Reddit 0 Shares The Starship. The starship in Trek Lore is as much as a symbol of the each series as its captain and crew. The ship, its class, its technical specifications, and its history have become a passion for many Star Trek fans; where endless debates have been raging on since the U. Enterprise first graced the screen in One of these most recognizable designs was the Galaxy-class, U. A class design that was very different from the old Constitution, but still had familiar lines that told us that this was a Federation starship. The Enterprise was commissioned from Utopia Planitia Shipyards in and by the mids, five sister ships were in commission. A candidate for the sixth sister was the U. This one of the debates that would keep coming up. In the novels, the Magellan was a Galaxy-class and it was not until The U. Registry Numbers Now, we get into another endless debate, registry numbers. Are they chronological or are they a random number? In modern Trek, they are chronological with some minor exceptions. For the column, the registry numbers are chronological. The Yamato was the second Galaxy-class starship to be revealed, but in the span of the first two seasons, the Yamato was given four different registry numbers: The first one was spoken by Commander Riker, the next two were seen on the ship model and the last one was on an okudagram. However, the first two were the ones most associated with the Yamato. Canon Now, there is another debate. The canon versus non-canon debate. What is canon by official Trek terms, on-screen is what rules the day. While other things else is there for our enjoyment. Galaxy Class The Galaxy-class starship was first commissioned in the late s as the most advanced Federation starship to be built to date. The Galaxy-class was designed during an era of a number of conflicts such as the Cardassian Wars and the Tzenkethi War as a mobile starbase. The Galaxy-class would serve the Federation in a number of first contact and exploration discoveries led by the voyages of the Enterprise as a cultural flagship. In the dawn of the 2nd Federation-Klingon War, the Enterprise and her sister ships started to take on the role of a tactical flagship. The Venture would go on to lead task forces to Starbase Deep Space Nine during these difficult years. The Galaxy The first of the class and the vessel survived into the last year of the 3rd Federation-Klingon War. The Galaxy would be found patrolling near Earth Spacedock. An Iconian Gateway led to the ship during the initial escape from the Solonae Dyson. The Galaxy would fight in the defense of Earth against the Undine attack on the system. Captain MacDonald of the Monarch was able to hold off a relief column of Lethan warships until the support ships were able to evacuate the remaining colonists off of Tanis. While, the warp core is offline, however the beta core is keeping the majority of the primary systems operating at low power. The only part left of it was the name Galaxy. The Challenger Geordi La Forge assumes command a little later than the previous incarnations at The newly assigned Captain was interviewed by Jake Sisko and it was revealed that La Forge was marrying his chief engineer. The Challenger will remain in service and it is now currently keeping station near Earth Spacedock. A plaque of the Enterprise was placed on a starbase. The Marquette led the task force gathered at Mining Facility Delta. The Musashi en route to Memory Alpha prior to its classified mission. The Musashi sent a boarding party on the bird of prey that were defeated. The Musashi was destroyed in battle against a number of KDF vessels. The Phlox was assigned to the Psi Velorum Block and the crew discovered an archaeological find on a planetoid in the Hyralan Sector. Celestial Class The Celestial-class was an upgrade of the Galaxy-class starship. The Celestial was designed as a sleeker starship taking design cues from the Sovereign and the refit Constitution classes. Another design feature enhanced was the exploration capabilities in comparison to the Galaxy and the mobile starbase concept was dropped in favor of a more colony in space. The shuttlebays were re-located to the sides of the engineering section to make that section a spaceport and main engineering was located in the aft saucer section. The Celestials were mainly in the far reaches of space when the Romulan internal conflicts with the various Klingon interventions fired up. Two of the Celestials were included in the Korvat Evacuation. The remaining Celestials in Federation space, were immediately

recalled to shipyards for emergency refitting. During the war, the Celestials were relegated as troop transports and emergency hospital ships. The deep space Celestials were recalled in late The Celestial The USS Celestial entered service during a renewed Federation effort to explore during the s and the ship was one of the first to go on a deep-space mission. The Celestial returned to Federation space in early after a twenty-year exploratory mission in the Gamma Quadrant. After a brief refit, the Celestial was assigned to patrol Earth. The Celestial would fight in the defense of Earth during the Undine attack on the system due to the patrol route. The Celestial would survive the battle and can still be seen patrolling near Earth. Recently, the Envoy was assigned to patrol the Sol System. The Envoy would take part in the evacuation of a number of orbital facilities during the Undine attack on the system. The Monarch took design lines from the Galaxy and gave it a more aggressive look. The nacelles were angled to help against a KDF tactic of targeting warp nacelles during a number of early engagements. The impulse engines, the warp pylons, and a number of vital areas received a significant armor upgrade in which the class would later be called the Armored Targ by KDF officers. The Monarch-class starships would start to enter the war during the last half of , just in time to stop a number of KDF-led offensives into Federation space. The Monarch would earn a notoriety with the KDF and her allies. The Monarch and her sister ships would have their identification marks taken off in order to grow the legend of the Armored Targ. I cannot believe I have returned and yet, all I can think about is about the harvest festival at New Apex. Now that I have returned, maybe my nightmares can finally go away and I can at least tell my ghosts that I visited their home. Venture Class The Venture-class was the newest incarnation of the Galaxy and one of the newest class of starships to enter service. The Venture takes design cues all of the other Galaxy-class incarnations. The Venture-class was designed primarily to land MACO teams and Federation ground forces with the ability to provide fire support at the same time. The brand-new USS Aspire prepares for its first mission. The Venture would take part in a number of liberations in the Southern Sirius Block. The Venture was ambushed and attacked by Borg forces in fluidic space.

### 2: First Contact (novelette) - Wikipedia

*First Contact and Exploration Team* by Murray Leinster, read by David Warner Dercum, Unabridged Audio Published: ISBN: To me, *First Contact* is probably the best Science Fiction story ever written.

Plot[ edit ] Space travel is routine between planets in the Solar System. Ships function very much like naval warships or research vessels. There are technologies such as "overdrive" which allows a ship to travel much faster than light in normal space, and apparently artificial gravity within a ship. Atomic power is used everywhere, even in a space suit propulsion unit. Ships are equipped with "blasters", not necessarily for use as weapons, but for destroying space debris which would otherwise collide with the ship. The exploration ship Llanvabon presumably named after the village of Llanfabon in Wales is approaching the Crab Nebula when it suddenly detects another ship on its radar. Even after the problem is resolved and the two crews, one human, one alien, establish communication, both realize they have a problem. Neither can leave without ensuring that the other cannot track them to their home planet. The aliens are humanoid bipeds, but see in the infrared portion of the spectrum. Also, instead of using sound to communicate among themselves they use microwaves emitted from an organ in their heads. As one human points out, "From our point of view, they have telepathy. Of course from their point of view, so do we. This is especially true of young Tommy Dort and his counterpart on the other ship, to whom he has assigned the name Buck. Although they are only able to communicate through an artificial code, they are able to establish a rapport. However, Buck is pessimistic about the eventual outcome. He sends Tommy a message, "You are a good guy. Too bad we must kill each other. Neither ship dares to leave for fear that the other will be able to track it home. Neither captain is ready to gamble by attacking the other ship. Then Tommy realizes the way out of the impasse. He and his Captain arrange an exchange of personnel between the ships. Tommy and the Captain go aboard the alien ship even as two aliens board the Llanvabon. Then they present an ultimatum: Each will disable all the tracking equipment on their own ship before the exchange, and indeed they will have to be thorough to prevent the new crew from tracking them. At this point the aliens begin behaving very strangely, twitching or lying down and kicking the floor. In fact this is their equivalent of laughter. Their own people have just given the humans the same ultimatum, and the same plan. Naturally, before leaving their own ship they are able to remove everything which might point back to their home world. They agree to repeat the encounter at the same location some time in the future. Tommy is confident that the two races will get along. He believes this because, as he tells the Captain, he and Buck spent a good deal of time swapping dirty jokes. Radio plays[ edit ] This story was performed as a radio play on Dimension X on September 8, and on X Minus One on October 6, , condensed somewhat and with a different ending. The story was also performed on Exploring Tomorrow on January 15,

### 3: Amazon tribe makes first contact with outside world | Environment | The Guardian

*"Exploration Team" is a science fiction novelette by American writer Murray Leinster, originally published in the March issue of Astounding Science www.enganchecubano.com won the Hugo Award for Best Novelette in*

It is a journey that will turn their lives upside down, challenging their perceptions and confronting their prejudices about a world they never imagined they would see. Season 1 Participants Age: The daughter of a Canadian Mounted Police Officer father and a Portuguese immigrant mother, she was a shy little girl. This was largely due to abuse she suffered from a family member, which went on for several years. Her outlet became sports, and she joined every team the school had to offer. Despite this, the bullying continued, with her classmates at the Catholic school labeling her gay, even before she had personally come to terms with her sexuality. On entering Algonquin College for the Police Foundations program, Ashley found her rhythm, excelling in her classes, meeting her first girlfriend, and being chosen for the starting lineup of the college soccer team. After college, she met her goal of entering the police force. After working with the RCMP for eight years, Ashley did some soul-searching and realized the job was not making her happy. She quit, and found her passion as a personal trainer, forming her own business focused on helping clients with athletic performance. After a year and a half of building her business solo, she and a business partner and mentor, Mike, bought three fitness centre franchises. Having been through many challenges and hard times, Ashley is an empathetic person who is interested in learning about other people before passing judgment. However she is a direct, outspoken person and believes every Canadian has a right to their own opinion and the right to express it. Edmonton, AB Family man Ross has his roots firmly planted in Alberta, but has explored the world as well, first as a young child living in New Zealand with his family, and later in the Navy. Growing up in small town Alberta he loved to do all the classic Canadian activities: After school, Ross spent thirteen years in the Navy, followed by studies in accounting, working in a bank and eventually working for the government. He raised his family in Edmonton, and now has three nearly adult children, of 20, 18, and One of his greatest passions is travel, exploring all over Canada and around the world with his family. His mother was originally from New Zealand, so that is a regular stop on his adventures. Ross is blunt, outspoken and opinionated. He believes specialty groups lobbying for their own needs are the biggest problem that Canada faces. Ross holds his beliefs strongly, believing that hard work and classic Canadian values are the key to success, and expecting anyone who has the opportunity to live in Canada to feel the same. Ingersoll, ON Country-born and bred, Jamie-Sue loves big trucks and small-town Canada but she defies any stereotypes that go along with country life with her open-mindedness and compassionate nature. A balance of the left and right sides of her brain, Jamie-Sue excelled in both accounting and art while in school. Post-high school she partied her way through college until it was time for reality to set in. One of the advantages of the role has been the opportunities it has given her to travel, including moving to Mississippi for seven months for a job, exposing her to a whole new world of music and food. She traces this back to her father, a talented wood-worker. Travel is another passion, although many destinations remain on her bucket list. A huge Seattle Sea Hawks fan, one of her dreams is to travel to Seattle to see her favourite team play. Optimistic by nature, she loves that Canada is geared towards helping others; be it equal pay or the programs that encourage women to enter trades, she loves that there is opportunity for growth for all. She feels, however, that the country could do much more to help its most marginalized communities, like those suffering from addiction or mental health issues. She believes we are only as good as the way we treat those most in need. Outgoing and athletic from childhood, he spent his time playing sports and hanging out at the community centre with the same group of kids he is still friends with to this day. He looks to his mom especially as a role model, having worked hard to support them as a single mother after her split with his dad. She always made sure he was able to participate in the activities his friends were doing, despite a limited income. In high school his main interest was in sports, joining basketball, lacrosse, football and hockey. He feels the discipline he learned on these teams played a big role in his future success, as they kept him out of trouble and focused on good habits rather than bad. He picked up and moved to Alberta and began his welding apprenticeship, learning the trade over the course of three years. By 22 years

old he had achieved his goal of becoming a journeyman welder. Chosen to be on the show, he made a big impression on the audience for wearing his heart on his sleeve, getting fired up, and taking on every challenge with his signature enthusiasm. He was so memorable that he was one of eight former houseguests asked to return for the following season, which pitted these returning competitors against new ones. Dallas has explored some of Canada through road trips between Edmonton, where he still works as a welder, and Saint John, where he spends the summers lobster fishing. Travelling the world is at the top of his bucket list, and he is looking forward to beginning by seeing more of his own country. Avonlea spent her earliest years moving from town to town throughout the British Columbia, before settling in Pemberton when she was ten. The constant shuffle meant that she learned quickly to adapt to new social settings, turning on the charm to make friends in each new school. Having grown up quickly, it felt natural to her to move in with her now-husband when she was just seventeen years old. After testing several career paths she found the right one for her; event management, which was a great fit for her perfectionist nature. Now a mom of two young boys, Avonlea looks after them full time, while her husband works in construction. They love to do the simple things as a family: Avonlea has spent her life caring for others, from her brother to her own young sons, and her big-heart and compassion are her defining qualities. Open to learning and change, she is curious and excited to explore Canada. Ardrossan, AB Donald has spent his whole life based in Alberta. He grew up in a close-knit community, and still has several of the same friends he went to school with as a child. After high school he studied business at the University of Alberta, and ventured into sales afterwards. His passions include flying airplanes, a hobby he shared with his father and brother. He eventually got his commercial pilots license and taught flying for several years until a physical limitation forced him to stop. Another hobby-turned-job was scuba diving, for which he was certified, and taught at the University of Alberta for thirty years. Donald is proud to consider himself honest, with a strong work ethic and integrity. He does consider himself vocal, and not afraid to speak his mind. An opinionated conservative, he considers the freedom to live in a safe, clean place without war and suffering the best thing about Canada. Copyright First Contact Canada Inc.

## 4: First Contact - TV Tropes

*First Contact takes six Canadians, all with stereotypical opinions about Indigenous People, on a unique day exploration of Indigenous Canada. It is a journey that will turn their lives upside down, challenging their perceptions and confronting their prejudices about a world they never imagined they would see.*

This trope is for when there is a "team" assembled, usually comprised of scientists, mathematicians, cunning linguists, and usually a few oddball specialties. Or, if the aliens behavior is bizarre and incomprehensible, you might have an anthropologist on the team to help discern their meaning. Film *In Sphere* by Michael Crichton, when an alien ship is discovered at the bottom of the ocean, the government sends a team composed of a psychologist, a mathematician, a biologist, and an astrophysicist. Later becomes a subversion: According to Agent Kay in the movie *Men in Black*, first contact with aliens was made in , with 9 humans present: Played with in *Close Encounters of the Third Kind*: The government has its own team ready, but the only human the aliens will deal with is Roy Neary, who is the only one of the alien-recruited humans to actually make it all the way to the contact site. In *Blindsight*, by Peter Watts, the crew of the *Theseus* consists of highly specialised individuals specially assembled to be able to initiate First Contact, all of which have something unusual about them: In the novel *Contact*, an international team is assembled in order to make contact with the aliens who sent the signal. In *The Voyage of the Space Beagle*, the eponymous ship is staffed with a wide selection of specialists, including a Nexialist, a scientist who specializes in the general use and assimilation of knowledge. They turn out to be much less useful than a general-turned-politican who had been sent along as an official ambassador, and who had many fewer preconceived notions. The next military man to show up is the protagonist, an Air Force Intelligence officer who respectfully offers the captain some intelligence and practical advise which is taken, then waits quietly while a team of scientists and military brass dispatched by the President argue. When the Sun-kissed agree to negotiate in *Musketeer Space*, the hastily-put-together First Contact Team includes a mob of linguists, a group of Mendaki another species of alien - what they bring to the table is never made clear, and lampshaded by the other characters, an agent who has worked with a Sun-kissed spy in the past, and two Musketeers who have previously had sex with said Sun-kissed spy. Live Action TV Any Star Trek episode that revolved around first contact, from any season, often had this with the away team, although they avert it almost as much. *Stargate SG-1* had the main team be a pretty balanced collection who take up a number of roles: Also somewhat present in the *Stargate* movie. Similar to SG-1, the team in *Stargate Atlantis* is frequently sent out on first contact missions, though they eschew an anthropologist in favor of a "native guide" in the form of Teyla. The pilot episode of the short lived sci-fi show *Threshold* starts with one of these being organized. Newspaper Comics In the Modesty Blaise storyline "Take Me To Your Leader", a respected scientist and government advisor encounters what he believes is a first contact situation, and Sir Gerald Tarrant is given the job of selecting a small discreet first contact team. If not, or if first contact is made by a militant body, the Imperium will wipe away the alien species soon afterwards. The Tau have the friendliest First Contact policy, trying to negotiate with minor species and try to bring them into their stable of client species. Some species simply prove too aggressive and have been exterminated as a matter of pragmatism. Most species to make first contact with the other major galactic powers will find themselves killed, and maybe eaten afterwards. The major exception is the Craftworld Eldar, with historical precedent suggesting that they prefer to remain unseen and would ignore most species unless they can prove useful. Video Games First Contact Teams were mentioned in passing in *Mass Effect 2* as envoys from Council space to any newly discovered species. In this instance, the species in question was the yahg, and the incident got the yahg blacklisted and their world blockaded. Humanity never had the benefit of First Contact teams, as we had expanded far space and ended up meeting the Citadel species by accident. Specifically, the turians, who caught humans illegally reactivating mass effect relays, and assumed we were pirates. The ensuing war was brutal and brief, and made more bitter by a number of misunderstandings which nearly escalated the situation into a galactic crisis. The other Citadel species caught wind of the situation, stepped in and brokered a cease fire, paving the way for humanity to join the Citadel. The incident was a point of contention between

humans and turians for years after. Although only one of them is in on it at first, the three protagonists of *The Dig* are such a team. Ostensibly, they were organised in order to stop an asteroid collision, but the government also picked them on the basis that the asteroid had intelligent beings behind it - and it did. In *Shin Megami Tensei: Strange Journey*, the expedition into the Schwarzwelt consists of both scientists and soldiers. However, the signal is later determined to be a distress call, resulting in the civilian team being replaced by a fleet of well-armed warships. These were usually sent for utilitarian rather than scientific purposes and some behaved quite brutally. Yet in fact they were a first contact team and may have been the inspiration for this Trope. Vasco De Gama was sent around the Cape of Good Hope for instance; in his case the mission was botched through bad intelligence. They found India and found it had been almost as rich as legends painted. In this case they were able to settle for another kind of means which was good enough for the purpose as no local prince had much of a navy. The Polo family had the patronage of the papacy which thought they might be able to find a potential ally against the Moslems. Other than a small Dutch presence on an island just offshore of Kagoshima who were only allowed to trade in Japan once a year, it was the first large-scale Western presence in Japan in years of Tokugawa Shogunate rule Japan having all but shut itself off from the rest of the world as a result of adopting its sakoku policy. Once Japan realized just how far behind it was technologically, the shogunate sent its own embassy on a tour of Europe, eventually setting the stage for its very rapid industrialization in the Meiji Era. A lot of various governments and intergovernmental organizations do indeed have contingency plans in the event that extraterrestrials ever land on their part of Earth, though of course these plans do tend to change as various administrations come and go. Some of these plans also involve arresting the extraterrestrials and impounding their ship; which might explain why extraterrestrials in range, if there are any, have been keeping their distance from us.

### 5: Top shelves for First Contact and Exploration Team

*The Hugo Award-winning "Exploration Team" was the inspiration for our full-color cover art by Hannibal King. Also, here for the first time are "The Great Catastrophe," his lost pulp epic, and the inspiring "To All Fat Policemen."*

From top-level numbers like revenue and conversion rates, all the way down to granular measures like specific customer flows and behaviors how many of our customers activated the Slack integration and created a knowledge base article on their third visit? This capabilityâ€™ completely unprecedented and, until not that long ago, totally impossible for small businesses without big data-collection budgetsâ€™ is a good thing, but it also leaves us with a challenge: Which metrics are just going to be numbers on a wall, and which ones can actually help us move our business forward? In customer service, there are plenty of useless metrics. And there are many businesses that waste time tracking them, just because they can. But which metrics really matter? That metric is first contact resolution. What Is First Contact Resolution? For phone support, that means resolving the issue in a single phone call. For email and social media support, that means resolving the issue in a single response. For live chat support, that means resolving the issue in a single chat session. How to Calculate First Contact Resolution Rate You can use a simple formula to calculate your first contact resolution rate: If you focus too much on response time, then your responses will suffer. FCR is also one of the few metrics that has been directly correlated to real customer satisfaction. Findings support a high correlation between FCR and customer satisfaction: Among the respondents who reported an increase in FCR over the previous 12 months, 75 percent indicated a resulting increase in customer satisfaction. Simply put, first contact resolution makes your customers happy. But it can make you and your team happy, too. So increasing your FCR rate can make your customers happier, make your team more efficient, and save your business time and money. But how do you actually improve FCR? Here are some best practices how to avoid making those mistakes, and get your first contact resolution rate up: Walk up to any employee in any section, and ask them where a particular item is. You can apply this example online, too. Does your customer need to follow a link and fill out a form to make updates to their account? Make the updates for them. Set up a screen share on Skype or Google Hangouts and walk them through it. When in doubt, do it for them. This lets you add personal touches to support conversations, but it also arms you with valuable information that can help you achieve FCR. For example, if we know that a customer uses a particular Groove integration, and their issue can be solved through that tool, we can go that route with our response, rather than suggesting something more difficult. You might also find useful: Now that you understand it, use the tips in this post to make it happen.

*First Contact provides a service for customers, their relatives and carers, and, with other professionals. Service Information The Social Work First Contact Team improves referral and assessment timescales for services for people in Dundee.*

Plot summary[ edit ] The novelette is set in a future time during which humanity has begun colonizing planets in other solar systems. The Colonial Survey agency has decreed the fictional planet of Loren Two to be off-limits, due to the extremely dangerous native animals. Despite its decree, the Colonial Survey has authorized an experimental colony on the planet. At about the same time, the overcrowded inhabitants of another planet have established an unauthorized reconnaissance station on Loren Two. The authorized colony is well-funded, consisting of one dozen persons equipped with advanced robotic and other equipment. The unauthorized reconnaissance team consists of a single man, Huyghens no first name given , accompanied by an eagle and four specially-bred Kodiak bears. The bears have been bred the story uses the term "mutated" so as to have the psychological profile of dogs. They are friendly to humans and able to work in teams. When the story begins, Huyghens receives a signal indicating that a ship is about to land near his station. The ship drops off its sole passenger, an officer with the Colonial Survey named Roane no first name given , and then departs. For his part, Huyghens is surprised to learn that there was an authorized colony on the same planet. From this, the two men surmise that the authorized colony has been overrun by the indigenous predators, but that some colonists might still be alive in the mine tunnels that the colony was expected to have dug. Huyghens and Roane, along with the bears and the eagle, undertake a dangerous cross-country trek to determine the status of the authorized colony. Publication history[ edit ] Other than its original publication in the March issue of Astounding Science Fiction, "Exploration Team" did not see any other magazine publication until the May issue No. The story has been anthologized at least ten times, including thrice in Italian translation one under the title "Colonia vietata" "Illegal Colony" and once in German. More detail on its publication history can be found at that listing. Reception[ edit ] Floyd C. Gale said in that the story was the best in The Hugo Winners Volume 1, praising Leinster for being able to adapt to changes in science fiction during a career of several decades. World Science Fiction Society. Archived from the original on May 7, Retrieved April 19,

Oh, and with the songs of an idol singer. It is worth noting that the fleet destroyed during the original series was not the main fleet of the Zentradi. There is no such thing, really. It was actually just one of hundreds of similarly-sized fleets that are still patrolling the galaxy locked in an endless war with the Supervision Army, who themselves are just Zentradi brainwashed by the Protodeviln. The two species are so completely alien to one another that humanity mistakes their attempts at communication for hostile attacks. In fact, the entire point of Celestial Being in the series at least before the villains hijacked it was to prepare humanity for First Contact. The whole reason for the True Innovators was so that humanity would have a reliable way to communicate with alien life, no matter how different they were. The aliens that have been murdering every human who eats chicken come down and, surprise, they look like giant chicken people. Fan Fiction In Worldwar: The Race refuse to take the offer for peace. Humans in Transcendent Humanity first discover carvings left behind by the Precursors , prompting them to unite, colonize the Solar system, and ramp up their scientific and industrial output. Eventually they make contact with other civilizations in the galaxy, and outclass them in almost every way. Defender of the Human Race , Episode 14 features the Stardroids, alien robots who do not come in peace. The Next Frontier features a Perspective Flip of sorts, as the big moment unfolds largely from the perspective of a non-human species, namely the Kerbals. The Caltech nerds and Penny are the first to make contact with "aliens" - who turn out to be from the Discworld. One of the visiting aliens is young, red-haired and attractive enough for Howard Wolowitz to forgo the usual "take me to your leader His first words to the alien visitor are Are all the women on your planet as hot as you?. Howard makes a pass at her. And when the Caltech crew visit the Discworld, a specialised aspect of quantum theory allows them to take the Internet with them. An Unseen University faculty member, given a resource allowing him at least in theory to tap into the accumulated knowledge of an entire planet, immediately asks if you can get lots of pictures of, er, young ladies, in artistic poses with urns and lengths of gauze. The Senior Wrangler immediately latches onto Internet porn. The mane theme and idea of the story is interuniversal exploration and contact, so first contact with alternate universes is a frequent occurrence. The My Little Pony Tales arc is the one that follows the mold most closely. Eventually, the tech leap that Equestria Prime makes results in a race of aliens called the Celestial Ponies making an organized First Contact. They come in peace This is one of the main plot lines. The human world is slowly gaining more magic stability and pretty soon it will be impossible to hide magic from the population outside of CHS, so the ponies in Gaia pony world and the humans in Terra human world work together to prepare for official contact and for the two worlds to become inter-dimensional allies. Sunset and Princess Twilight also have plans for when contact is made, Sunset planning to help the citizens of Terra adapt to the magic they will receive and Twilight hoping to bring technology from Terra over to Gaia. Films â€” Animation An unintentional one in Planet 51 , where the protagonist is an astronaut sent to a supposedly-empty planet only to find that he landed in the middle of an alien neighborhood BBQ party. It serves as the event that the Enterprise must prevent the Borg from sabotaging, since it was more or less what led to the creation of the United Federation of Planets. Approached in a relatively similar vein to E. The Cat from Outer Space has humans make first contact with alien In Alien , First Contact takes place between a crew of space truckers who are more interested in a percentage than diplomacy, and an H. Giger-designed horror from the beyond the stars that just wants to share a Face Full of Alien Wing-Wong with them. The closest it comes to a dialogue is when a capture alien takes telepathic control of a half-dead scientist for a pleasant chat with the President. The President asks if peace is possible; the alien curtly answers "no peace. It happens at the climax of the film starting with the sequence where the scientists try to communicate with the UFOs through music. The alien expert tries for a more peaceful second contact and invites the ambassador to Congress, where he pulls out his Death Ray again and kills everyone. It turns out the Martians are just dicks. The Day

the Earth Stood Still Also happens in the remake , where the alien craft is initially thought to be a world-ending meteorite before it slows down and lands in Central Park. The craft is surrounded by US military only for all electronic equipment to shut down, when the craft emits an EMP wave. A humanoid figure comes out, but one of the soldiers freaks out and shoots at it. A huge humanoid robot comes out to protect the alien, only for the wounded alien to stop it from attacking the humans. The alien is taken to a secret government facility, where the bullet is removed and the wound treated. It turns out that the aliens specifically grew a body that would be able to survive on Earth. After awakening, the alien named Klaatu expresses his wish to speak with the UN, but the US Government has no intention of letting him leave the facility. The film Transformers has a sort-of First Contact when the explorer Archibald Witwicky discovers a slumbering Megatron in the early 20th century. Though Megatron is kept insensate, humanity gets a technological jump start from what they learn of his workings. They learned their command of English from the Internet. Despite battling with the Decepticons in public, the Autobots are presumably covered up by the government, and they remain on Earth, in disguise, watching and protecting and waiting for their fellows to join them. District 9 handles this in a very interesting manner. The Soviet government builds a nuclear-powered relativistic spacecraft and crews it with high school kids, realizing that they would be adults by the time the ship arrives. However, a stowaway sits on the engine controls and somehow accelerates the ship beyond the speed of light. Long story short, they arrive to their destination in the blink of an eye for them, at least and encounter an alien ship. The Captain gets into a transparent dome on the hull and tries to communicate with the Human Aliens with hand gestures. They appear to understand and reply in kind. Later, the teens use a Universal Translator they brought to teach the aliens Russian in a matter of seconds. They find out that the aliens they met are the last of their race due to a robot revolt some time ago. Only those who were in space at the time escaped. The rest were "enhanced" by the machines by having their emotions removed, thus stopping procreation apparently, love is a prerequisite for sex. The humans offer to help the aliens retake their homeworld. Meanwhile, the same guy who sat on the controls who is also Wrong Genre Savvy about aliens ends up being a part of the landing party on the alien planet. While exploring a strange white column, he finds himself face-to-face with a pair of strange-looking Human Aliens with antennae and black jumpsuits. He also uses a Universal Translator to translate their whistles into Russian. He further tries to use math to communicate, but gets the formula wrong. One of the aliens corrects him and tells him "It happens to everyone. The former is a rather low-key event which is covered up rather neatly by the agents of S. The latter is a massive city-scale invasion that lets the entire world know they are not alone. What the "Odyssey" mission was meant to be meeting an unexplained space object near Titan. To say that it Went Horribly Wrong is a massive understatement. In Pixels , humans attempt to make first contact with aliens. It goes catastrophically wrong when the aliens misinterpret the message of peace as a declaration of war. Literature In Angel Station , human protagonists make a First Contact with a race of Living Ships and promptly start to trade with them. Invasion describes first contact with the Bino Faata , whose starship has arrived to the Solar System in search of new races to conquer and integrate into the Faata hierarchy. The novels title and The Teaser before cutting back to how it started are clear examples of the bad kind of first contact. Humanity barely survives the assault with tens of millions of dead all over the world. On the bright side, the Faata starship remains mostly intact. From it, humans reverse-engineer the contour drive , Deflector Shields , and Anti Matter weapons. The second novel takes place 37 years later and involves a newly-created battleground taking the fight back to the Faata. The Faata do attempt at faking the good kind of First Contact by disengaging their stealth systems at the approach of a human flotilla and offering various technological boons, including longevity treatments, cures for all known diseases, FTL technology, Artificial Gravity , etc. After a few days of not getting anywhere, the Faata decide to drop the charade and just wipe out the flotilla. Blindsight by Peter Watts invokes this. The ship Theseus Earth sends out is manned because they have reason to suspect that the event know as Firefall was initiated by aliens, who The alien scramblers which inhabit the Rorschach turn out to be hyperintelligent but not conscious or self-aware, and can only parse human languages as space-wasting cognitive viruses designed to hurt them. As the narrator puts it: Yet during their interrogations of the sole survivor of this task force, the Conquerors insist that it was the humans who shot first, and the books revolve around reconciling these conflicting reports of what happened during their

disastrous first meeting. The core of Constellation Games is the tale of what happens when modern day Earth encounters a vastly superior alien civilization, and whether everything will go horribly wrong or not. The novel Contact by Carl Sagan deals with first contact in a relatively "hard" manner. Aliens in a system twenty-six light years distant send a radio signal to Earth - a long sequence of prime numbers. This, too, is a palimpsest, and under that is the blueprints to a machine. Both Yefremov and his characters take it as extremely distasteful and, believing that no spacefaring civilization might be hostile, meet the aliens with open hands, in one of the most touching description of contact ever written. It is mentioned that humanity - perhaps just human genetic material - was transplanted from Earth to a number of nearby worlds in BC. These humans were raised in an interstellar culture while Earth itself was declared off-limits. Result; by the time Earth discovered interstellar travel, Human Aliens , or aHumans outnumbered the remaining humans or rHumans by an order of magnitude. As a method of preventing every First Contact boondoggle ever theorized, it worked. It also annihilated all terrestrial human culture. Species so treated are expected to feel an obligation to their so-called mentors who will also generally claim to have diverted comets or otherwise prevented catastrophes in the interim, whether they have or not. This practice has been banned in the past when pan-Galactic laws see Galactic Council have been upheld but tends to reappear in less civilised times. Practice variously referred to as Prepping, Lifting or Aggressive Mentoring.
