used by companies of every size. Companies can benefit from promotional events as a way to communicate with current and potential customers. For instance, these advertising-focused events can occur as press conferences, promotional events, or product launches. Event managers may also use traditional news media in order to target their audience, hoping to generate media coverage which will reach thousands or millions of people. They can also invite their audience to their events and reach them at the actual event. This includes overall event design, brand building, marketing and communication strategy, audio-visual production, script writing, logistics, budgeting, negotiation, and client service. Event venue[edit] An event venue may be an onsite or offsite location. The event manager is usually not responsible for operations at rented event or entertainment venues, but will monitor all aspects of the event on site. Some of the tasks listed in the introduction may pass to the venue, but usually at a cost. Corporate event managers book event venues to host corporate meetings, conferences, networking events, trade shows, product launches, team building retreats or training sessions in a more tailored environment. Sustainability[edit] Sustainable event management also known as event greening is the process used to produce an event with particular concern for environmental, economic, and social issues. It involves including sustainable development principles and practices in all levels of event organization, and aims to ensure that an event is hosted responsibly. It represents the total package of interventions at an event, and needs to be done in an integrated manner. Event greening should start at the inception of the project, and should involve all the key role players, such as clients, organizers, venues, sub-contractors, and suppliers. Event mobile apps have a range of uses. They can be used to hold relatively static information such as the agenda, speaker biographies, and general FAQs. Mobile event apps can also be used by event organisers as a means of communication. Organisers can communicate with participants through the use of alerts, notifications, and push messages. They can also be used to collect feedback from the participants through the use of surveys in app. Going a step further, some mobile event apps can also help participants to engage with each other, with sponsors, and with the organisers with built-in networking functionality. Education[edit] There are an increasing number of universities which offer courses in event management, including diplomas and graduate degrees. In addition to these academic courses, there are many associations and societies that provide courses on the various aspects of the industry. Study includes organizational skills, technical knowledge, public relations , marketing , advertising , catering , logistics , decor , glamor identity, human relations, study of law and licenses, risk management, budgeting, and the study of allied industries like television, other media, and several other areas.

Event Management System Project Abstract: Existing System: In the existing system, there is a lot of pater work; it is very time consuming and uneconomical as most of the works include manual processing. The records are difficult to store in manual system, and it requires more manual labor work. Proposed System: In the proposed event management system, everything is web-based.

This project performs the task of developing a web application that enables the students and faculty to retrieve the data very easily. The main purpose of event management system is to provide a platform for the users to view the information about the events that took place in the past and the ones which are about to take place in the near future. The users can be faulty, students and administrator. They can first login into the website and see through the information such as details about the events like the venue, theme of the event , participants, chief guests ,etc. The faculty can keep the record of the attendance also. The administrator can login and update the information ,delete any unwanted data ,arrange the information accordingly so that the user can go through an user friendly and know all the whereabouts of their college. The scope of the project is just limited to a laptop or a pc with an internet connection. Firstly the user, whoever it may be student of faculty need to register to the website. After the registration process is completed each one of them gets a password and have their own user ids. With these two they can access their account and for any query they can contact the administrator by sending him a mail. Facility to schedule a meeting. In existing system there are lot of paper work and manual processing. While writing a paper records the management have to keep the records very carefully as the entire data is written in those books. Everything is paper based hence it is very time consuming. More than one person cannot access the data at same time. Lot of paper work required. Man power was more. System will allow student to fill the form online, system has inbuilt validation system to validate the entered data. After successful submission, system will give unique registration ID for each student. Student can login into system by using this registration ID and can give online feedback. System will generate the result instantly and store the results for further use. Improve management productivity, satisfaction and retention by Eliminate paper trails and manual process with complete online management for handling management for registration of events. Simply Event Management System with easy record management. Faculty can easily manage the attendance of the students who are participating in certain events. In the existing system lot of paper work was required and it was time consuming process. As it was manual process retrieving data was very difficult. More than one person cannot access the data. It helps program attendees, organizers, the authors and the reviewers in their respective activities. Development of Event management system is an attempt to address the problems of managing registration forms, feedback forms and evaluating feedback. The main goal of this software is to give working solution to store, manage and consolidate the registration data and the feedback data. EMS is web-based system for collecting registration forms and evaluating the feedback automatically. It increases the scope of the report generation even by generating report over a period of time. Typical functions supported by TMIS are: Registering students participants, Collecting feedback from students, Generating feedback reports.

Event Management System Document 1. A Project Summary On eTL Prepared By Ashish Mishra: Nitesh Mehta: Aakash Panchal: 2.

Briefly, an event is a change or update in the state of any configuration item or IT service. In this article, we will discuss the objectives, definitions, and types of events that are relevant to the Event Management Process. The 5 Objectives of the Event Management Process Identifying and determining corresponding control measures The first objective of the Event Management Process is identifying events and determining corresponding control measures. There can be several updates or changes in a service or configuration item. Some of these changes can be critical while some changes can be minor without impacting other aspects of the IT services. The categorization of these events and defining appropriate control measures for these different events is an objective of the Event Management Process. Programming events in such a way that operational information is transferred The second objective of the Event Management Process is that events can be programmed in such a way that operational information is transferred. For instance, logging into an application is an event or starting a service is an event from IT service management point of view. These actions indicate changes in a configuration item or in a service i. These are all operational information to manage the service operation in an IT Service Provider and the Event Management Process aims to program the flow and management of these kinds of operational information in an IT Service Provider. Forming the base of many routine activities in operations management Another objective of the Event Management Process forms the basis of many routine activities of Operation Management. Password change requests every three months is an example of a routine activity for instance. Some companies force employees to change their password every month while some companies force a password change three months etc. Password changes is a routine activity of operation management and these kinds of routine activities are formed by the Event Management Process. Providing the entry point for many process and activities of Service Operation The fourth objective of the Event Management Process is providing the entry point for many processes and activities of Service Operation. A problem, an issue or an indication in ITIL service management is the start point for investigation, monitoring and analyzing to find an appropriate solution for the event. Therefore, the Event Management Process is the entry point for many processes and activities of service operation. Providing a basis for service assurance, reporting and service improvement The fifth and the last objective of the Event Management Process is providing a basis for service assurance, reporting and service improvement. IT service providers aim for service improvement to improve the provided services consistently to increase the value provided to the customers. The Event Management Process helps to increase this value delivered to the customers. What is the difference between an alert and an event in the Event Management Process? Alert and Event are the concepts related to the Event Management Process. Alerts An alert is a warning that a threshold has been reached, something has changed, or a failure has occurred that is managed in the Event Management Process. For instance, a disk of a server might have reached its full capacity, or an application might have gone down, or a user might have entered his password incorrectly three times causing his account to become locked. These are all examples of alerts in the Event Management Process Alerts are often created and managed by System Management tools and are managed by the Event Management Process. To take immediate action for the alerts, system monitoring tools are used by IT service providers during the Event Management Process. These tools monitor the IT services and configuration items to check whether there are any alerts. These alerts are monitored by system administrators and proper actions are taken immediately before these turn into further problems in the service delivery. Events An event is a change of state that has significance for the management of a configuration item or IT service. An event covers any kind of minor and major changes in an IT Service provider and is managed by the Event Management Process. Failure of an application is an event and a wrong password entry of a user is an event as well. The term Event is also used to mean an alert or notification created by any IT Service, configuration item or monitoring tool in the Event Management Process. So, an alert is a type of an event. Events typically require IT Operations personnel to

take action and often lead to incidents being logged. For instance, we have given reaching full capacity in a disk as an example of alert and locking the account of a user after three incorrect login attempts as an example of an event. Both of these examples require the action of IT Operations personnel to take action. A disk that reached its full capacity must be emptied and locked user account must be fixed as well as part of the Event Management Process. Regular operations Regular, frequent and known activities in an IT Service provider are characterized as regular operations. These are managed in the Event Management Process. For instance, a user login to use an application is characterized as a regular operation. Similarly, a user logout from the system, using an application in the system, and using a service etc. Exceptions The second type of event that is managed in the Event Management Process is an exception. Exceptions refer to an unexpected pattern of an activity in an IT Service provider. For instance, if a user enters an incorrect password while attempting to log into an application or if a PC scan shows that unauthorized software is installed, these are examples of exceptions. We expect a user to log on an application correctly with the correct password or we expect that a PC runs without a virus. Therefore, these are examples of an exception event type. Unusual Operation The third and last type of event that is managed in the Event Management Process is unusual operation. Unusual operations refer to an unexpected situation but not an extreme operation. For instance, while monitoring an application server, it is noticed that there is a high level of CPU usage or the disk of the server fills in too fast. These are examples of unusual operations and the root cause of these unusual operations must be identified to fix to get back into usual and expected operation. Therefore, an unusual operation is a sign that the situation requires monitoring with greater precision. When a service is operational, the Event Management Process is an important process for keeping on top of any events or alerts which may influence the quality of the service.

EVENT MANAGEMENT SYSTEM PROJECT pdf

5: Online Event Management System

The main objective of the Event Management System is to manage the details of Event,Employee,Booking,Venue,Package. It manages all the information about Event, Enquiry, Package, Event.

It takes teamwork, a budget, a little bit of luck, and a whole lot of project management. Sounds just like an event to us! When project managers approach a project, they take very clear steps that can be borrowed and used in the event industry. However, leave it to project managers and event planners to make the complex simple. Identifying your project falls into four subsets: There are both tangible and intangible goals. Tangible goals are measurable, and intangible goals are immeasurable, but just as important. In many cases, the intangible goals you set will drive the tangible goals. Identify the project constraints â€" Constraints are boundaries that you and your team must operate within. In event planning, your constraints might include a small budget, a small venue, or a short planning phase. Resourceful project managers even view constraints as excuses to exercise creativity. Identify the team members and stakeholders â€" While your team and the event stakeholders may consist of different groups of people, more than likely, they will overlap a bit. Your team members are the individuals who are helping you put on a great event lighting, stage direction, marketing, etc. For example, internal stakeholders might include yourself, the marketing director, the stage manager, etc. On the other hand, external stakeholders will likely be sponsors, exhibitors, attendees, speakers, any organizations involved, etc. The purpose of identifying your team members is so that you understand your resources; the purpose of identifying your stakeholders is so that you know the decision-makers involved. Successful events assign a decision-maker or facilitator AKA stakeholder to each team who filters communication between other teams. Big, scary undertakings, like securing the venue, can be broken down into bite size tasks that seem much more manageable. When reviewing all that needs to be done, list out all your big tasks first, assign them their due dates see Step Two, below , and then break those big tasks out into the individual steps it takes to accomplish them. For example, when it comes to securing a venue, your individual steps might include research, in-person visits to a certain amount of venues, signing the contract on your chosen venue, and submitting the down payment. Set Deadlines and Milestones Deadlines and milestones are the same thing, right? Deadlines are the ultimate date that a task should be done by and are set in stone there is a caveat to this; keep reading and milestones are guidelines that you set along the way to measure success. For example, needing to pay the venue is a deadline, while setting a goal of having tickets sold by a certain date is a milestone. Before embarking on a new project, set the deadlines that the team will need to hit along the way. Start by identifying the deadlines that are beyond your control such as: Your event date THE ultimate deadline! These deadlines are what you and the internal stakeholders control, such as: These milestones might include: Sell tickets by x date Secure five sponsors by x date Since the effect of every great event should be felt beyond just one day or weekend, you may want to set deadlines for after the event, such as: Follow up with attendees via email by x date Upload photos from photographer to social media by x date To take it even further, you can set milestones that you hope to reach after the event these will likely tie into your goals: Some call these nice to have by and must have by deadlines. Soft deadlines and nice to have by deadlines create a nice, gentle landing for a task. Initial Communication Communication is important throughout the project, however, its especially important at the beginning of the project. Communication goes both ways. Keep the lines of communication open until your event, and beyond. Creating a communication plan will help you do so. Planned communication at regular intervals is a great way to keep everyone up to date. This can go top down, but also from the front-line up. Perhaps every Monday you send out an email with plans for the week, and every Friday you provide a report on where the team landed with those goals. Without a plan, communication can easily become sparse or even conjure up rapid fire email trains, which have the ability to create a toxic and stressful experience for all involved. While in-person meetings and communication may be preferable to digital communication, realize that not everyone needs to meet each week. Since your team members are divided into teams, empower the internal stakeholders to schedule their own team meetings, and then schedule regular meetings between the internal stakeholders to review decisions made, progress, and

communicate. When you do communicate digitally, we suggest considering these communication tools that are commonly used by project managers: Google Drive â€" A great way to collaborate on documents and share files. Google Hangout â€" This tool comes in handy when you need to have a meeting, but not everyone can physically make it. Google Hangout enables video conferencing as well as the live sharing of documents and notes. Quip â€" An alternative to Google Drive that involves not only multiple users editing documents simultaneously, but also includes to-do lists and spreadsheets. Involve your Team Despite sounding like a nature book, The Starfish and the Spider is a powerful book with a unique take on organizational and team structures. At the center of this is delegation and empowerment: Track your Progress Just like project managers do, the best event planners regularly track progress towards the event goals, and against the milestones and deadlines. In Step Number Two we reviewed deadlines and milestones. There are as many ways of tracking goals, deadlines, and milestones as there are event organizers. Some of the more popular digital project management tools include: Trello â€" A newer project management tool which has been spoken highly of Basecamp â€" One of the more well-known and popular project management tools Asana â€" Created by Facebook executives and originally only used to manage projects at Facebook Some popular non high-tech project management methods that can be carried out using post-its, markers and pens, or excel include: Exhibit Leadership and Confidence The most successful project managers are confident and are great leaders; the same can be said about event organizers. It may be tough to hear this but, not all event organizers are leaders. The one thing that separates these individuals from the rest is confidence. To spot leadership in yourself and others, here are some of the common characteristics found in great leaders:
