

1: Windows A complete list of changes and new features - ExtremeTech

You can quickly organize the data to best suit your needs using Excel's sort and filter features. When you sort information in a worksheet, you can quickly organize the data and find values quickly.

They just want to know what real and applicable solution you provide them. This might seem like common sense to you. Of course a business needs to connect their solution with the prospects pain points. However, failing to do so is a surprisingly common mistake. A FAB Statement is explaining the feature, what it does the advantage, and how that benefits the prospective client. Features are one of the easier things to identify. These are facts or characteristics about your business, products, and services. Advantages are what the features do. Benefits answer why someone should value the advantage. It connects the facts about your product to a solution for your client. This helps to retain body heat on cold nights. Can you see how this helps to connect your prospects desire to your product? The FAB Statements exercise will help you connect better with your prospective clients. And you know that means more business for you! Follow a few easy steps to start creating your own FAB Statements: Compile a list of your product features. Leave room to add your advantages and benefits later. Go back over your feature list and write in one or two advantages of each. Put yourself into your prospective clients shoes, and develop a benefit statement for each advantage. Be sure to dig right down to the core human desire. From here, you can put together a whole bunch of value statements. Flip the FAB Statements. Instead of stating the feature first, state the benefit. Then explain how you accomplish the benefit via your advantage and feature. For example, our final marketing message for our sleeping bag could actually be: Our 1 inch layer of insulation keeps your body warm all night so you sleep comfortably. This alone is a good reason to take a few moments and try this in your own business. You may just end up leaving your competition in the dust. Have you ever tried using FAB Statements? Do you even believe there is value in taking time to do this exercise? Share with us your own thoughts and experiences by leaving a comment below.

2: Can You Believe? Queer Eye Season 2 Drops Next Month | HuffPost

If you want to begin a relationship with God now, you can. This is your decision, no coercion here. But if you want to be forgiven by God and come into a relationship with him, you can do so right now by asking him to forgive you and come into your life.

The other two books were written by Mark and Luke, close associates of the apostles. These writers had direct access to the facts they were recording. At the time of their writing, there were still people alive who had heard Jesus speak, watched him heal people and perform miracles. Each of the gospels of Matthew, Mark, Luke and John, read like news reports, a factual accounting of the days events, each from their own perspective. The descriptions are unique to each writer, but the facts are in agreement. For a sample from one of the Gospels, click here. Sample of what is presented in one of the Gospels The Gospels are presented as matter-of-fact, "this is how it was. One typical example is the account in Luke, chapter 8, where Jesus brings a little girl back to life. Notice the details and clarity in its reporting: As Jesus was on his way, the crowds almost crushed him. And a woman was there who had been subject to bleeding for twelve years, but no one could heal her. She came up behind him and touched the edge of his cloak, and immediately her bleeding stopped. When they all denied it, Peter said, "Master, the people are crowding and pressing against you. In the presence of all the people, she told why she had touched him and how she had been instantly healed. Then he said to her, "Daughter, your faith has healed you. Meanwhile, all the people were wailing and mourning for her. But he took her by the hand and said, "My child, get up! Then Jesus told them to give her something to eat. Her parents were astonished, but he ordered them not to tell anyone what had happened. If it were fiction, there are portions of it that would have been written differently. And in writing fiction, would Jesus have ordered the parents to be quiet about it? You would expect the healing to make a grand point. People do react oddly. And Jesus had his own reasons for not wanting the parents to broadcast this. The best test of the Gospels authenticity is to read it for yourself. Does it read like a report of real events, or like fiction? If it is real, then God has revealed himself to us. Jesus came, lived, taught, inspired, and brought life to millions who read his words and life today. What Jesus stated in the gospels, many have found reliably true: Those living in the Jerusalem region were witnesses of Jesus and well aware of his ministry. If you would like to know more about Jesus, this article will give you a good summary of his life: How the books of the New Testament were determined. The early church accepted the New Testament books almost as soon as they were written. The other New Testament writers had immediate access to Jesus as well: James and Jude were half-brothers of Jesus who initially did not believe in him. Peter was one of the 12 apostles. Paul started out as a violent opponent of Christianity and a member of the religious ruling class, but he became an ardent follower of Jesus, convinced that Jesus rose from the dead. The reports in the New Testament books lined up with what thousands of eyewitnesses had seen for themselves. For example, the Gospel of Judas was written by the Gnostic sect, around A. The Gospel of Thomas, written around A. These and other Gnostic gospels conflicted with the known teachings of Jesus and the Old Testament, and often contained numerous historical and geographical errors. Soon after, Jerome and Augustine circulated this same list. These lists, however, were not necessary for the majority of Christians. By and large the whole church had recognized and used the same list of books since the first century after Christ. As the church grew beyond the Greek-speaking lands and needed to translate the Scriptures, and as splinter sects continued to pop up with their own competing holy books, it became more important to have a definitive list. Historians confirm what the Bible says about Jesus. Not only do we have well-preserved copies of the original manuscripts, we also have testimony from both Jewish and Roman historians. The gospels report that Jesus of Nazareth performed many miracles, was executed by the Romans, and rose from the dead. Christus [Christ], from whom the name had its origin, suffered the extreme penalty during the reign of Tiberius at the hands of one of our procurators, Pontius Pilatus From Josephus, "we learn that Jesus was a wise man who did surprising feats, taught many, won over followers from among Jews and Greeks, was believed to be the Messiah, was accused by the Jewish leaders, was condemned to be crucified by Pilate, and was considered to be resurrected. Even the Jewish Talmud, certainly not biased toward

Jesus, concurs about the major events of his life. From the Talmud, "we learn that Jesus was conceived out of wedlock, gathered disciples, made blasphemous claims about himself, and worked miracles, but these miracles are attributed to sorcery and not to God. Yet ancient historians Jews, Greeks and Romans confirm the major events that are presented in the New Testament, even though they were not believers themselves. Does it matter if Jesus really did and said what is in the Gospels? For faith to really be of any value, it must be based on facts, on reality. If you were taking a flight to London, you would probably have faith that the jet is fueled and mechanically reliable, the pilot trained, and no terrorists on board. Your faith, however, is not what gets you to London. Your faith is useful in that it got you on the plane. But what actually gets you to London is the integrity of the plane, pilot, etc. You could rely on your positive experience of past flights. But your positive experience would not be enough to get that plane to London. What matters is the object of your faith -- is it reliable? Is the New Testament an accurate, reliable presentation of Jesus? We can trust the New Testament because there is enormous factual support for it. This article touched on the following points: All of this gives a solid foundation for believing that what we read today is what the original writers wrote and experienced in real life, in real places. John, one of the writers sums it up well, "Now Jesus did many other signs in the presence of the disciples, which are not written in this book; but these are written so that you may believe that Jesus is the Christ, the Son of God, and that by believing you may have life in his name.

3: Does God Exist - Six Reasons to Believe that God is Really There - Is There a God

Queer Eye 's Jonathan Van Ness evokes his disbelief with world famous phrase "Can you believe?".

Computers The new features you need to know about in Windows 8. These tips and tricks will help you get started. Boot directly to the desktop in Windows 8. Critics blasted Microsoft for its dramatically redesigned user interface and removing the famous Start button. Concerns were eased when the company promised improvements in the next iteration of the operating system, now known as Windows 8. The latest version of Windows is slated to arrive as a free update for Windows 8 users later this week. Here are a few tips to get you started with Windows 8. To do this, click on the Desktop tile, right-click anywhere on the Windows 8. Next, check the box labeled "Go to the desktop instead of Start when I sign in," which can be found under the Start screen options. Clicking the button will bring you back to your last menu, while a right-click will reveal more traditional options. From here you can easily restart or power down the computer , access things like your programs, system settings, and Device Manager, along with the Task Manager, Control Panel, File Explorer, and Search and Run functions. This menu can also be accessed with a long press for computers with touch screens. Organizing the home screen Users previously only had two options when it came to the size of Live Tiles in Windows 8: This is no longer the case, though. A right-click, or long press, on a specific tile will give you the ability to unpin it from the screen, uninstall the program, resize it, or turn the Live Tile off. Live Tiles can be dragged and dropped as you please, while a right-click will give you the opportunity to name specific app groups. A complete list of installed apps can be accessed by either clicking the down arrow in the lower left-hand side of the screen, or by performing a swipe down on a touch screen. Selecting the up arrow or a swipe upward will bring you back to the home screen. Each corner of the screen has a different function; the Charms menu is in the lower and upper right, the back button is in the lower left, and the running apps window is in the upper right. Users were previously forced to look to third-party alternatives to disable this feature. I recommend disabling this feature if you are looking to work primarily in desktop mode. App updates A long overdue addition to Windows 8. This feature is enabled by default, but if you would like to disable it, simply enter the Store, go to the Charms menu, click on Settings, and select App updates. You can now set the same background for both your desktop and Start home screens. Go to the Charms menu, click on Settings, and select Personalize. Here you can change the background design and color; you will notice one of the options is the background you have on your desktop. This can be done by going to the Charms menu, selecting Settings, and clicking on the "Change PC settings" option.

4: Can You Believe This

CAN YOU BELIEVE THIS.. Features of the Pomegranate €¢ Fights Breast Cancer Studies in Israel show that pomegranate juice destroys breast cancer cells while leaving healthy cells alone.

A complete list of changes and new features Windows 8. A complete list of changes and new features By Ryan Whitwam on June 27, at 8: Many of the feature and UI changes rubbed consumers the wrong way, and now Redmond has announced a mea culpa of sorts with the Windows 8. This update fixes some of the annoyances, and adds some interesting new features. The Start button returns: One of the most confusing changes in Windows 8 was the removal of the Start menu. In fact, the Start button was completely gone, although there was an invisible clickable area where it used to be. Clicking on the button opens the Windows 8. You will have the option to boot directly to the desktop. More Lock screen and Start screen options: Microsoft already had picture passwords, but now that feature has been expanded to allow multiple images to be pulled from the local storage or SkyDrive galleries. This effectively makes the Lock screen into a digital photo frame. The Start screen now has more tile sizes and background colors, as well. One of the neat but under-appreciated features of Windows 8 is the Xbox Music integration. It allows users to stream over 30 million tracks for free. Previously it only found apps. Overall, the entire search and All Apps view experience has been significantly rejigged to help out mouse-and-keyboard users. Snap Views and better multi-monitor: The new Windows Store UI is cleaner and has larger images of the apps. Currently installed apps can also auto-update in the background. Hopefully this get developers more excited about making things for Windows 8. Perhaps the biggest and best change in Windows 8. Now, when you set up Windows 8. Accessing your SkyDrive documents from the Desktop is very easy and surprisingly slick. Souped up Metro Control Panel: For touchscreen users, one of the biggest changes in Windows 8. No longer will you have to fall back to the Desktop Control Panel to change a large number of system settings! In a rare example of Microsoft being cool, Windows 8. The final version will be available this fall, and will be free to Windows 8 users. Check out our extensive collection of Windows 8 tips and tricks.

5: 8 Characteristics Of Successful User Interfaces - The Usability Post

Product Features you can do anything if you believe and put your mind to it, and you.

Lets take a closer look at each. Clear Clarity is the most important element of user interface design. Indeed, the whole purpose of user interface design is to enable people to interact with your system by communicating meaning and function. What does that do? Hover over buttons in WordPress and a tooltip will pop up explaining their functions. Concise Clarity in a user interface is great, however, you should be careful not to fall into the trap of over-clarifying. It is easy to add definitions and explanations, but every time you do that you add mass. Add too many explanations and your users will have to spend too much time reading through them. Keep things clear but also keep things concise. When you can explain a feature in one sentence instead of three, do it. When you can label an item with one word instead of two, do it. Save the valuable time of your users by keeping things concise. The volume controls in OS X use little icons to show each side of the scale from low to high. But what does intuitive really mean? It means something that can be naturally and instinctively understood and comprehended. But how can you make something intuitive? Familiar is just that: Identify things that are familiar to your users and integrate them into your user interface. Tabs are familiar because they mimic tabs on folders. You figure out that clicking on a tab will navigate you to that section and that the rest of the tabs will remain there for further navigation. Responsive Responsive means a couple of things. First of all, responsive means fast. The interface, if not the software behind it, should work fast. Waiting for things to load and using laggy and slow interfaces is frustrating. Seeing things load quickly, or at the very least, an interface that loads quickly even if the content is yet to catch up improves the user experience. Responsive also means the interface provides some form of feedback. Have you pressed that button successfully? How would you know? Is the software stuck or is the content loading? Play a spinning wheel or show a progress bar to keep the user in the loop. Instead of gradually loading the page, Gmail shows a progress bar when you first go to your inbox. This allows for the whole page to be shown instantly once everything is ready. I think that adapting to any given context is smart, however, there is still a level of consistency that an interface should maintain throughout. The Microsoft Office user interface is consistent for a reason. Attractive This one may be a little controversial but I believe a good interface should be attractive. Attractive in a sense that it makes the use of that interface enjoyable. Yes, you can make your UI simple, easy to use, efficient and responsive, and it will do its job well - but if you can go that extra step further and make it attractive, then you will make the experience of using that interface truly satisfying. There are of course many different types of software and websites, all produced for different markets and audiences. This means that you should fashion the look and feel of your interface for your audience. Also, aesthetics should be used in moderation and to reinforce function. Adding a level of polish to the interface is different to loading it with superfluous eye-candy. Google are known for their minimalist interfaces that focus on function over form, yet they clearly spent time polishing off the Chrome user interface elements like buttons and icons to make them look just right as evident by the subtle gradients and pixel thin highlights. Efficient A user interface is the vehicle that takes you places. Those places are the different functions of the software application or website. A good interface should allow you to perform those functions faster and with less effort. Almost, but not quite. What you really really need to do to make an interface efficient is to figure out what exactly the user is trying to achieve, and then let them do exactly that without any fuss. Implement an interface that lets people easily accomplish what they want instead of simply implementing access to a list of features. Apple has identified three key things people want to do with photos on their iPhone, and provides buttons to accomplish each of them in the photo controls. Forgiving Nobody is perfect, and people are bound to make mistakes when using your software or website. A forgiving interface is one that can save your users from costly mistakes. For example, if someone deletes an important piece of information, can they easily retrieve it or undo this action? When someone navigates to a broken or nonexistent page on your website, what do they see? Are they greeted with a cryptic error or do they get a helpful list of alternative destinations? Trashed the wrong email by mistake? Gmail lets you quickly undo your last action. Working on achieving

some of these characteristics may actually clash with working on others. For example, by trying make an interface clear, you may be adding too many descriptions and explanations, that end up making the whole thing big and bulky. Cutting stuff out in an effort to make things concise may have the opposite effect of making things ambiguous. Achieving a perfect balance takes skill and time, and each solution will depend on a case by case basis. What do you think? Do you disagree with any of these characteristics or have any more to add? A piercing, pitiless glance into the heart of the human condition. Thus, in the words of Ruskin, what good books give us is not mere knowledge, but sight. Sign up to my email newsletter to receive regular recommendations of exceptional books on a wide range of topics including design, art, history and philosophy. A summary of my latest posts will also be included.

6: Robin Thicke - Can U Believe Lyrics | MetroLyrics

annaroach: I saw this a while ago here. "More often than not, women get "harassed" because they look the part, wearing clothes that don't scream "Harass me", would be a start.

The BIO meeting is one of the single most important biotech business meetings of the year. And if the success of their job fair is a guide, it seems that one important piece of business for many BIO attendees is networking and finding a new job. At this job fair, as in many others, new graduates and those with limited experience compete for the attention of recruiters and employers. What I liked about this particular meeting, however, was the emphasis on job-seeker seminars and education. A variety of speakers brought many important points home to the audience. I was happy to get Tom out of his interviewing booth, and even more pleased that the "Seven Attributes of a Winning Hire" he provided seemed to have a broad interest to a variety of attendees.

Seven Attributes of a Winning Hire Attribute 1: Communication Skills Tom places this one first in his list of seven attributes. As a recruiter, I am constantly looking at client job descriptions that state that candidates must have "excellent communication skills. Excellent communication skills refers to one-on-one verbal language skills, writing skills, presentation skills, and in general the ability to "convey thoughts, opinions, suggestions, questions, and answers in an appropriate and professional manner," as Tom describes it. Effective communication skills include "listening skills. I learned long ago that you must focus on the person in front of you--you need to listen intently to every nuance of every question that the interviewer asks. Moreover, if you listen well, then you will ask questions that are much more perceptive. Do continued learning and development inspire you? What is it that you have learned recently? What do you want to learn in the future? Activities such as these demonstrate that you try to constantly improve and enrich your mind.

Team Skills Most corporate employers believe that the major difference between academia and industry is the culture of teamwork that pervades industry. These employers believe that the "ivory tower" has too large an emphasis on independence as opposed to interdependence. Have you worked in a successful team-based environment? What have you learned about teams in the workplace? Prepare yourself for questions in this area, as it regularly comes up in job interviews. Like Apotex, many companies believe that being a team player is an essential determination in a hiring decision. As I listened, I came to understand that this is indeed one of the most important differences for the person who is going to make it in industry. Who is it that benefits from the work that you do at the university? These people are customers! A focus on customers and on customer service is essential in order to bridge the gap into your new job in industry. Do you know who your customers are? Are you familiar with the needs and expectations of your customers? These questions and more will be asked of you in order to determine your understanding of this critical attribute.

Initiative Many companies will investigate this attribute through reference checking. They will ask your references these kinds of questions: Have you ever gone above and beyond the call of duty? What have you done to exceed the expectations of those whom you support? What kind of work hours do you keep? Instead, come up with examples before your interview. Be prepared to talk about some of your most important accomplishments, paying special attention to those situations that show you have gone the "extra mile" in order to satisfy the needs of the project and those who are counting on your efforts. That common thread was that people in industry are subjected to constant change, particularly in the biotech and pharmaceutical industries. A key part of your interview preparation will be to find some examples of how you have adapted to unexpected circumstances. What are your thoughts about why organizations have a need for change? Tell me about your experience in maintaining or exceeding your usual performance in face of some kind of dramatic change? As interviewers, we ask ourselves, "Does this candidate demonstrate the overall behaviors, skills, knowledge, and desire to grow? Employers test your "promotability" when they ask about your short-term and long-term career expectations. Promotable people have career plans in place, and they know where they are on that plan at any point in time.

In Conclusion Every company has a set of winning attributes it considers when making the decision to hire. I think that the seven attributes that Tom Kotsopoulos described represent what industry employers are looking for all over the world. Study them and make certain that you are ready to demonstrate examples of these

qualities in yourself throughout the interviewing process. My thanks to Tom Kotsopoulos and Apotex for allowing me to share these ideas.

7: Seven Must-Have Attributes That Get You Hired! | Science | AAAS

Why You Can Believe the Bible It is the history of the Bible that makes it unique among 'sacred texts.' See who wrote the Bible, how its reportive style is backed by archeology and historians.

Here are six straightforward reasons to believe that God is really there. No statements of, "You just have to believe. But first consider this. Here then, are some reasons to consider The complexity of our planet points to a deliberate Designer who not only created our universe, but sustains it today. But here are a few: If Earth were smaller, an atmosphere would be impossible, like the planet Mercury. If Earth were larger, its atmosphere would contain free hydrogen, like Jupiter. The Earth is located the right distance from the sun. If the Earth were any further away from the sun, we would all freeze. Any closer and we would burn up. The Earth remains this perfect distance from the sun while it rotates around the sun at a speed of nearly 67, mph. It is also rotating on its axis, allowing the entire surface of the Earth to be properly warmed and cooled every day. And our moon is the perfect size and distance from the Earth for its gravitational pull. The moon creates important ocean tides and movement so ocean waters do not stagnate, and yet our massive oceans are restrained from spilling over across the continents. Plants, animals and human beings consist mostly of water about two-thirds of the human body is water. It has wide margin between its boiling point and freezing point. Water allows us to live in an environment of fluctuating temperature changes, while keeping our bodies a steady Water is a universal solvent. This property of water means that various chemicals, minerals and nutrients can be carried throughout our bodies and into the smallest blood vessels. Without affecting the makeup of the substances it carries, water enables food, medicines and minerals to be absorbed and used by the body. Water has a unique surface tension. Water in plants can therefore flow upward against gravity, bringing life-giving water and nutrients to the top of even the tallest trees. Water freezes from the top down and floats, so fish can live in the winter. But on our Earth, there is a system designed which removes salt from the water and then distributes that water throughout the globe. Evaporation takes the ocean waters, leaving the salt, and forms clouds which are easily moved by the wind to disperse water over the land, for vegetation, animals and people. It is a system of purification and supply that sustains life on this planet, a system of recycled and reused water. Your brain takes in all the colors and objects you see, the temperature around you, the pressure of your feet against the floor, the sounds around you, the dryness of your mouth, even the texture of your keyboard. Your brain holds and processes all your emotions, thoughts and memories. At the same time your brain keeps track of the ongoing functions of your body like your breathing pattern, eyelid movement, hunger and movement of the muscles in your hands. The human brain processes more than a million messages a second. This screening function is what allows you to focus and operate effectively in your world. The brain functions differently than other organs. There is an intelligence to it, the ability to reason, to produce feelings, to dream and plan, to take action, and relate to other people. It has automatic focusing and handles an astounding 1. Yet evolution alone does not fully explain the initial source of the eye or the brain -- the start of living organisms from nonliving matter. The universe had a start - what caused it? Scientists are convinced that our universe began with one enormous explosion of energy and light, which we now call the Big Bang. This was the singular start to everything that exists: Astrophysicist Robert Jastrow, a self-described agnostic, stated, "The seed of everything that has happened in the Universe was planted in that first instant; every star, every planet and every living creature in the Universe came into being as a result of events that were set in motion in the moment of the cosmic explosion The Universe flashed into being, and we cannot find out what caused that to happen. It had a start Scientists have no explanation for the sudden explosion of light and matter. The universe operates by uniform laws of nature. Much of life may seem uncertain, but look at what we can count on day after day: How is it that we can identify laws of nature that never change? Why is the universe so orderly, so reliable? There is no logical necessity for a universe that obeys rules, let alone one that abides by the rules of mathematics. It is easy to imagine a universe in which conditions change unpredictably from instant to instant, or even a universe in which things pop in and out of existence. The fact that there are rules at all is a kind of miracle. All instruction, all teaching, all training comes with intent. Someone who

writes an instruction manual does so with purpose. Did you know that in every cell of our bodies there exists a very detailed instruction code, much like a miniature computer program? As you may know, a computer program is made up of ones and zeros, like this: The way they are arranged tell the computer program what to do. The DNA code in each of our cells is very similar. These are arranged in the human cell like this: There are three billion of these letters in every human cell!! Well, just like you can program your phone to beep for specific reasons, DNA instructs the cell. DNA is a three-billion-lettered program telling the cell to act in a certain way. It is a full instruction manual. One has to ask These are not just chemicals. Natural, biological causes are completely lacking as an explanation when programmed information is involved. You cannot find instruction, precise information like this, without someone intentionally constructing it. We know God exists because he pursues us. He is constantly initiating and seeking for us to come to him. I was an atheist at one time. And like many atheists, the issue of people believing in God bothered me greatly. What causes us to do that? When I was an atheist, I attributed my intentions as caring for those poor, delusional people To be honest, I also had another motive. As I challenged those who believed in God, I was deeply curious to see if they could convince me otherwise. Part of my quest was to become free from the question of God. If I could conclusively prove to believers that they were wrong, then the issue is off the table, and I would be free to go about my life. I have come to find out that God wants to be known. He created us with the intention that we would know him. He has surrounded us with evidence of himself and he keeps the question of his existence squarely before us. I am not the only one who has experienced this. Malcolm Muggeridge, socialist and philosophical author, wrote, "I had a notion that somehow, besides questing, I was being pursued. Lewis said he remembered, " I gave in, and admitted that God was God, and knelt and prayed: Yet over the following several months, I became amazed by his love for me. Unlike any other revelation of God, Jesus Christ is the clearest, most specific picture of God revealing himself to us. None of them ever claimed to be equal to God. That is what sets Jesus apart from all the others. Though he talked about his Father in heaven, it was not from the position of separation, but of very close union, unique to all humankind. Jesus said that anyone who had seen Him had seen the Father, anyone who believed in him, believed in the Father. He said, "I am the light of the world, he who follows me will not walk in darkness, but will have the light of life. Unlike other teachers who focused people on their words, Jesus pointed people to himself. He did not say, "follow my words and you will find truth. He had power over objects He performed miracles over nature People everywhere followed Jesus, because he constantly met their needs, doing the miraculous. Jesus revealed that although he views us as sinners, worthy of his punishment, his love for us ruled and he came up with a different plan. God himself took on the form of man and accepted the punishment for our sin on our behalf. Perhaps, but many loving fathers would gladly trade places with their child in a cancer ward if they could. The Bible says that the reason we would love God is because he first loved us. Jesus died in our place so we could be forgiven.

8: Can You Believe It? | Skills | Oxford University Press

Recent Features. I'm looking for. Can You Believe This Was a Freebie? Yay yay yay! I'm finally ready to share the redo of my free curbside dresser! I'm.

9: History of the Bible - Who Wrote the Bible - Why It's Reliable

Lyrics to 'Can U Believe' by Robin Thicke. Nothing can make you high / Or put fire in your eyes / Or give you a chance to fly / When you need the wings / When.
