Like many units across Cannon, 27 SOCES Airmen participate in group training exercises three times a week, ensuring they maintain physical readiness alongside technical prowess. Several types of dirt and soil are kept at the shop in large piles to ensure any type or amount of soil can be provided for groundwork. Road jobs, from potholes to concrete fillings, take a group of Airmen to accomplish. One Airman will be assigned as road guard to make sure the worksite is guarded from traffic, while the others work on preparing equipment and making the filling level with the road. The process, depending on the size of the hole, can take up to 30 minutes. Welding prepares pieces of equipment used for jobs across base, and is all done in-shop. After filling in a pathway with concrete and property detailing the path to match standards or pre-existing walkways, the process takes 72 hours before people are able to utilize it. A standard concrete project takes 72 hours to complete before people can utilize it. Instead of coming in, getting my interviews and photos, then getting out and making my story, I reported for work. Not my job, but theirs. The atmosphere was different for the fact the day was September. The commander eventually broke the silence with a question: The 27 SOCES is filled with a diverse group of Airmen from around the world, each carrying their own stories written over years of experiences. All this was what I realized by the end of the morning group meeting. It kept me excited to learn more about what these talented Airmen are capable of. I was embedded with two Airmen later in the morning tasked with filling in some sinkholes around base. It was the first of many work orders handed to us to complete. Once we spent a while to complete the first task, we drove to the next site and I began spotting so many of those patches where CES Airmen had to fill in. You know that moment after buying a car that you begin to see your exact car model almost everywhere around you? What impressed me the most about their job is the sheer variety of tasks that one Airman must remain flexible to complete. Dirt sinkholes, road potholes, concrete construction, welding, snow removal. There are many jobs that I had just assumed had belonged to a specific group of Airmen whose specialty was just one of those tasks. In reality, every dirt boy must be able to complete all of these tasks. I only had spent two days embedded with this talented unit. Their shop is another vital cog in the base machine that ensures our Air Force remains as the greatest, most powerful on this planet. One hole in the dirt to the next, one hazardous road to the following one.
