

1: Garmin Nuvi W GPS Review

Garmin nÅ¼vi Pdf User Manuals. View online or download Garmin nÅ¼vi Owner's Manual.

Tim - November 14th, Hello: Am a GPS-know-nothing primarily interested in finding a unit that will allow me to find rock-hound locations out in the southwest states desert areas. Most rock-hound guide books provide GPS coordinates for popular hounding locations, but I have seen no discussion regarding entering coordinate numbers into a GPS unit. Presumably there are units that allow such. Charles Moore - November 15th, Most auto devices will allow you to do that one way or another, although the steps are not often all that convenient. And some models will just refuse to route to an off-street address completely. But you could do that with this device. Tim - November 15th, Tim, I am ready to purchase either the Garmin nuvi w or the Both are available and comparable in price. Which would you recommend? Tim - November 16th, Tim and Charles; Fortunately,the W routes to coordinates nicely, even if no road is there. It even gives one the option to specify the format in which to input the coord. But, common sense should take it from thereâ€¦one hopes. Bill - November 16th, I understand what you are saying, Bill. My point is that if you have never been to those coordinates before you might not know the limitations of fences or other obstructions. As an extreme example I had a set of coordinates I was trying to drive to once. The Nuvi happily picked a spot on the nearest road to take me to, but unfortunately the nearest road to those coordinates was on the opposite side of a canyon from where I really needed to be to access the coordinates. It took a 70 minute drive to get back around the other side. I think this unit will work fine, based on your input, for my purposes. I would use a combination of maps and the books, and a GPS to confirm my directions. Charles - November 16th, Hi, I purchased a Garmin W for my husband who does a lot of driving in unknown areas. Many times we would prefer to do all highway driving, rather than back roads. Is there anyway to set the Garmin up to always use highways? IS anyone else experiencing the same sort of problems? Tim - November 16th, Hi Tim, I am happy with my w. I have read a few comments about problems getting satellites. This may be really off, but since it says clear area, does it matter if you just hold it out of the window for a min. Also I have the beanbag, but I purchased the black leather holder that folds open. I have an area in my dash, like a small glove compartment and it fits right in there, in the case. The on off switch is open to you and of course the screen is protected around it with the firm leather. You can just take this whole case with the Garmin inside and set it anywhere in the car. Thanks for you info. Shari Shari - November 17th, Tim, Is there a difference between the and the W or the and the W other than screen size, Qwerty keyboard? And the screen size, are the graphics larger or does it show you more left and right of your route? Karol - November 18th, I am extremely happy with the W Nuvi that we ordered [snip, see comment policy]. Franco - November 24th, Tim - November 24th, Tim, I am looking at some fantastic sales and the W and the are the same price. Iris - November 25th, One more thing, I wanted to look into geocaching and I was wondering which would work better as a portable walking unit as well? Thank you very much! Iris - November 25th, Iris, if you need Multi Destination Routing go with the , otherwise go with the w. Tim - November 25th, I am sitting here looking at the wâ€¦but also considering the tw. Would you recommend just getting the w instead? Tim - November 29th, After reading all of the comments regarding the Nuvi W I decided to purchase one. What is your experience with the Mobi universal GPS vent mount. I have a dash protector in my car and do not want to remove it. There are still restrictions though such as it has to be within so many inches of the bottom corner. Is it worth upgrading? Any downside to the in terms of complexity? Lauri - December 1st, Hello, I am newbie so bare with meâ€¦me and my brother purchased a Garmin w this past weekend. He wanted to know why they are different when we purchased them at the same time, store and model number w? Tim - December 2nd, Thanks Tim for the quick response. I need your recommendation. Are they both easy to place or mount on dashboard? Nin - December 2nd, I just bought a w. I put in a final destination and then put in three way-points. The way-points were all flagged and the total mileage was computed. The has more, but the Wseems better overall. Any thoughts or advice to give? I sent the directions to the sd card,and also sent it straight to the unit. Barry Poindexter - December 11th, Barry, the series devices do not support importing routes. You can only do that on the series and up. Price difference is

not significant. In other words, is the technology any different, does the W offer anything in performance that the w lacks? Thanks in advance for any comments! very informative site! Dick - December 12th, Tim, Great information. I recently purchased a W and love it. Am I missing something? I have narrowed down between the w and w. What are the differences and which one is best? I like the 4. I know that it only allows 1 viapoint that will not work for what I need but is there a route planning or some other option that allows you to choose the route in advance? I would really appreciate your advice. Vicky - December 13th, I am looking into buying a GPS device and I am curious to know if there are any ancillary costs that I should be aware of. For example, is there a monthly fee for using the bluetooth capability, for updating maps, etc.? Also, is there one company that is better priced with respect to these services? Any advice would be much appreciated. I am writing from Canada. Web â€” Yes, despite having over 40 models of Nuvi devices, Garmin is known to change the specs of a model mid-production. Makes my job tough. Check out the series instead. Other manufacturers are similar. Tim - December 14th, I have been looking for a GPS unit for my extremely directionally challenged wife. I need a simple, accurate and well built unit, no Blu Tooth, MP3, something hi-tec but not too complicated to use. I am leaning towards either the Garmin w or the Garmin w. Which would you recommend, or what other would you suggest. Tony Marsh - December 14th, I work in real estate and often will have to travel to several different houses during any given day. I need a GPS that I can program in itinerary in. Would I be able to do that with the w? Is the only difference between the two the traffic and widescreen? And which would you suggest? Shannon - December 16th, Hi Tim: I received the Garmin W and W both as gifts and one I will return. I was thinking about keeping the W simply because the model number is later and usually a larger model number means newer or upgraded. Which has better, perhaps more features? Linette - December 16th, The w is the newer model and offers a few more small features than the w. Tim - December 16th, Great website! I have my selection down to two units, the nuvi w and the w. My specific question concerns the mounts. Is it practical to take off the windshield or dash mounts each time, or should I spring for the friction mount? Clint - December 17th, I agree, go with the w.

2: User manual GARMIN NUVI W - Download your GARMIN NUVI W user guide or user manual

In addition, nÅ¼vi accepts custom points of interest (POIs), such as school zones and safety cameras and lets you set proximity alerts to warn you of upcoming POIs. Take It With You Like the rest of the nÅ¼vi series, nÅ¼vi sports a sleek, slim design and fits comfortably in your pocket or purse.

It is simple, elegant, easy to use, helpful, and effective. The roads in Seattle are laid out far differently from what I was used to in Texas, and this makes navigating them a breeze. No more need to print out maps or get directions to places with this little fella on board or write down my unique Driving Direction Syntax. And maybe best of all, the user interface is surprisingly simple, elegant, and effective. In my opinion, when it comes to GPS less is more. But what it does have is it just works, is reliable, super easy to use, and looks nice with a streamlined workflow. Here are my notes on the various Garmin nuvi models: The wide screen also takes more room if mounted on your front windshield and looks overly geeky IMHO. It includes all 50 states and Canada unlike only the 48 covered by the and speaks the street names unlike the , or Dawn likes the fact it speaks the street names since you can navigate while driving without needing to look at the unit and possibly getting distracted , you can just listen to it. Their hardware and software are older too, the series are slimmer, more rounded, and have noticeably more modern software. They typically include traffic alerts and rerouting which according to reports is more frequently vastly inaccurate than helpful. Garmin has the best maps hands down in the US. The POI points of interest database is invaluable!! This is truly a beauty of the unit, it is just very easy to use. Garmin focuses on the basics without too many features to clutter up the interface. The software UI is beautiful. Rounded corners, smooth maps, a cute little car icon, it comes across as user friendly, not overly technical like many other GPS units. It focuses on vehicle navigation so you can set a single destination. Consider one of the Garmin mapping handhelds or for training on a bike, the Edge series are cool. It does a good job protecting the unit. Having the case right under my dashboard to slip the Nuvi into I leave it unzipped not only protects it and keeps it clean, but also prevents prowling eyes from noticing I have a GPS unit in my car. New 2x5 Series Just Released Garmin just released a new line of 2x5 series models. The model looks particularly promising. The new software looks nice. It may be worth trying one of these new units out. Never yield using your own brain over to the luring mindlessness of following your GPS unit. Case in point, a bus driver in Seattle blindingly followed a GPS route under a bridge that was far too small for the bus and copped the roof off Seattle PI article. Or like my cousin who travels for his job and "lives by his Nuvi ". If another street looks better, take it.
