The difficulty of the lipreading task What happens when someone speechreads? Importance of residual hearing Factors that affect the speechreading process Oral interpreters Case study: An exceptional lipreader Chapter 6 Speechreading Training Candidacy Traditional methods of speechreading training Developing speechreading skills Analytic speechreading training objectives Synthetic speechreading training objectives Computerized instruction Efficacy of speechreading training Case Study: Targeting training Part II Conversation and Communication Behaviors Chapter 7 Communication Strategies and Conversational Styles Conversation Facilitative communication strategies Repair strategies Research concerning repair strategies and communication breakdowns Conversational styles and behaviors Case study: A couple conversing Chapter 8 Assessment of Conversational Fluency and Communication Difficulties Conversational fluency General considerations for evaluating conversational fluency and hearing-related disability Interviews Questionnaires Daily logs Group discussion Structured communication interactions Unstructured communication interactions Case study: A school boy opens up Chapter 9 Communication Strategies Training Self-efficacy Issues to consider when developing a training program Getting started Model for training Short-term training Communication strategies training for frequent communication partners Communication strategies training for children Benefits of training Case studies: An increased sense of self-efficacy Chapter 10 Counseling, Psychosocial Support, and Assertiveness Training Who provides counseling, psychosocial support, and assertiveness training? Counseling Psychosocial support Assertiveness training Related research Case study: Where is the person in terms of adjustment to hearing loss? A road map for success Chapter 13 Aural Rehabilitation Plans for Older Adults Activity limitations and participation restrictions Audiological status and otologic health Life-situation factors Physical and cognitive variables Aura Reviews "This book provides an excellent overview of aural rehabilitation for children and adults. I have used a number of texts for teaching a course in aural rehabilitation over the last 25 years, and this is the most comprehensive and well-written text that I have used. There is excellent information and wonderful clinical case studies and examples of therapy goals, therapy materials, and therapy procedures throughout the text. The author ties together the research base in the discipline with the clinical theory and practice. The text is informative and easy to read with a wealth of information for students who are at various levels in terms of their knowledge base beginner to advanced.

## 2: Foundations of Aural Rehabilitation: Children, Adults, and Their Family Members by Nancy Tye-Murray

*A founder of the University of Iowa Cochlear Implant Aural Rehabilitation Programs, she also served as Director of Research for Central Institute for the Deaf. In addition to developing several communication strategies training programs, auditory training programs, and speechreading tests, Dr. Tye-Murray is the principle investigator of three.*

Designed for both classroom learners and as a reference for professionals, this widely-used book entwines theory with clinical practice, and presents research-based information for identifying, diagnosing, and treating hearing loss and hearing-related communication disorders. Important topics include patient-centered services, auditory training for adults and for children, speechreading, counseling, selection and fitting of listening devices, conversational fluency and communication strategies training, and language and speech promotion. Divided into sections to cover adult and child populations separately, the book distills readings into important "Take Home" points illustrated by representative research reports, case studies and anecdotes, example procedures, and lively figures. Adults who Have Hearing Loss. Assessing Hearing Acuity and Speech Recognition. Listening Devices and Related Technology. Communication Strategies and Conversational Styles. Assessment of Conversational Fluency and Communication Difficulties. Counseling, Psychosocial Support, and Assertiveness Training. Aural Rehabilitation Plans for Adults. Aural Rehabilitation Plans for Older Adults. Detection and Confirmation of Hearing Loss in Children. Auditory and Speechreading Training for Children. Speech, Language, and Literacy. Consistent organization, concise topics, and an easy-to-read writing style give readers the practical and theoretical side of every concept for a wide perspective of hearing-related communication issues and treatments. Real-life case studies and specific examples bolster the readings for a deeper understanding of the material and better classroom performance. Exemplary research findings help readers understand not only the "what" and "how" of aural rehabilitation, but also the "why." Emphasizing a "Take-Home" message for each topic helps readers focus on critical information while culling the distracting minutia. Attention-getting illustrations, interesting sidebar features, detailed appendices, and key resources noted throughout the book motivate readers to explore topics to their fullest. New to this Edition New chapters devoted to infants and toddlers with hearing loss provide a comprehensive overview of how to diagnose and treat the smallest patients and provide support services to their families. Expanded coverage on patient-centered aural rehabilitation, listening devices and technology, communication strategies and styles, conversational fluency, auditory training for adults versus for children, speechreading, and counseling. Improved organization by dividing chapters into two distinct sections of "adult and children" to help build a foundation around adult-related disorders, and then later understand the more specialized, child-related topics. New chapters on listening, speechreading, infants and toddlers, and speech, language, and literacy. In addition to developing several communication strategies training programs, auditory training programs, and speechreading tests, Dr. Her research focuses on the effects of aging on audiovisual speech recognition, discourse comprehension, and auditory training, as well as audiovisual speech processing by children who have normal and impaired hearing. The author of six books and more than peer-reviewed research papers, Dr. Tye-Murray is also a popular speaker both nationally and internationally.
