

## 1: Baixar - GARMIN GPSMAP 60C GUIA USUARIO - Manuals

*GPSmap 60C Getting Started The Main Page Sequence Whenever you turn on the GPSmap 60C, the Power On Page is followed by the Satellite Page, which is the first of the Main Pages in sequence. To view each Main Page: 1.*

Changes made from version 2. Improved support for Macintosh USB. Add visibility of paths and tracks to display on topo maps. Fixed problem where excessive track points could be recorded. Added German tide support. Added support for extended resolution maps like Minnesota LakeMaster maps. Improved Data Review page to show depth or height of structures like bridges on BlueChart maps. Corrected intermittent USB data transfer. Corrected track log filtering. Fixed transfer problem with custom waypoint symbols. Fixed shutdown caused by viewing some marine light points. Fixed problem with Indonesian Southern Grid using wrong longitude of origin. Add advanced NMEA support settings to support certain marine autopilot units. Fixed problem where the interaction with certain beacon receivers was not displayed. Fixed problem where waypoint depth was not being saved as invalid when it was unknown. Fixed problem where waypoints could not be saved in certain areas of BlueChart maps. Fixed lockup that could occur when selecting symbols for waypoints. Fixed lockup that could occur when approaching certain roads on the map. Fixed problem where compass pointer could transition to the next turn too quickly. Fixed problem with bearing being adjusted improperly when projecting waypoints with a non-zero north reference. Fixed problem in tide charts where local time axis would not match the station time axis. Changed tide stations to show selected date when saved on a calendar day. Fixed a potential problem where the wrong number of bytes could be sent for USB get requests. Fixed problem with displaying Waypoint At Destination while doing a traceback. Improved WAAS search and selection process to be smarter in its handling of multiple SBAS service providers, overlapping service volumes, and exceptional conditions. Fixed lockup that could occur when selecting a traceback point.

**Installation Instructions** It is recommended that you disable screen savers or other programs running on your PC while you go through the update process. Disruptions to the update process may render your GPS inoperable. If the transfer is interrupted, turn off the GPS and then turn it back on. Reboot your PC, go to step 9 and attempt the download again. Click on "Download" and choose to save the file to your computer. Choose a location where you can easily locate the file by saving it to a location such as the "My Documents" folder or to "C:". Once the download is complete, go to the location where you saved the file. Locate the downloaded file and double-click on it. This will launch the Win-Zip Self Extractor. This program compresses the data to allow for a faster download of the needed files. A program window will appear asking you where to "Un-zip" the files. This is by default C:. You can change this location if you like. Be sure to note where the un-zipped files are going to allow you to find them! Click on the button labeled "Un-zip". Turn the GPS on.

## 2: Garmin GPSMAP 60C User Manual

*Read and download Garmin GPS GPSMAP 60C Owner's Manual online. Download free Garmin user manuals, owners manuals, instructions, warranties and installation guides, etc.*

Changes made from version 4. Improved support for Macintosh USB. Adds support for Topo Great Britain maps. Correctly handles apostrophes and prefixes when displaying European city names and streets. Fixes occasional shutdown on highway page. Presents only relevant cities as choices given during address or intersection searches. Preserves stopwatch lap distance if user goes off of the stopwatch page. Corrects profile plot for tracks and routes that cross the Prime Meridian. Prevents long idle times during power save GPS mode. Sounds anchor drag alarm until reset by the user rather than sounding just a single tone. Shows proper units on the map page when reviewing depth contours on the map page. Changes made from version 3. Fixed problem where excessive track points could be recorded. Added German tide support. Added support for extended resolution maps like Minnesota LakeMaster maps. Improved Data Review page to show depth or height of structures like bridges on BlueChart maps. Corrected track log filtering. Corrected intermittent USB data transfer. Fixed transfer problem with custom waypoint symbols. Fixed lockup that could happen when selecting a Tracback point. Fixed shutdown caused by viewing some marine light points. Fixed problem with Indonesian Southern Grid using wrong longitude of origin. Added advanced NMEA support settings to support certain marine autopilot units. Fixed problem where the interaction with certain beacon receivers was not displayed. Fixed problem where waypoint depth was not being saved as invalid when it was unknown. Fixed problem where waypoints could not be saved in certain areas of BlueChart maps. Fixed lockup that could occur when selecting symbols for waypoints. Added warning message about removing batteries when Pressure Trend Recording is always on. Fixed lockup that could occur when approaching certain roads on the map. Made the way intermittent water areas are drawn more visible. Fixed problem where compass pointer could transition to the next turn too quickly. Fixed problem with bearing being adjusted improperly when projecting waypoints with a non-zero north reference. Fixed problem in tide charts where local time axis would not match the station time axis. Changed tide stations to show selected date when saved on a calendar day. Fixed a potential problem where the wrong number of bytes could be sent for USB get requests. Improved WAAS search and selection process to be smarter in its handling of multiple SBAS service providers, overlapping service volumes, and exceptional conditions. Fixed lockup that could occur when selecting a tracback point. Added support for xImage software. Improved track log recording in Auto mode. Increased the size of the compass pointer on the Compass page. Enabled the compass pointer to be shown while navigating a Follow Road route. Added a progress indicator when calculating a Follow Road route. Added the ability to independently show or hide entire map families on the Map Setup page. Corrected problems finding items when results contain characters with diacritic marks. Corrected a problem on the Geocache Find page where a Find By Name search could potentially highlight a point past the first correct match. Corrected an orientation problem on the Turn Preview Page if the route is calculated close to the first turn. Corrected problems with the automatic closing feature of the Turn Preview Page when using German or Italian languages. Corrected potential problems resulting from automatic closing of the keyboard. Corrected potential problem where invalid characters could be entered into a waypoint comment. Corrected contour line colors to increase visibility. Added Fuel Services option to the Find menu. Find-by-name searches now only return a list of items that begin with the input string. Added the ability to automatically close the keyboard when six or less items are in a find-map-points-by-name list. Improved map colors for contour lines and night mode. Corrected memory problem related to Follow Road route calculations. Corrected problem with certain alarms working only during active navigation. Corrected problem with saved track profile zooming. Corrected problem with find-address searches across multiple map sets. Corrected problem when finding waypoints and canceling from the Select Symbol filter option. Corrected problem with auto daylight savings so that it works for years other than the current year. Corrected problem causing an error beep after filling out a text or number field. It still modifies map colors, but separate color-scheme selections have been added for day and night

modes. Lock On Road option is no longer turned on when starting a Follow Road route. This feature is only turned on or off manually. Approaching cross-street information is available with Lock On Road turned off. Added the ability to customize the active track log color on the Track Setup page. Updated the backlight behavior so that if the light level is off, then it will be set to the user mid-level when the light key is first pressed. Corrected a problem with waypoint position averaging when upgrading to new firmware. Changes made from version 2. Added speed-filtering feature to the Marine Setup. Added Pedestrian and Bicycle modes to the Follow Road options. Added vertical elevation profiling for routes and saved tracks for use with future MapSource products. Added support to automatically turn the backlight on if external power is connected. Added a Remove All option to the Recent Finds page. Added nautical miles as a unit by which to project a waypoint. Enabled the Active button on the Route List page to work with all route types. Enabled the Active Route page to be in the main page sequence if navigating an on-route GoTo. Corrected a problem with calendar memory that caused records to become unavailable temporarily. Corrected a problem with the calendar Remove All option that caused points associated with days in the future to not be removed. Corrected a problem that caused elevation data requiring five digits to not display correctly. Corrected a problem that could cause a route to be deleted while editing it on the map. Corrected a problem where duplicate exit roads could not be selected. Corrected a highlight problem when searching for user waypoints by name. Corrected a problem where elevation for a user waypoint could be rounded incorrectly. Corrected a problem that could cause valid intersections to not be found. Corrected a problem where some addresses in Europe could not be found when the scope was reduced by selecting either a city or country. Corrected the drawing of Follow Road routes in some roundabouts. Corrected the drawing of European tide charts. Installation Instructions It is recommended that you disable screen savers or other programs running on your PC while you go through the update process. Disruptions to the update process may render your GPS inoperable. If the transfer is interrupted, turn off the GPS and then turn it back on. Reboot your PC, go to step 9 and attempt the download again. Click on "Download" and choose to save the file to your computer. Choose a location where you can easily locate the file by saving it to a location such as the "My Documents" folder or to "C: Once the download is complete, go to the location where you saved the file. Locate the downloaded file and double-click on it. This will launch the Win-Zip Self Extractor. This program compresses the data to allow for a faster download of the needed files. A program window will appear asking you where to "Un-zip" the files.

### 3: GARMIN GPSMAP 60C OWNER'S MANUAL Pdf Download.

*The GPSMAP® 60C and GPSMAP 60CS are all-purpose units "packed with exciting features and delivering the kind of color that consumers want in their handheld GPS devices.*

When navigating a route, the Active Route Page is also displayed. At the top of each page, a Status Bar provides current status information for several unit features: Power source batteries or external power, satellite signal status, backlighting, alarm clock, and USB connection. The Satellite Page shows a sky view array of the satellites overhead with your position centered in the array. The outer circle represents the horizon and the inner circle a position 45 degrees from the horizon. The numbers displayed indicate the number assigned to each satellite. A bar graph at the bottom of the page displays the strength of signals from each satellite. When the receiver has signals from at least three satellites, the display at the top of the page changes to indicate position accuracy and location coordinates. It displays a detailed map of the area surrounding your current location. You can use the Map Page to do the following: Determine your current location and progress while moving. Select and save a map point as a waypoint. Locate and navigate to map items by following a route displayed on the map. Customize the map display to your requirements. Through the Map Page Options Menu, you can change the display of a variety of information for navigation. You can stop navigation to a destination, arrange up to four data fields to display the type of navigation information you desire and include a navigation guidance text message on the map page. You can select the type of data fields to display. You can change the way the map displays items by selecting your own settings for text size, what items are displayed and more. You can display the distance from your current location to other locations on the map. You can reduce the amount of map clutter to increase the visibility of roads and other geographic features. When navigation is in progress, the Compass Page provides navigation data and directions. It uses a graphic compass display and bearing pointer along with digital data fields to display information such as current speed, distance to the next point on the route, estimated arrival time, etc. You can choose from three or four data fields and select the type of data displayed in each from a list of options. The Compass Page Options Menu is where you can stop navigation, switch between "course pointer" and "bearing pointer," and customize data fields to display the information that you want. The Trip Computer Page provides you with a wide variety of travel data useful when navigating a long distance. It indicates your current speed, average speed, trip odometer and many other helpful statistics useful for navigation. You can customize the Trip Computer display however you want it, with a list of data options to choose from. The Mark Waypoint Page allows you to mark and record your current or any other location as a waypoint and displays a name and a symbol for that waypoint. You can mark your current location at any time. MOB is where you want to mark a location while on the water with no available reference points and come back to that point later. Also, you can project a waypoint from any map item and establish a new waypoint that is a certain bearing and distance from that map item. If you have downloaded MapSource mapping data that contains additional map detail, you can search for points of interest, addresses and intersections. The Main Menu is the directory for all unit features not in the Main Page sequence with the exception of Mark Waypoint and the Find Menu, which have their own keys. The following features are on the Main Menu: Tracks - allows you to maintain a record of your movements. Routes - allows you to create a list of points that you wish to navigate to. Highway - a graphic representation for navigating. Setup - controls the settings for most of the features. Proximity - activates an alarm for a defined radius.

## 4: Garmin: GPSMAP 60 Updates & Downloads

*Garmin Express Maps and software to manage your devices; Manuals for GPSMAP® 60CS. Manual Name Revision Revision Date.*

Above pictures are NOT to scale but show the different screen resolutions and presentation methods of the three models. The actual size of the GC screen is 1. ALL of the screens are about the same physical size, but our pictures from different times using different screen dump programs fail to show this. Resolution suffers when we tried to make them all the same size as we no longer have the original images to work with. There are even a few rural areas where the old Metroguide 4 maps have more detail and accuracy. All of the added memory in the GC is internal as opposed to a removable cartridge. The older serial port type cable is NOT included. You will need the serial type cable if you want to provide external power to the unit or use its NMEA serial output. Also screen captures can be downloaded with either USB or Serial. Street Atlas 4 thru 9 can upload waypoints and routes, download tracks, but cannot download waypoints or routes from the unit. Proximity waypoints are also supported with the beep alarm. The screen backlight can be made quite bright. Probably among the brightest we have seen. Our estimate of battery life in the Normal Mode for the GC with alkaline batteries is approximately 27 hours continuous based on 70ma battery draw and a mah typical AA alkaline battery life at 70ma. We measured 68ma in both the Normal and Battery Saver modes, because lock is required for the Battery Saver mode feature to kick in. With the backlight set to brightest, the unit draws ma about 14 hours of life. In the Indoor no GPS lock mode, the unit draws only 40 ma and should run for 45 hours. We are going to try something new in explaining the features of the GC. The number of option screens is quite large and the some features are somewhat obscure and difficult to find. The "highway display" useful for marine applications is substituted by the above pointer which can be changed from a Bearing pointer to a Course pointer. The Course pointer calculates a fixed line from present position or a routepoint to the next routepoint. The "To Course" command directs one immediately back to the course line. NOTE that the Bearing pointer is not the direction of the course line which remains fixed. Daylight viewing color screen with lower current backlighting for night viewing. A fixed Helix Antenna instead of movable, and only a vertically-oriented screen. Lower battery drain gives about 27 hours life on just 2 alkaline AA batteries -more than the G-V with four batteries. The GC has a user programmable message for the initial Welcome Screen. Not all functions are available on both cables. The GC has the usual automatic daylight savings time for the US plus some "Other" selections for the world. The GC has unique features for GeoCache users. The GC has a quick disconnect belt hook assembly which can be removed by unscrewing. The GC has 50 reversible routes, 10, track points with TracBack and waypoints with many new graphical icons. European, Australian, and South African Maps are also available. CitySelect5 and CityNavigator5 we judge accuracy to be "good to excellent". MetroGuide 5 maps are better but do not offer autorouting in the GPS. All consumer GPS vendors have the same limitation for their respective units. Additional features of MapSource uploadable maps are discussed below. The GC is a superior product overall. The GC is a general purpose unit equally at home hiking or on the highway and useful in casual marine applications. The "OFF ROAD" mode provides the standard Garmin circular compass display that we like for hiking and marine use and other GC features make the unit quite suitable for hiking activities as well as on the highway use. We found the battery life excellent and the longest we have seen with a color screen and especially with just two AA alkaline batteries. The GC antenna is sturdy and the overall construction appears robust and this unit should be as waterproof as any other Garmin unit. We have not tested this configuration. There is not a lot to complain about with the GC. It packs a lot of functionality in a small package. The unit has so many different pages we sometimes got confused at first as to what setup pages we were looking at.
