## 2: Fire Engineer Oral Board Questions - My Fire Job

*page book with seven chapters of information designed to prepare firefighters for the practical - oral interview portion of the Fire Engineer-Apparatus Driver-Pump Operator exam.*

Fire Engineer Interview Questions Fire Engineer interview questions and Driver Operator interview questions We have compiled a list of over 80 fire engineer interview questions that were used in real interviews. One of the most stressful events of your career will be the promotional interview for fire engineer. It is very difficult to gather your thoughts and articulate an intelligent response to questions thrown at you by a panel of Chiefs and upper command staff. Luckily many fire engineer interviews follow the same general blueprint. It will usually begin with basic, general questions about you. Then move onto harder and more specific questions. Most interviews will consist of several difficult scenario questions in which the candidate will have to walk the panel through an incident from start to finish. Here are some sample fire engineer interview questions from our ebook. Tell the panel about yourself and why you want to be an Engineer. What experience do you have driving fire apparatus, or heavy trucks? Have you ever had a traffic violation of any kind? As a promoted engineer, what do you feel will be the greatest challenge you will face? You are a newly promoted engineer at a station with a veteran firefighter who does not like to wear his seatbelt when responding to calls. How will you handle this situation? As a newly promoted engineer, what will you do to support your Captain, Battalion Chief, and Fire Chief? Describe your typical duties as an engineer as part of a Rapid Intervention Team. What is NFPA and how does it affect your job as an engineer? Describe a difficult situation you encountered while on our department and how you handled it. These are excellent fire engineer interview questions. Our ebook has over 80 of these that were gathered from actual fire engineer interviews. Our ebook even provides you with the most commonly asked scenario questions, strategies for a successful interview, and a comprehensive study system that helps you formulate your thoughts into great answers. This book is the best way to prepare for one of the most important interview of your life. You can find our fire engineer interview ebook here.

## 3: CAL FIRE - Current Examinations

*This bar-code number lets you verify that you're getting exactly the right version or edition of a book. The digit and digit formats both work.*

Only when passing Part 1 will Part 2 be scored. A passing score in both test parts is valid indefinitely. If candidates fail Part 1 or 2 of the written test, they may take the entire written test again two years from their last written test date. Part 1 of the test measures mathematics such as addition, subtraction, multiplication, division, ratios, square roots, and the use of decimals, fractions, and percentages. Part 1 also measures reading comprehension. Part 2 measures job-related personal characteristics that have been demonstrated to be indicators of success as a firefighter. The test is not intended to be one you have to study for. Your high school education and personal experiences have given you training in reading and mathematics. If you feel you need improvement in these areas, you can study to improve. Try to understand its full meaning and implications. Exactly what you read is not nearly as important as how well you use it to sharpen your reading skills. So choose a subject that interests you. Ask such questions as: How can I state the main idea using different words? Why is the statement true? How could I make practical use of this information? The best thing to do on this part of the test is to answer the questions honestly. Your experiences, attitudes, and interests have built up over a lifetime and would be difficult, if not impossible, to change. Any attempts to "fake" the right answer may not be correct. So, again, the best advice we can give you is to answer these questions honestly. This means that each question gives you a set of answers from which to choose. You are to choose the one answer that is the best one, the one most nearly or most often correct, or the one usually true for you. Here is an example. It makes a very important point, so pay special attention to it. The number of days in a year is A. Choice B is true for leap years, but most years have days. Therefore, choice A is the best answer. Read the entire question carefully. Be sure that you know what the question asks, and what the choices say. On every test, people choose wrong answers simply because they failed to read the question or answers carefully, or because they chose an answer before reading all answers. Answer according to what is generally or usually true, not by what would be true in some particular case. Remember the question about the number of days in a year. The right answer was the one that was true for most years, not the one that was true for leap years. To keep the questions short, they cannot go into a lot of detail. Sometimes there is no answer that is complete, or exactly correct, or always correct. The best answer is the one that is right, under ordinary conditions. For example, look at this question: In reading this information, it is most important that a person A. However, what is most important is that a person understands what he or she reads. Therefore, choice B is the right answer. Use your time efficiently. The Firefighter written test is not a speed test, but it does not give you unlimited time, either. When you have trouble deciding on the best answer but have decided one or two answers are definitely not best, avoid further consideration of those, and concentrate on the answers you think might be correct. Numbers 4 and 5 below will give you a good plan for handling questions that are hard for you, helping you not to get bogged down elsewhere on the test. Your decision should be one of the following: You may decide you know the answer. You have little or no doubt about it. Mark your answer on the answer sheet. Spend no more time on that question. You may decide that figuring out the answer is possible, but will take you a lot of time. Simply skip the question for now and come back to it later. In answering the next question, make sure you are at the right place on your answer sheet. Mark the answer sheet to show your guess. There is no penalty for guessing and sometimes you will guess correctly. If you can narrow down your guessing to the two or three most likely answers, you can increase your chance of guessing correctly. Many people give up too easily on test questions. Here are some of the kinds of questions people give up on that they could answer if they just tried harder: Mathematics questions may appear difficult because of the symbols or letters used, but remember, they all test for these basic operations: Questions testing your ability to read, understand and use what you have read. Sometimes people give up on a question because it looks technical, when all the information needed to answer it is right there in front of them! Sometimes the reading material looks long and complicated. Look for the main idea. Look for the specific information you need to answer the

question. In a test like the one for Firefighter, some questions are easy and some are hard. Probably no one will make a perfect score. If it is hard for you to figure out an answer, it is probably hard for other people too. Keep your mind on the test and try! When people change answers, they more often change from a right answer to a wrong one, than from a wrong answer to a right one. The reason seems to be that people concentrate on a special case. This results in choosing the answer on the basis of facts that are not given in the question. Or people concentrate on one part of a question and forget about the rest of the question. Remember, the best answer is the one that is usually or generally right. Be at your best the day of the test and be on time. Allow plenty of time to get to the test site. Plan to get there early. See if you can answer all four questions correctly, without looking back at any prior material. The Firefighter written test may include questions to test your ability to: The best way to prepare for the test is: All except one of the ideas stated below have been described in this booklet as good ideas. Which one is the exception? When you can answer all the questions correctly, go on to the next section. Two ingredients are mixed in a ratio of 3: How many gallons of the lesser ingredient are in this solution?
