Find Your Own Truth is a good book and a fun read if you have been following the series. On a personal level I found this book the least enjoyable of the three of them, but that is because I have particular taste.

This is the third Shadowrun novel and the final book in the initial trilogy. The protagonist, Samuel Verner, returns to North America to help his sister. His sister has had a double whammy in that she metamorphosed into an Orc, but was then infected by the HMHVV Human Meta-human Vampiric Virus and ha The conclusion to a very ordinary trilogy 7 February I might step away from exploring the Shadowrun Universe and instead look at some ideas that come out of this novel or at least its title. In the Shadowrun universe Vampires are not the scheming manipulators that we discover elsewhere but rather diseased individuals that feed on others and then infect them. They are not undead, as one expects them to be, but rather diseased individuals that turn into mindless monsters much like the creatures in I Am Legend. The virus turns humans into vampires, while it turns orks into Wendigos which means that there is little difference between the two creatures – they are both ravenous blood sucking monsters. The one thing that I have noticed about Shadowrun is that there are no undead. In Shadowrun death is pretty much death. There is no magic that brings the dead back to life, or even reanimates their dead corpses. The creatures in the Shadowrun world that are named after undead creatures tend to be diseased, which made me think that something like the Rage virus would be perfect for this world. Unlike the 28 days movies, there is much more of an ability to defeat, and even cure, people afflicted by the virus. The title of this book to me is a little corny, and reeks of existentialism. It is the idea that we discover our own truth, and that truth is entirely relative. While I believe that truth is objective a table is still a table no matter what name you call it, and if you bang your leg on one, it hurts I can understand where concepts of truth can be misunderstood. Somebody stating that all Port Power supporters are losers is not speaking a truth, but giving an opinion. While somebody may say to you that they are your friend, the fact that they said it does not make it a truth, it is only, once again, an opinion. To me, football supporters come in all shapes and sizes, some are good, some are bad. Friendship is not defined by words but by actions. Somebody who says that they are your friend but who will never lift a finger to help you is probably not a friend. The problem with using such an existentialist title for a roleplaying spin off, to me, is just corny. To be honest, I probably would not read such a book anyway because, to me, truth is truth, it is objective, it cannot be anything else. The role of a judge in a court of law is to determine the objective truth of the situation put before him or her , to weigh up the characters of the people putting forward their versions, determining the credibility of the characters, and then coming to a conclusion. It is a system that I think is good though the European system is better as more power rests with the judge to investigate rather than with the lawyers who simply put forward opposing versions. Personally, I believe that all this talk about making our own truth, and making our own reality is just plain silly. Unfortunately, unless somebody actually moves it to Berlin, the Eiffel Tower is in Paris, and if somebody tries messing with me by changing the name of the tower in Berlin to the Eiffel Tower, I would probably recommend that they confirm that with the French before making such an outlandish statement.
